ANEST IWATA FRANCE

© 2022 Anest Iwata Strategic Center S.r.l. All rights reserved.

Location	Pavilion 1, Alley C, Booth n° 066
Product name	WS400 LS400 SERIES 2
Brand	ANEST IWATA
Market(s)	Light vehicles
Launch date	06/2022
Preview of new product	Nationwide, Europe, Worldwide

Description

Premium range of sprayguns with digital pressure gauge, integrated into the gun handle. The SR2 Digital range consists of WS-400 for wet on wet basecoats, LS-400 for basecoats and WS-400 for Clearcoats. Each is available in several ranges of nozzles, to adapt all application products on the market.

The chrome body with black PVD treatment allows a high resistance.

New air valve optimize airflow, for better application performance.

And the DPG-1 integrated digital pressure gauge, unique in the world, can be detachable in just 1 second and provides goldsmith precision!

Description

Latest generation UHS acrylic air drying clear coat designed for any type of repair either by surface to be painted or application temperature thanks to its 3 hardeners.

The innovative resins of its formulation, reactive to ambient humidity, allow a guaranteed dynamic deep drying, allowing high loads of material without affecting the final cure, providing a deep shine of great sharpness.

Its low viscosity and elasticity control additives give it great resistance to sagging, also guaranteeing excellent resistance to aging and wear.

Description

Grey and black 2K textured with a very good physical, mechanical and adhesive resistance without primer or adhesion promoters for plastics and a homogeneous and original textured finish. Its hardness to friction and deterioration should be highlighted, given the exposure and environmental impact suffered by these components.

It is used in the automotive finishing sector in components such as mouldings, bumpers, footrests, etc., with direct adhesion on plastics. The product adheres directly to the plastic substrate without the need for priming or flaming.

Product name

**Santint AC100 Automatic Car-refinish
Paint Dispenser**

Brand

SANTINT

Market(s)

Light vehicles

Launch date

03/2022

Preview of new product

Nationwide

Description

AC100 has been designed to make life easier for the body painter. It offers workshops an unequalled colorimetric performance thanks to its unprecedented precision in the dosage of raw materials. With advanced features and a touch screen, the innovative Santint AC100 handles paint storage and preservation, and the precise selection and dispensing of different ingredients to achieve the exact color formula prescribed by the spectrophotometer.

The Santint AC 100 sets a higher standard for the refinishing paint market with its multiple advantages:

- Simplicity of use thanks to its 100% automated features and touch screen.
- Micro-precision tinting: the automatic computerized tinting system guarantees a precision of 0.015 ml (equal to 1/3 of a drop of water) for each dispensing to obtain the desired color.
- Access to over 2.4 million shades when the Santint AC100 is used with CarCoating Solution's

colorimetry software. A feat that offers a multiplied productivity and an unequalled efficiency!

- Speed and versatility: the Santint AC100 doses colors much faster than manually (150 ml/gram in 2 minutes). Each dose is recorded (thanks to the scale) and is 100% reproducible.
- Saving time, money and raw materials: while the machine is mixing, the body painter can perform other services and increase the profitability of the workshop.
- Patented 100% recirculation technology. This means there is no purging and no residue. This guarantees clean work all year round.
- An integrated automatic cleaning system and a design that does not require much space in the workshop.

According to the manufacturer's data, the Santint AC100 saves 30% in paint and 50% in labor.

Product name

PHILBOX by Santa Cruz

Brand

SANTA CRUZ

Market(s)

Light vehicles, Electric or hybrid vehicles

Launch date

10/2022

Preview of new product

Nationwide

Description

Our PHILBOX is the first multi-purpose fast repair paint booth (single or double station) where not only urban collisions but also small damages (scratches, door knock marks on body car, vandalism) can be repaired from the beginning to the end of the complete repair process. It can also be used as a traditional paint booth.

It includes : an integrated laboratory (painting machine, spectrometer, gun washer), an integrated micro-cabin, a central vacuum, a repair area (tools, Paintless Dent Repair accessories (PDR), a touch screen that offers the possibility to be connected to quotation software as well as to DMS one to simultaneously access repair order forms and workshop sheets, as an example, and allows the operator to view E-learning videos, tutorials to get a better understanding throughout the repair process).

Its ergonomics means increasing productivity by reducing the multiple car and operator movements from one workstation to another. No need to move the vehicle during the repair process : from

disassembling-reassembling, straightening (using PDR method), preparing and painting stages to finishing-polishing (dust and fittings) ones, all these different steps are carried out at the same place.

Owing to its integrated micro-cabin, one component part can be painted (hood, door, wing, rim etc.) while the car is being repaired in order to improve operator's productivity.

Our PHILBOX is a micro workshop which really makes the difference in creating an independent and autonomous fast repair work flow.

In an ecological approach, two waste sorting bins are installed in the repair area and two other ones in the paint laboratory.

Description

Our TOOLBOX is the first multifunctional trolley that allows you to go through all the different steps from disassembling to preparation before masking and then painting in the paint booth.

Its ergonomics means for the operator to avoid many unnecessary movements from one workstation to another in order to optimize productivity.

Powered by compressed air energy and 220 V electricity, it can supply power to the nail puller, central vacuum cleaner, glue gun, UV lamp, hand lamp, portable tools etc.

With its touch screen, it offers the possibility to be connected to quotation software as well as to DMS one. Thus, during a repair, the operator can simultaneously draw up an estimate and a list of parts, for example. The operator can also view E-learning videos, tutorials to get a better understanding throughout the repair process.

Equipped with usual disassembling and straightening tools : hammer, nail puller, Paintless Dent Repair

accessories (PDR), central vacuum cleaner, sander, UV lamp, polisher for the finishing touch.

It can hold sufficient sandpaper, degreaser, body filler, primer, to work the whole day.

Thanks to its UV lamp technology for body filler and primer, it is both an efficient and economical solution.

Specific storage compartments for PPE : nitrile gloves, dust masks, protective goggles, provide good working conditions and enable the operator to have everything at hand.

Sagola SMART Repair Kit

The Sagola SMART Repair spray equipment kit contains all essentials for SMART automotive repairs. Included are two of the groundbreaking Sagola Mini Xtreme spray guns taking the SMART repair industry by storm due to their lightweight and performance. The Sagola Mini Xtreme offers the painter a mid-sized spray gun capable of spraying a 260mm wide spray fan – making it ideal for painting complete car hoods, doors and vendors.

The Sagola MiniTech air cap transforms this spray gun into the ideal work tool for precise SMART repairs like alloy wheels, door and stone chips, and complex fade-ins.

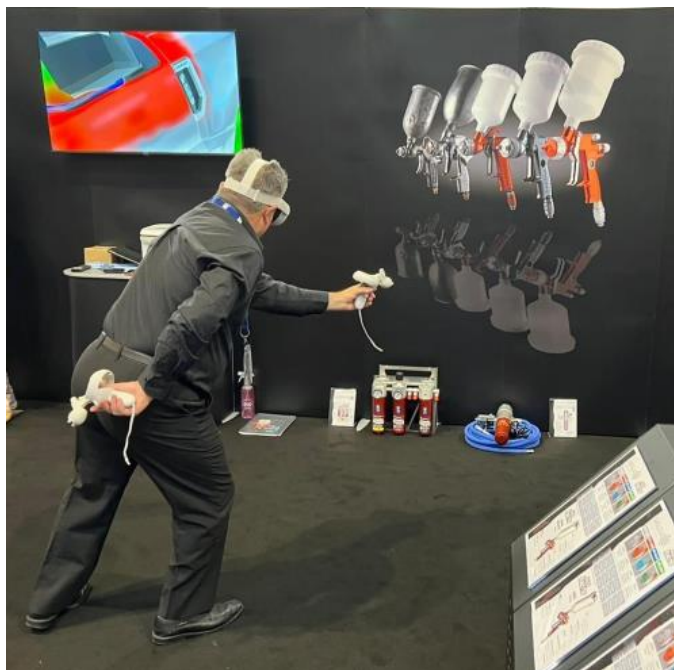

The Sagola SMART repair kit is ideal for busy body shops and mobile SMART repairers.

Description

OPTEX™ body filler and putty products change color from pink to green, letting the body shop technician know the repair is properly catalyzed and ready to sand. Whether you're repairing large or small dents, OPTEX takes the guesswork out of the application process, saving body shops time and money.

APPROVED SUBSTRATES:

? Steel

? Stainless Steel

? SMC

? Fiberglass

- ? Galvanized Steel
- ? Aluminum
- ? Sanded OEM Paint
- ? Silicon Bronze Welds

NOTE: For structural repairs prone to high degrees of stress and flexibility, use a fiber reinforced filler such as Everglass®, Kitty Hair® or Fiber Tech® Spreads easy and virtually eliminates micro-pinholes

Uses traditional Evercoat cream hardener mixed at a 2% ratio

Excellent adhesion to steel, stainless steel, galvanized steel, aluminum, SMC, fiberglass, and silicon bronze welds

Contains patented ECORESIN™ technology for superior sanding properties.

Rage® OPTEX™ is the world's best sanding body filler. Its unparalleled sanding qualities are a result of the patented EcoResin™. Rage® OPTEX™ uses a new patent pending color change technology that optically transitions from pink to a light gray-green. Its non-sag formula has excellent filling properties, while eliminating the need for finishing putty. Rage® OPTEX™ is part of the Metalworks® system.

Description

The unique ANGOS ARG-B 200 cordless grinder is the first battery-powered grinding tool from Mirka. It can be used with a variety of accessories in grinding and sanding metal, cleaning after welding, surface conditioning, cutting and deburring and paint removal. Fit it with abrasive brushes, quick lock discs, hard metal burrs, file wheels or cut off wheels to do work in places where bigger tools reliant on hoses and cables cannot go, in working positions you are free to choose.

The wide 2500-20000 rpm adjustability of tool speed makes the ANGOS ARG-B especially suitable for a wide range of jobs, together with its light 890-gram weight and comfortable, balanced and ergonomic design. The Mirka ANGOS is supplied with two 5.0 Ah batteries to reduce downtime to a minimum – just swap a fully charged battery on to continue working. Featuring Bluetooth® low energy technology, the

ANGOS can be paired with a wide variety of devices, supporting the monitoring of exposure to vibration.

Launch date	02/2022
Preview of new product	No

Description

The ceramic grains of Galaxy are engineered to stay sharp, as new abrasive edges are formed when they break down during the sanding process, enabling Galaxy to continue cutting – from edge to edge. The blue ceramic grains retain sharpness exceptionally well, giving Galaxy a long life and a fast cut. The scratch pattern of finer grits is especially easy to polish out.

Galaxy utilises Mirka's new Multifit concept for hole configuration. With Multifit, the abrasive can be placed on any machine without the need to specifically align it, thanks to the optimised hole placement. With superb edge wear resistance, the universal Multifit hole configuration enables a perfect balance between long life and optimal dust extraction.

To counter clogging, the Mirka Galaxy has a special coating for efficient dust repellence. In addition, the new Multifit hole configuration features specifically alternating hole sections and grip areas to direct and channel the dust away from the sanding process.

The film backed Mirka Galaxy range is available from coarse 40 grit to fine 2000 grit for post paint and blending. At its core, Mirka Galaxy is a multipurpose product, ideal for sanding both soft and hard materials as well as various substrates thanks to its excellent clog resistance and dust extraction.

Description

Mirka is introducing a new way for you to take control of your workshop. The new Modular Trolley from Mirka answers to your specific needs: it's as basic as you need or as fully loaded as you want.

With the new Mirka Modular Trolley, you can keep the working area organized and clean for a professional and efficient workflow. Thanks to its customizable modular design, it is easy to accessorize the sturdy trolley to suit your workshop and line of work. You can start with a clean sheet and upgrade it as you go, or specify a fully equipped version with everything ready, just waiting for the work to begin – or mix and match.

Below the rubberized workbench desk, available lockable soft-close drawers keep your equipment safe,

secure and easily accessed, with space for compound bottles and supplies and adjacent holders for spray guns and aerosol cans. Dedicated outlets give you optimal access to fitting electrical and/or pneumatic tools, with space for the dust extractor. Tool, hose and waste bag holders keep everything organized, together with the tool board that can be fitted with movable shelves and hooks. An easily adjusted and secure hose arm and machine hooks keep hoses and machines neatly placed so you always know where they are.

Crafted according to your needs and easily upgraded, you can customize the new Mirka Modular Trolley the way you want, to be one of your best and most reliable work mates, never far from the action and always up to the task.

Description

New power tool for bodyshops and manufacturing, the Mirka® Pneumatic Belt Sander is an ergonomically designed and a low vibration sander for narrow belts.

The Mirka Pneumatic Belt Sander is the optimal tool for grinding welding spots and seams in vehicle or marine manufacturing and body repair and for removing paint in body shop work and collision repair. It works especially well together with Mirka's new line of narrow sanding belts.

The two available models, the Mirka PBS 10NV and Mirka PBS 13NV have been designed with the user in mind, focusing on ergonomics and usability. The tool is smooth and quiet to use, comfortable to hold with a handy rubber grip, and its grinding speed is easy to set with a top-mounted selector. The belt is easy

to change thanks to the tension mechanism, and the arm angle is quickly adjusted with a key that is stored in the handle for whenever it is needed.

Description

RestorFX is a polymimetic surface regeneration technology that redefine automotive reconditioning with a paintless solution (PCR : Paintless Clearcoat Repair)

Nothing compares in terms of results, speed and cost.

RestorFX is not a wax or another cosmetic product, between bodywork and poly-polishing, RestorFX is an innovative technical and chemical process for the deep reconditioning of paint clearcoat by chemical fusion and self-curing which gives your vehicle a brand new look.

Unlike traditional methods such as body painting or poly-polishing which generally do not allow you to recover from your investment during the sale of the used vehicle, RestorFX regenerates the clearcoat which has been damaged, eliminated or covered up in time and brings back added value to the vehicle by restoring its original shine and offering a real "wow" effect, thus making it possible to upgrade the entire vehicle.

This innovative technique is accessible to any type of profile following an intensive 5-day training.

Both intended for professionals (Concessions, Merchants, Refurbishment factories, etc.) and individuals (RestorFX Centers), the RestorFX concept is positioned as a new solution accessible to all.

Description

The advantage of our compressor is the stellar geometry that allows air to be compressed by involving the cylinders alternately and not simultaneously. This allows the energy power to be split and a speed variator to be installed in order to reduce the energy consumption so that it is proportional to the amount of compressed air required. The compressors on the market, for the production of the same quantity of compressed air, use greater engine power, increasing energy consumption.

The second advantage of this compressor is the absence of oil for lubrication of moving parts, classifying it no longer OIL-FREE, but OIL-LESS.

In addition, it is possible to install a nitrogen generator on board the machine. Stellar technology makes it possible to produce nitrogen at a lower cost for applications that require nitrogen purity of up to 99.5% or 99.9%.

Description

BATTERY PULLER, the new lithium battery spotter developed and patented by Telwin, is suitable for all steel sheet straightening operations.

The BATTERY PULLER is cordless, handy and powerful, making it an indispensable tool for those who want to be more efficient in bodywork with a considerable saving in time and money.

Powered by a lithium battery, the BATTERY PULLER is cordless, giving the user great freedom of movement in the bodyshop to work where it is needed and without being restricted by the power supply.

With a replaceable and rechargeable LiPo4 lithium battery, continuity of operations is ensured by virtually infinite autonomy. When the need arises, the battery can be quickly replaced.

The BATTERY PULLER has a built-in mass (sheet metal cleaning range 20 mm) and develops a power of a conventional spotter (2800 A) at only 2.3 kg weight.

The BATTERY PULLER is fully operated by a built-in digital control. The spot welding time can be changed based on the work to be done. Therefore, special accessories can also be used, such as the accessory for welding slotted washers.

The elegant and ergonomic design makes the BATTERY PULLER very handy while providing a secure grip

in all working positions.

Complete with: Power supply, battery, plastic professional carry case.

Description

Alloccasions provides a unique and all-in-1 digital solution for used vehicle professionals, designed to optimize, simplify and secure used vehicle management activities while providing more transparency to the customer. Alloccasions is a technology developed to meet the new challenges of automobile retailing.

Our solution deliver an exhaustive report of the vehicle which includes and integrates all the connected data to the car and its maintenance history in order to sell it with the maximum of transparency and reliability towards the customer.

In order to achieve such a challenge, we rely on innovative technologies combining artificial intelligence in damage detection and image processing, refurbishing encryption algorithms, a comparisons of vehicle price proposal for sale on the market, and much more. ...

Our solution brings together the existing digital solutions available on the market (best of breed), while providing new solutions such as obtaining the history of the vehicle in order to provide an all-in-one solution.

All this include in one single report provided in white label and stored on a blockchain in order to obtain information securely and reduce scam.

Our solution widely open the way to a multi-media history of vehicles in cross mode of the company NV, UV and After sales for the maintenance service of the vehicle sold.

Description

Talking to our customers, we understood that determining the fair market value of their cars was a serious pain point.

Willing to address their needs in the best way possible, and based on our data analysis capabilities, we started to develop the tool after the launch of our AUTO1 EVA App at the end of Q3 2020. After collecting excellent feedback on the reliability and the speed of the Price Indicator, we fully rolled out the feature in early Q1 2021.

AUTO1 Price Indicator supports automotive professionals in determining the fair price of their cars, trade-ins included. It is available for free through AUTO1.com, with an account, and AUTO1 EVA app (iOS, Android).

After inserting the VIN and very little information via the AUTO1.com platform or his smartphone, AUTO1.com analyzes its data to indicate a reliable price to the professional within 5 minutes. AUTO1 is able to automatically price cars based on data sciences and algorithms: the price calculation is based on the current market trend with the daily auction trend in 30 countries as well as on the analysis of data from more than three million transactions, recorded on the B2B platform for used cars in Europe,

AUTO1.com

If the professional wishes to remarket his used car, this information can be converted into a full evaluation to put the car on our platform and sell it within 24 hours, optimizing the dealer's inventory days. The vehicle will be available for sale in just a few clicks from a European network of more than 60,000 partners in 30 European countries, allowing him to benefit from the best prices.

The price indicator tool is currently available in these European countries: Germany, Austria, France, Italy, Spain, Portugal, the Netherlands, Belgium, Luxembourg, Sweden, and Poland. The solution is available free of charge to all registered professionals on the AUTO1.com platform.

Description

Let's imagine a system that allows an insured person to be an actor in the management of a car claim, to be compensated very quickly, and at the right price.

Let's imagine a system that guarantees a repair order to a repairer, immediately after he has sent his estimate. This system is called BigMax, a platform of cognitive services available in API, respecting all the structuring stages of an automobile expertise : identification of the vehicle, recording and imputation of the damage, determination of the repair methodology, evaluation of its value before loss, detection of the dangerous elements on the vehicle and orientation towards the right insurance course.

BigMax is based on a modular architecture, which can be assembled like Lego to create new digital paths (MAX). Beyond all the deep learning, machine learning and massive calculation methods used, the innovation also lies in the fact that BigMax automatically creates the expert data.

Context :

Digital players are shaking up the insurance market, each offering their own vision and approach to digital claims management. BCA Expertise sees its "traditional" claims management being challenged by

these new approaches.

In a world where individuals are accustomed to ever greater responsiveness, accessibility, service and competitiveness, the "traditional" claims management model is showing its limits.

BigMax is a response to this changing need. It is the assurance for BCA Expertise to master its value as a trusted third party in the field of digital claims management, thanks to its 3 basic services which ensure the real-time sharing of information between all the players involved in the claim: MAX Gré à Gré for the insured, MAX Devis for the repairer, MAX EAD for the expert.

MAX Devis carries out, for repairers, the control of estimates, recommends the use of re-used parts, parts from the circular economy. It limits the back and forth of estimates and increases the speed of settlement of claims.

Description

Demand for reconditioned vehicles is considerably increasing!

Therefore, major groups have created their own labels as a strategic priority, with quality commitments that require uniform standards to be applied.

In this increasingly professionalised market, groups need to control lead times and costs and to offer an identical level of finish at all their sites.

Reconditioning centres have now sprung up to serve the market in France and the rest of Europe. They are designed to manage and control all the issues that arise in vehicle preparation, including the reconditioning of used vehicles.

The cost to the dealership of immobilising a used vehicle amounts to an average of €16 a day, so it's a race against time to achieve the fastest and most efficient turnaround, including transport to and from the centre!

Like a digital nervous system, MecaPlanning Factory analyses, manages and prioritises tasks to continuously optimise both production and administration.

This completely innovative tool interfaces with all the factory's systems and adapts to all its processes

to deliver a digital control room that can track all the stages of vehicle preparation, synchronising the activities of everyone involved.

MecaPlanning Factory automates every stage of the reconditioning chain, from registering the vehicle in the dealership's UV management software and generating the factory transport order, to publishing advertisements on sales websites and returning the vehicle to the dealership.

MecaPlanning Factory cuts lead times by 75%, resulting in a 10-day cycle rather than 40 : saving on storage costs, increasing profitability and enabling its tracking and guaranteeing quality standards and reducing returns under warranty.

Launch date	01/2021
Preview of new product	No

Description

Carflex launched "autoMOBILE", a mobile application for body shops customers, during COVID restrictions.

The first goal was to limit people coming in body shops allowing customers to take pictures of their vehicle damages remotely.

This application allows body shops customers to take photos, mandatory for the damage treatment by body shops. Photos are sent directly in the body shops backoffice, allowing the body shop to realize an estimation of damages reparations.

The app is available on App Store and Android.

Easy to use, the app guides the customers taking the pictures of their vehicle and the mandatory documents. As soon as the pictures are received by the body shop, the team can check them, and ask new photos to the customer if needed.

COVID situation changed but the app is still interesting ! It has a practical interest : customers do not have to go in body shops several times. They can be in touch with the body shop by phone, dealing together for the administrative tasks and take pictures, with no need to go at the body shop before

repairs.

Description

A new SAAS platform for the after-sales industry that allows to digitalize the management of the activity in order to increase productivity and customer satisfaction.

Thanks to a tool conceived with various repairers and car workshops, we have designed a brand new tool aiming at digitizing the end-to-end process of a car repair or maintenance; from the online customer appointment booking to the restitution through the workshop management.

For this, our software, accessible everywhere at all times and on all your terminals, combined with touch screens workshops, allow workshops to share information in real time with the entire team but also with the various stakeholders (rental companies, insurance companies, etc) and end customers.

A mini site for real-time tracking of repairs is created for each customer and allows him to enjoy an unparalleled customer experience; aligned with the new standards of customer relations like Uber or

Deliveroo.

Renters, fleet managers or insurers can take advantage of a dedicated access to carform.io to follow the progress of repairs in real time, to send repair orders or to exchange comments or documents with their partner repairers.

Remote Diagnostic

Brand

Remote Diagnostic

Market(s)

Light vehicles, LCV, Electric or hybrid vehicles

Launch date

10/2022

Preview of new product

Nationwide

Description

The "Remote diagnosis" operation consists of taking control of the VCI (or in other words the Vehicle Communication Interface) of the car repairer to enter into communication and carry out operations that the technician cannot do with his diagnostic tool.

Thanks to the "RemoteDIAG" by DAF Conseil offer, the service operator will virtually continue the "cable" between the VCI in the workshop and the one located at the service centre. The operator can then use a multi-make diagnostic tool, if the function is present, or directly the manufacturer's tool if he has one. DAF Conseil, in partnership with a diagnostic tool manufacturer, is launching its "Remote DIAG" technical offer, coupled with an optional "Light Vehicle" fault diagnosis assistance.

Remote DIAG" in brief

Remote DIAG" is a solution that allows the workshop technician to be at ease whatever the vehicle that enters the repair workshop. All that is required is a monthly subscription to the Remote DIAGNOSTIC web platform and to select the desired operations.

Once the subscription is created and validated, the user can navigate the Remote DIAG application and select the operations according to his needs. The operations are paid for in the form of credits.

Product name	Reparelec
Brand	Reparelec
Market(s)	Electric or hybrid vehicles
Launch date	10/2022
Preview of new product	Nationwide

Description

Reparelec® is a label for multi-brand car repairers, whose objective is to let their customers/prospects know that they have the skills to service and maintain their electric or hybrid vehicle.

In view of the irreversible acceleration of the electrification of the vehicle fleet and the risk of multi-brand repairers losing influence to brand dealerships, the Reparelec® label provides a recognised national reference system that is already supported by the two automobile federations, Mobilians and FNA. Several networks of repairers and major contractors will also soon be supporting Reparelec®.

A label that is easy to access, moderately priced (€15/month), and includes numerous services.

It's easy to apply for and obtain the label. All you have to do is register on the platform designed for this purpose and certify that you meet the three conditions necessary to obtain the label:

- All the journeymen in the workshop have a 1st level qualification (BOL)
- At least one journeyman has B2VL/BCL authorisation
- The workshop has the regulatory PPE and EPC, and the necessary tools to work on an EV or HEV

After having uploaded the authorisation titles on the platform, as well as the photos proving the possession of the necessary equipment and tools, the repairer signs an online certificate on honour and submits his label for validation. The label is awarded if it meets the required prerequisites.

The Reparelec platform also offers several services, such as communication tools, making it very easy to communicate with customers and prospects, or to benefit from offers from partners (equipment, tools, etc.) or to train directly online.

Network heads" and business contributors can obtain access to the platform in order to know at any time who in their network has obtained the Reparelec label.

DIRECT ACCIDENT

Location	Pavilion 1, Alley C, Booth n° 049
Product name	Direct Accident
Brand	Direct Accident
Market(s)	Light vehicles, HGV - LV, LCV, Electric or hybrid vehicles
Launch date	09/2022
Preview of new product	Nationwide

Description

We, consumers, are now all used to having instant information at any time of the day or night and from anywhere.

For my next vacation, I can know the price in a few clicks from my phone for a Paris-Dubai round trip, without going to an agency or even getting in touch with an interlocutor.

But it is impossible for me today to know the price of the repair of the scratch that I have just done on my car, in a few seconds without going around the bodyshops in my neighborhood, which I do not necessarily know.

And because an online estimate does not mean entering your contact details to be called back, Direct Accident offers you an instant and free estimate of the amount of your vehicle body repairs and to benefit from premium services such as:

- assist you, if you wish, in the declaration of your claim;
- making an appointment within the hour at the nearest partner bodyshop;
- 24h/72h repairs;

- we can pick up your car wherever you are by dropping off your substitute car;
- modern city cars that will take you everywhere or utility vehicles for professionals;
- the follow-up of your repairs in all transparency as you can follow your Amazon package!

And all that... from your couch!

Unique application and true innovation in the automotive after-sales sector, Direct Accident provides premium support to all drivers that combines know-how, proximity and services.

Direct Accident, the future of bodyshop services.

Pavilion , Alley , Booth n°

Product name

Garantie F2G

Brand

Garantie F2G

Market(s)

Light vehicles, LCV

Launch date

01/2021

Preview of new product

No

Description

F2G, is a service platform offered to garages which aims to make the management of the second hand vehicles warranty cheaper and fairer, positioning itself as a win-win alternative to specialized insurance, and as a reassuring extension of self- management regardless of the age and mileage of the vehicles sold.

Garages can focus on their business, and deliver quality after-sales service through the F2G warranty. We help choose the best options for vehicle pick-up, with the following objectives:

- Optimization of support costs.
- Freedom of arbitration for all actions.

Our main services:

- Administrative management of broken down vehicles.
- Logistics management. Our customers can demand the repatriation of the vehicle to their workshop rather than compensating a colleague. This allows a better control of the cost of the repair. We can also move the broken down vehicle to a garage of the brand or to another colleague for economic or technical reasons.

- Management of the financial risk linked to the guarantee. We help our customers to create a contingency budget to anticipate the expenses related to breakdown assistance. Our customers benefit from a cash advance if the envelope were not sufficient. F2G places a lot of importance on lowering the cost of warranty, and garages with a high reliability rate are rewarded by recovering up to 50% of their subscriptions.

F2G lowers the cost of the warranty compared to insurance contracts, and self-management, our customers keep control of their after-sales service.

Last important thing; the accompaniment. We attach great importance to helping our partners to better prepare their vehicles, to optimize their V.O fleet to facilitate sales through our teams.

With F2G, MRAs can serenely reconnect with a sales activity.

Description

The acceleration of the vehicle life cycle, the improvement of its utilization rate, and the digitization of the sales cycle make logistics key for the automotive sector. Hiflow created a unique vehicle transport management platform: Hiflow One.

Hiflow One is the innovative digital platform allowing you to order in 1 click all your transport of vehicles and associated services in 48 hours, in France Spain and Belgium.

The optimization of vehicle transport comes true for everyone with Hiflow One.

Choosing the most suitable solution.

3 new transport solutions are selectable. The platform intelligently recommends the best solution according to customer needs: speed, handover service, 0km to the driver...

Saving operational time

Smart address entry and license plate recognition save significant entry time and reduce the risk of error.

Personalization of transport

Intelligence is also provided at the level of services associated with vehicle transport. The requirements of a delivery to a busy professional who receives a high-end hybrid company vehicle are not the same as the transfer of a vehicle between 2 sites. Hiflow one allows you to create and select the delivery process adapted to your needs.

Improved Logistics performance

Transport optimization becomes possible thanks to the visibility offered by the platform with real-time monitoring of each vehicle. Dashboards give the key KPIs and the possibility of downloading all the transport data onto spreadsheets completes the analysis possibilities.

wheeled motor vehicles, Electric or hybrid vehicles

Launch date

02/2021

Preview of new product

Worldwide

Description

The internet turned local businesses into an ultra-competitive market. Good workmanship is no longer enough to make a difference. Customers are more volatile than ever. With a smartphone in hand, they now choose their service center based on immediacy and convenience. But it's getting harder to deliver in a context of tight margins and a shortage of skilled personnel.

Easy and convenient interactions with prospects and customers would help address this shift, at first to make customers come to the service center and then to keep them coming and buying along the years. To achieve this, we would need to automate some of the conversations with them in an intelligent way. To solve this need, Locomotive is the first messaging solution coupled with artificial intelligence.

Locomotive is able to generate conversations automatically with individuals, throughout the customer cycle, and on the channel they preferred: their mobile. The solution connects to all car workshop solutions: DMS, workshop calendar, warranty, website, phone systems, etc.

Launched in February 2021 and supported by Bpifrance, the solution is already used by more than one million French people to interact with 500+ locations: both Top 100 players (Emil Frey, Gueudet, BYmyCAR, Jallu-Berthier, Neubauer, PLD...) and family owned ones (AD franchisees, Point S and brand

agents). On average, equipped workshops have seen a 7% increase in revenue compared to other workshops.

For example, a workshop in Créteil used Locomotive to: (1) improve its local presence with the European record of Google reviews generated in 2021. It brought 18% more contacts and doubled the invoices from their website. (2) With the tool, they saved the team a hundred hours of phone calls per month. (3) They halved the storage time of vehicles waiting for repair and increased the average repair order by 13%.

m.OS

Brand

Neuralytics

Market(s)

Light vehicles, LCV

Launch date

10/2022

Preview of new product

Nationwide

Description

Launched in 2019, Neuralytics design and develop marketing tools based on artificial intelligence to anticipate and accelerate purchase intentions.

Its operation system, m.OS, is evolving to create more links between the sales and after-sales teams. Its promise : to predict, anticipate and increase the turnover of these two universes thanks to two automated targeting actions:

.online check-in (European preview): increase the average after-sales basket by automatically recommending additional services.

Invite your customers by email to engage in an online check-in journey. Each route includes the suggestion by a recommendation engine of additional services selected according to the vehicle's maintenance history, the brand's maintenance plan and seasonal services.

.workshop renewal: during the after-sales visit, detect and awaken the renewal intentions of customers

about to part with their vehicle.

Automatically send your customers a personal commercial teaser by email. Each teaser integrates the selection by a vehicle recommendation engine according to the characteristics of the vehicle owned, the customer profile and the availability in stock.

maprochaineauto.OS thus makes it possible to make systematic the time-consuming steps of writing and sending communications with an 80% saving in time (compared to traditional marketing systems). A time saving that allows teams to focus on discussion and advice with an additional turnover generation of 5 to 10%.

maprochaineauto.OS ensures the greatest possible compatibility with all the digital ecosystems of the automotive market.

Secure Diagnostic Access

Brand

Bosch

Market(s)

Light vehicles

Launch date

08/2021

Preview of new product

No

Description

Secure Diagnostic Access (SDA)- Vehicle Protected Electronics Diagnostic

Thanks to its standardised solution integrated in ESI[tronic] 2.0 Online, Bosch provides secure access to protected vehicle diagnostics (Gateway).

Restricted access to diagnostic capabilities.

In order to protect the electronics of new vehicles, embedded systems are protected by security gateways (Gateway).

Active diagnostic work, such as the calibration of ADAS driver assistance systems or a simple RAZ of the service indicator is generally no longer possible. It is a technical and administrative challenge for the workshops because each manufacturer has its own technical solution but also its own method of payment.

Secure Diagnostic Access (SDA) is integrated into ESI[tronic] 2.0 Online.

This is why Bosch created SDA. As an integral part of ESI[tronic] 2.0 Online, it is a simple solution to use.

Once your ID (Bosch ID) is created just on the Bosch secure server, you will be able to access the embedded encrypted vehicles in the SDA database.

This identifier can also be used in many Bosch applications in a private or business environment.

A state-of-the-art KTS and a stable internet connection are essential to use the SDA solution.

11 brands are already integrated into Bosch SDA.

Connected vehicle used car dealer

Brand

CARALGO

Market(s)

Light vehicles, Electric or hybrid vehicles

Launch date

10/2022

Preview of new product

Nationwide

Description

CARALGO is a digital solution developed around a mobile Application, the same type as the premium car manufacturers's mobile applications, a Dataviz Dashboard, and a Bluetooth-LoRa OBD Device to connect the existing multi-brand car fleet, it is intended, on the one hand, to the used car dealership to allow them to stay in touch with their customers, for monitoring vehicle maintenance, making appointments and optimizing garage entries, and on the other hand, to customers to offer them connected vehicle services, such as access to vehicle usage data, vehicle location, trip history, alerts and technical intervention needs, appointment scheduling with the garage , and to receive exclusive commercial offers and vehicle change proposals.

The solution also offers fleet management services for companies for shared and greener mobility, with fleet administration, management of vehicle reservations by employees, privacy mode, usage history, the location of the vehicle fleet, the management and optimization of rental contracts, statistics relating to usage data, driving behavior and ecodriving. This solution helps companies that are committed to the ecological transition of their fleet.

Solware Auto

Market(s)

Light vehicles, LCV, Electric or hybrid vehicles

Launch date

10/2022

Preview of new product

Europe

Description

Our predictive marketing solution launched back in 2011 improved since we decided to modernize the look and feel. On the top of that, we adapted "Performance" for our other target countries. This brand new web platform could either be connected to Solware auto's DMS or the other DMS available on the market. Basically, Performance enables the workshops to communicate with their clients without wasting time, because we will do it for you. The goal is to build customer loyalty and generate a higher turnover for the garages.

Performance takes into account the clients vehicle history in order to contact them at the right time for the needed maintenance.

The communication is tailored and customized depending on your workshop. Solware auto takes care of the analysis and the communication once you approved our campaign proposal. Our platform was designed to communicate either by letter, email or SMS with your clients on 8 different aftersale families (such as tire, brakes, technical control and so on) .

Our new platform will shortly enable you to send communications apart from the predictive ones aggregated by the algorithm/machine learning.

winmotor*next*

Location	Pavilion 1, Alley E, Booth n° 069
Product name	Winmotor next Web
Brand	Solware Auto
Market(s)	Light vehicles, LCV, Electric or hybrid vehicles
Launch date	10/2022
Preview of new product	Europe

Description

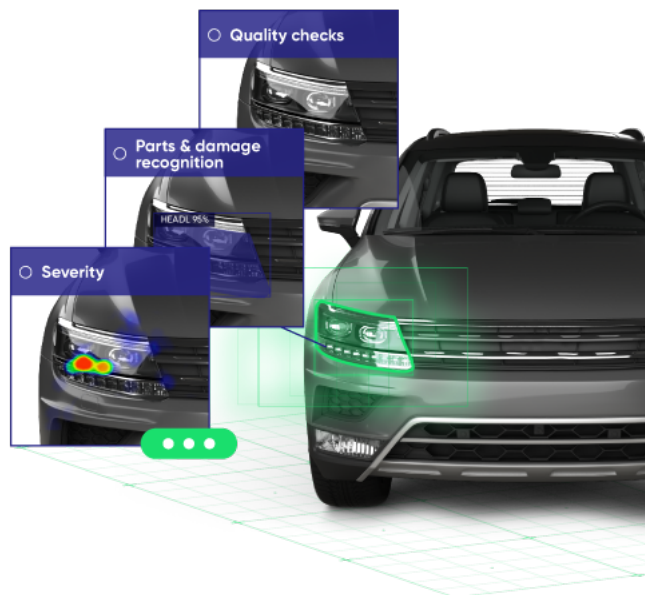

Winmotor next web version is a DMS conceived for the automobile after sales market and the spare parts distribution field at a national and international scale. Beyond its usage in 8 different european languages, our DMS adapted fiscally and legally to our target countries: Belgium, the Netherlands, Spain, Portugal, Italy and the Maghreb countries. Our management tool was designed to cover a wide scope of functionalities fulfilling the needs of subdealers and multibrand garages. To quote a few modules, winmotornext web version is tailored for bodywork and mechanical shops, car sellers and can support you with an accounting module, as well as an appointment book, the workshops management, the aftersales marketing, and business KPIs. In order to adapt to the garages needs, we created modular functionalities. Our collaborative software is built based upon 30 years experience. We aim to improve the workshop visibility and productivity. The software feels immediately familiar which enable us to lower the training time and the support workload. On the top of that, the web version eases the roll out of our software and obviously the installation phase. More than a software, winmotor next is the new partner for your car repair shop.

Webasto

Location	Pavilion 1, Alley R, Booth n° 108
Product name	WEBASTO UNITE 22Kw
Brand	WEBASTO
Market(s)	Electric or hybrid vehicles
Launch date	09/2022
Preview of new product	Europe

Description

Webasto, a major player in mobility, is entering the market for charging stations for electric and plug-in hybrid vehicles.

The Webasto Group is a global partner for innovative systems for most car manufacturers and is one of the top 100 suppliers in the industry.

With our class-leading charging systems for electric vehicles and the development of high-voltage battery systems, we are focusing on the future of mobility in all sectors.

Webasto Unite has a charging capacity of up to 22 kW and not only enables easy charging, but also other intelligent functions with the Webasto ChargeConnect software.

The integrated local charge management prevents charging peaks and grid overloads. It works both in stand-alone mode and in cluster mode with up to 32 terminals (hub/satellite).

Webasto Unite complies with the Measuring Instruments Directive (MID) and has a visible external meter. In addition, the Unite terminal can easily be integrated with various energy management systems such as photovoltaic panels.

Certified by the ADVENIR program, the installation of our charging station by an IRVE installer is eligible for state subsidies.

We also offer accessories to facilitate installation: fixing feet for one or two charging stations, as well as a charging cable (type 2).

Easy control and management via a digital platform solution

The new Webasto Unite charging station can be conveniently and intuitively operated and controlled via the Webasto ChargeConnect digital interface (web portal & app).

Providing maximum transparency and control, Webasto ChargeConnect can also be used for billing through automatic exports. Comprehensive measures have been taken to ensure the protection of privacy and personal data.

Description

The BARTENDER Garage is the evolution of the BARTENDER Lubes: a mobile furniture solution for oil changes in garages and workshops.

Its design, all in finesse and elegance, takes up the graphic codes of KENNOL by offering solutions that no other oil bar had imagined:

- oil change recommendations written on the furniture (+15,000 vehicles)
- 12 different oils (engine and transmission)
- retention tanks on each level
- 12 jugs each dedicated to a specific oil to avoid tedious mixing and draining

The oils are offered in innovative packaging: the ECOBOX 20L! Handling at height is thus facilitated, and product rotations drastically improved.

An all-in-one, scalable solution for servicing 100% of the French LV fleet (also adaptable to LCVs, 2-wheelers, HGVs, etc.).

Description

THE IA900WA CHASSIS PERFORMS BOTH WHEEL ALIGNMENT AND ADAS CALIBRATION.

It is a unique solution on the market today that allows you to diagnose, check and adjust the alignment and calibrate all the ADAS systems of a vehicle in one tool.

WHEEL ALIGNMENT SOFTWARE:

Indication of maintenance recommendations and the possibility to attach photos and notes.

Real-time reading of vehicle angles.

Illustrated alignment instructions, real-time readings, required tools and adjustment locations are displayed on one screen.

ADAS CALIBRATION SOFTWARE:

Chassis placement in just a few minutes.

Set the height of the ADAS calibration target at the touch of a button.

Full colour, step-by-step illustrated instructions to guide the user through the ADAS calibration.

Adjustable crossbar.

Minimum height of 15 cm - maximum of 215 cm.

24" touch screen monitor.

Simulcast from MaxiSYS Ultra.

MaxiSYS Ultra tablet holder with controls.

MaxiSYS interface instead of a PC for wheel alignment.

Precise optical measurements with 6 high-resolution cameras.

Self-calibration of the cameras each time they are used.

Cameras automatically follow the height of the vehicle on the lift.

New locking mechanism for the folding crossbar.

Crossbar controlling pitch, yaw and centring.

CAPELEC

Location

Pavilion 2.2, Alley A, Booth n° 056

Product name

Particulate measurement in numbers: PN

Brand

CAPELEC

Market(s)

Light vehicles, HGV - LV, LCV, Buses - Coaches

Launch date

10/2021

Preview of new product

Nationwide

Description

Do particulate filters work as well as we think they do?

The good news is that good filters work extremely well.

The bad news: a significant proportion (15%) have a problem and emit up to 10,000 times more particles.

The result: the average particulate matter emitted by the entire fleet is underestimated by a factor of 5.

The existing measurements at the Periodical Technical Inspection (Opacimeter) cannot detect manipulation, alteration or failure of the DPF.

The CAP3070 provides an unambiguous PASS/FAIL result on the existing fleet (Euro 5 & 6) and future Euro 7 vehicles (Complies with regulations: Netherlands, Belgium, Switzerland, Germany...)

The Extended DC technology with the Venturi effect (Patent) is free of soot clogging.

The pump and the filter system are not exposed to fouling. Critical internal parts of the collector are

protected by a clean air flow

The optimal and robust design offers clear advantages:

- Volatile particles are removed in the gas phase as in vehicle homologation measurements.
- Ultra fast response time
- Wide measuring range of well over 10 million
- No operating fluids (no harmful flammable fluids)
- Insensitive to vibrations
- Position-independent operation (important in the garage and CT environment)
- No dilution, so no risk of amplifying errors due to clogging by the x200 dilution ratio (important for accuracy, stability and durability)
- No need for compressed air

As well adapted to the needs of technical control as to the world of repair, the particle measurement offered by CAP3070 benefits the whole CAPELEC range. Multiple combinations can be envisaged on the basis of the 4 measurement technologies: Gas analysers (Petrol/LPG/NGV), Opacimeter (Diesel), EOBD and PN particle measurements.

Description

The biological degreasing fountain is a mobile and perfectly ergonomic low pressure fountain. It cleans perfectly the brake systems or the mechanical parts without using solvent. This allows to respect the health of the operator as well as the environment.

The fountain is used without any conventional degreaser, aromatic or halogenated solvent.

An aqueous solution, composed of specific surfactants, is formulated to remove all types of dirt: grease, oil, solids, carbon residues, various deposits...

The cleaning concept works with :

- A cleaning solution, heated to 40°C

The use of the CLAS biological fountain is innovative in its ability to work either in a high position, intervention on an elevator, or near a workbench, or on the ground, rapid braking intervention.

Size of the fountain: 750x600x1030mm

Size of the tank: 750x500xh100mm

Electrical supply: 230V

Pneumatic supply: 6/10bar

Heating temperature: 40° C

Consumable: Water and microorganism solution

Description

1 out of 3 new cars will be electric by 2030. What will be the crucial element?

The performance of electric vehicles is closely related to the proper functioning of the battery, which needs to operate in a specific temperature range to be efficient and prevent damages from reducing its life.

Therefore, when it comes to electric vehicles, the air conditioning system plays a dual role: on the one hand, it manages the air temperature inside the passenger compartment, and on the other hand, it ensures the cooling of the battery and electronics.

Thermal management further increases the importance of A/C system maintenance in electric vehicles: if the A/C system doesn't work efficiently, it will compromise vehicle operation.

In step with the times and with the aim of providing a useful tool for professionals involved in the maintenance and repair of electric vehicles, Errecom adds to its line of additives and products specifically developed for such vehicles, the new EV Starter Kit, containing UV dyes and oils in cartridges, adapters and EasyGun.

Red Brilliant: red UV leak detector dye POE based for electric compressors – 240 mL for 32 vehicles.

E – POE 68, 80, 100: specific lubricants for electric compressors with viscosities 68, 80 and 100. These A/C compressor lubricants are characterised by branched POE technology that ensures optimised chemical stability in the system, low moisture and acid content that minimises acid development during the life of the system; excellent electrical insulation properties that make the lubricant suitable to be used in hermetically sealed systems.

EasyGun: a tool for inserting 240 mL cartridges of UV leak detector dyes and lubricants in A/C systems. R134a and R1234yf adapters.

UV protective goggles.

Description

With three worldwide patents registered, Hy-Carbon Connect, the result of four years of R&D, is a successful response to market expectations.

This hydrogen injection engine descaling station improves engine pollution control through a complete vehicle diagnosis:

The motorist's profile is defined (type of engine, type of journeys,

The driver's profile is defined (type of engine, type of journeys, number of kilometres travelled per year, etc.);

The fault codes recorded in the ECU are read out via the

OBD (On Board Diagnostic) and classified by category (EGR valve, turbo, intake valves, others);

Via the OBD socket, the sensitive parts are set in motion by comparing

the requested position and the actual position in order to assess the vehicle's degree of clogging.

Once these three parameters have been established, the algorithm developed by FFED's engineers makes it possible to use the information collected by carrying out customised processing adapted to the customer's needs and also by anticipating the vehicle's future requirements in order to avoid engine clogging and breakdowns.

After processing, Hy-Carbon Connect draws up a comparative "before/after" report sent by e-mail to the motorist highlighting the real state of health of the engine. At the exhaust, a reduction of about 50% in pollution and up to 15% in the vehicle's fuel consumption is observed.

With this innovation, FlexFuel Energy Development continues to respect the environment and to promote preventive and even predictive maintenance of vehicles.

GETRAC

Location	Pavilion 2.1, Alley C, Booth n° 012
Product name	Touch-e glove
Brand	REGELTEX
Market(s)	Electric or hybrid vehicles
Launch date	05/2022
Preview of new product	Worldwide

Description

The Touch-e glove is the revolution in the field of electrical mobility "a second skin for better dexterity/sensitivity". Its very low thickness allows to improve considerably the precision during interventions on electric vehicles (car, motorcycle, truck, bus) and thus to handle easily connectors or to work with isolated tools. Its surface Grip and its new ergonomic design bring an optimal working comfort.

Designed for mechanics who become electricians, it responds to the 3 risks identified during interventions:

- 1.Electrical risk: class 0 electrical protection (1000V AC / 1000V DC) in accordance with standard EN60903
- 2.Mechanical risk: protection in accordance with standard EN388
- 3.Flash arc risk: protection in accordance with standard EN61482-1-2

Finally, as far as packaging is concerned, no more polluting plastic and a new anti UV cardboard packaging that supports an environmental program "1% FOR THE PLANET".

Worldwide

Description

Initial objectives:

In order to respond to the issue of energy transition as well as the possibility to work in low emission zones, Guernet Compresseurs has reinvented its Tyrebox126 concept, on-board set of tyre changer and air compressor in 3.5T intervention vehicles (mobile workshops).

The Tyrebox® was initially powered either by an additional combustion engine or directly by the engine of the vehicle in which it is installed.

This new unit, renamed E-TB126, takes up the operation of the current machine except for the combustion engine.

It draws its energy from a Life Po4 48V 200ah lithium battery;

Battery life E-TB126:

Tyre changer: 120 Tyre change cycles

or

Compressor: 1.5 hours continuously at 12 bar

Charging time E-TB126:

230Vac: 6 hours from 0 to 100%

Photovoltaic panels: 10% per day (example: Lyon city in May)

Vehicle alternator (thermal vehicle): 6% per hour

Installation:

This machine can be installed in a 3.5T thermal or electric vehicle

Assets:

- Intervention in low emission zones
- Reduced carbon footprint
- Optimal axle load distribution
- Better energy efficiency
- Fuel saving
- Hearing comfort for the operator
- Suitable for breakdown and fleets

For more details, refer to the attached technical data sheet.

Description

Equipped with on-board intelligence and a simplified interface, gyspress control integrates the databases of the car manufacturers with their rivet references and recommendations.

Simply select the vehicle brand and the product will automatically suggests the reference(s) known to the manufacturer. By default the dies to be used are displayed. Then, the screen guides the user through the rivet installation process. If the operator sets the rivet incorrectly, the product will alert him. Conversely, if everything is done correctly, the machine will confirm the conformity of the rivet set according to the manufacturer's specifications.

This product offers many possibilities such as :

- Creating personalised spaces per user (if several people use the tool)
- Entering new manufacturer or rivet data
- Programming jobs
- Guarantees the conformity of the rivet installation according to the manufacturers' requirements
- Offer the possibility of traceability
- Update of the product possible by usb key (free update)

Description

MEGA MACS X AND MT-HV: AN UNBEATABLE TEAM

Combining mega macs X with the MT-HV measurement module creates a real dream team. Not only does the MT-HV module have the same design as mega macs X, but it is just as flexible. Both tools work via Bluetooth®. What could be more obvious for a new generation of tools? MT-HV is an innovative measuring module with an integrated high-voltage measuring board and a module compartment that accommodates well-known low-voltage measuring modules such as the MT-56 or the MT-77 module. Thanks to this ingenious trick, the MT-HV can be converted into a wireless measuring module for all your low-voltage and high-voltage measuring tasks. This solution is particularly attractive if the mega macs 56 or mega macs 77 measuring module is already available in the workshop. MT-HV is also available with an optional additional MT-77 module. It has been specially designed to work with mega macs X and provides all the measurement functions required for work on hybrid and electric vehicles.

Description

The " Remote Diagnostic " consists in taking control of the VCI (Vehicle Communication Interface) of the automotive repairer to enter in remote communication with the vehicle and to carry out operations that the technician cannot do with his diagnostic tool. With the "RemoteDIAG" offer, the service operator will "stretch a virtual cable" between the VCI connected to the vehicle and the diagnostic tool located in the Service Center. The service operator can then choose the most appropriate diagnostic tool (multi-brand tool or even OEM tool) to perform the requested operation.

LAUNCH SMARTLINK technology is composed of a SMARTLINK C at the repairer's location, a SMARTLINK B at the service provider's location and a Cloud SRDS hosted on multiple European servers.

It is today the only technology that allows to go so far in the remote transmission of car diagnosis, while offering a maximum simplified implementation for the repairer.

TechPRO® - E-Scan function

Brand

MAHLE

Market(s)

Electric or hybrid vehicles

Launch date

05/2022

Preview of new product

No

Description

TechPRO® E-SCAN, the first function dedicated to the electric and hybrid world

E-Scan is the new diagnostic function available on the MAHLE TechPRO® diagnostic line, dedicated to vehicles with the latest generation of engines: HEV, PHEV and BEV.

First in the market, through the E-Scan function the TechPRO® diagnostics can quickly display the parameters relating to the state of the high voltage battery (involved in the propulsion of the vehicle), disseminated in the various electronic control systems of the vehicle's network (battery management system, hybrid system, electric traction, etc.) This gives independent workshops access to the "health status" of the most important component of electric vehicles for the first time. In the future, independent workshops will also have a precise overview of the condition of the battery of a battery-electric vehicle or hybrid vehicle.

It is therefore possible to know which are the blocks or cells that heat up the most or if there are elements that differ significantly from the average resistance or voltage values for example.

The information displayed is also ready for the generation of a print or digital report to be sent via email or saved in electronic format.

The advantages for the user are:

- Quick access to information on battery status
- Standardized interface with homogenous parameter descriptions among the different car makers.
- Possibility of increasing the skills on the latest generation engines (BEV, PHEV, HEV), through the analysis and comparison of the generated reports.
- Possibility of transferring complete information to its customers on the status of the diagnostic parameters relating to the HV vehicle battery.

The new function makes it easier for independent workshops not only to repair the vehicle battery, but also to assess the vehicle's residual value.

Description

Artificial Intelligence at the service of ADAS calibration -

It seemed impossible before, but the Digital ADAS 2.0 evolution cuts calibration time even further.

Thanks to special laser meters directly connected to the diagnostic tool, TechPRO® Digital ADAS 2.0 can directly acquire all the parameters related to the vehicle alignment, allowing you to execute the calibration immediately. Even the vertical positioning of the monitor is automatically handled from the diagnostic interface display, through a simple command which allows to reach the correct position, according to manufacturer specifications.

Fully automatic, for calibration in the blink of an eye: with its powerful Keystone system (patent pending), the vehicle recognition through license plate reading, and the fully automatic measurement, a calibration can be completed in just a few minutes.

- Targetless technology by MAHLE. Thanks to the versatility of its digital panel, it allows you to adapt the screen to any reference protocol of the car manufacturers, present and future.
- Keystone System- extreme precision is guaranteed by the self-adaptive system, which allows the software to assess the physical environmental conditions and adapt the image of the digital target accordingly.

- Laser meters with wireless transmission: The new laser meters DLM-01, which slides on a magnetic strip, allows to acquire on TechPRO® the parameters of alignment of the vehicle in a fully automatic way
- 3D tutorials: Clear and comprehensive 3D tutorials can be called up on TechPRO® Digital ADAS 2.0 monitor to clarify each step of the calibration procedures
- Fully automatic monitor height positioning: The height of the monitor is set automatically and at the simple confirmation click on TechPRO®
- Camera for license plate recognition: Vehicle identification by automatic plate identification
- 3 mt horizontal bar: New modular solution for the measuring bar, which has a central joint to allow easier transport.

Description

Autonomous Alignment and Tread Depth for the Service Drive

Accelerate your alignment business With Hunter's unmanned alignment inspection system, Quick Check Drive™. Intelligent and Fast : Scan a vehicle every 3 to 5 seconds with no stopping or labor required, making it possible to check every car that visits your shop. Only activates when vehicle is present.

As the vehicle drives through, cameras measure distances to the tire to calculate total toe and individual camber.

Four High-Definition Cameras, 8 Cameras and 32 Laser Sensors : Accurately inspect camber and total toe and 16 measurements taken to increase accuracy.

Most vehicles need alignment. Drive through inspection reveals the opportunities.

With the Quick Check DRIVE™, you can control quickly the camber and parallelism (which affect the tires wear and the fuel consumption) in your workshop and without using a lift.

Description

Quick Tread Edge™ delivers detailed tire condition diagnosis in less time and with added edge wear detection, providing a greater analysis of overall tire condition. Service providers can now better identify tire wear on the 'edge' of every tire, while providing customers with informative, in-depth inspection results.

Quick Tread Edge™ can be installed as a standalone unit with two mounting options, or integrated in a flush mount configuration with Hunter's touchless alignment inspection system, Quick Check Drive™. Quick Tread Edge™ introduces a durable, pedestal-free design, allowing service providers maximized shop space.

Both systems are seamlessly connected with Hunter's online business intelligence tool, HunterNet®, which automatically displays digital inspection findings through Flightboard™, allowing customers to quickly see their results first-hand.

Quick Tread Edge™ is also compatible with Hunter's automatic vehicle identification system, Quick ID™

Description

Unit Common Rail Injector Tester Bosch DCI 200

The latest generation DCI 200 Common Rail Injector Tester allows testing of new generation common rail injectors with internal pressure of 2500 bar at full load and 2700 bar for leak testing.

The test time is very short. It is on average 15 minutes per injector thanks to the new system of quick mounting of the injector.

This new technology now gives diesel shops access to automated testing of 14 new versions of Bosch injectors in addition to the older testable generation on the previous generation EPS 205.

Moreover this new generation is able to generate an IMA code at the injectors tested.

Description

Futura Auto is the easy-to-use electronic key cutting machine with integrated tablet, developed for duplicating all types of car keys. It can also cut motorbike, microcar, van and truck keys, and most complementary keys used for petrol cap locks, glove boxes and roof racks.

Designed for key cutters who want to enter the automotive key business, thanks to the user-friendly software that guides step-by-step through all key cutting and decoding operations, it is perfect also for locksmiths offering roadside services. Futura Auto features the same unique, compact and practical design as the best-selling Futura range.

Description

If you're looking for ways to grow your business, you need to have visibility of what the naked eye can't see. Tru-Point™ uses highly accurate advanced camera technology, targets, and top-of-the-line software to quickly uncover any alignment problems the vehicle might have so you can perform a perfect ADAS calibration. Tru-Point™ streamlines the process from beginning to end with simple, real-time, and interactive visual indication, eliminating the need for manual measurements or complicated guide references. Our intuitive ergonomic controls enhance the on-screen indications to easily and precisely position the system

to meet OEM specifications.

By creating a three-dimensional model of the vehicle and its surroundings, only Tru-Point™ can check if the vehicle meets the required OEM alignment specifications and also automatically compensate for the levelness of the workshop floor.

Tru-Point™ provides job quality and increased productivity, eliminating uncertainty so you can focus on your business and customer satisfaction.

Description

Multifunctional, electronic battery charger (BATTERY MANAGER) for complete maintenance of WET, GEL, AGM, MF, PbCa, EFB, Li 6V/12V/24V batteries and for support activities in interventions, including diagnostics, on vehicles carried out in workshops, body shops and dealers.

The Pulse Tronic technology guarantees optimal battery charging over 8 phases.

Features:

- Automatic charging and maintenance in Pulse Tronic based on the technology of the selected battery;
- BOOST function for quick charge;
- COLD function for charging and maintenance of batteries at low temperatures;
- stable POWER SUPPLY for diagnostics (BSU) when changing the battery (SUPPLY) and maintain the battery health of vehicles on display in showrooms;

- Batteries maintenance through RECOVERY function, to recover sulphated or very low batteries; and EQUALIZATION function to restore optimal functionality with periodic regeneration;
- TESTER for checking terminal voltage, starting capacity (CCA) and vehicle alternator operation;
- Start aid;
- Cable extension compensation function;
- Dedicated App* for additional testing and charge monitoring functions. Operation via BLE wireless connection;
- LCD display;
- Protection against overcharge, short circuit and polarity reversal.

Fit with PFC device. Complete with cable with clamps.

With OPTIONAL wall support kit.

*Requires iOS or Android device, not included.

Preview of new product

Nationwide

Description

CCS 2 Dynamics: the new TEXA mobile ADAS solution for the calibration of CAR, VUL, TRUCK and BUS cameras. Linked to TEXA Diagnostics - IDC5 software

The anodised aluminium structure of the CCS 2 Dynamics includes :

- Swivel wheels, to move the structure and position it easily and quickly
- 4 ground stabilisers
- A central column for longitudinal and transverse movement with stainless steel rails
- Bluetooth telemeters, which can communicate directly with the IDC5 software, for optimal positioning
- Side bars of different sizes (depending on the environment CAR and TRUCK): removable for easy transport and can be anchored to the base with brackets
- A central support supporting the panel that can be extended by means of a manual sliding system to reach the heights recommended by the manufacturers

In the CAR configuration, the side bars can support the CCD geometry heads.

The CCS 2 Dynamics will therefore be able to work with the dedicated software to control the

convergence and the thrust angle of the vehicle.

Description

The Terminator 2 automatic windscreen repair process has a patented technology that is unique in the world: multi-repair. It can repair up to 3 impacts simultaneously, thus allowing operators to improve their productivity by increasing their potential number of vehicle entries into the workshop. It is equipped with a precise programme for each type of impact, allowing high quality repairs, the result of over 35 years of expertise and know-how. The device is equipped with a 5-inch colour touch screen of the latest generation, with access to a large amount of information, such as the number of repairs carried out by type of impact, which can be consulted on the screen and scanned, and the personalisation of the welcome page and the display. The interface is multilingual (French, English, German, Italian and Spanish) and allows the manual and technical video to be consulted directly on the screen with ease. A battery indicator is also visible on all screens in real time, this battery is easily accessible and charging is done directly on the device.

Description

The 360 WASH FRANCE robot offers contactless washing that respects the bodywork of the vehicle, no more scratches.

Due to its unique design, the 360 WASH robot is DRIVE enabled. This allows the user to remain in their vehicle for the entire operating cycle from payment until the end of the wash.

The DRIVE wash is a real revolution allowing the product to be accessible to people with reduced mobility, to provide comfort to the user who no longer leaves the vehicle, particularly useful for mothers of families, sales representatives, business leaders, cabs.

The 360 ??WASH DRIVE Robot washes the vehicle at 360° via a high-pressure arm equipped with 18 Nozzles, a high-pressure ramp integrated into the floor, a backlit foam curtain, a side spray of magic foam.

The blower with 4 motors ensures the drying of the car on each cycle of our robot.

The coating in dibond printed with laser and varnished in car bodywork allows customization to the colors of each customer and give a nice esthetic of the product.

An electrical cabinet (with protections, frost protection system and automaton), a chemical cabinet with 5 adjustable dosing pumps and the high pressure pump complete the installation in the technical room near the track.

Description

The new 5L KENNOL oil can marks a step forward.

Lighter in its manufacturing, it is however stronger in its design studied on a test bench of resistance of materials. It thus travels to the other end of the World without undergoing deformation.

Its signature in molecules underlines its French manufacture, and its translucent gauge reveals KENNOL oils or liquids, also of French manufacture.

A thoughtful and modern design, evoking the lines drawn from the finest concept-cars, rather than the standard clumsy oil can.

Description

The new cardboard boxes for transporting KENNOL cans have arrived!

The collection of 4x5L, 4x4L, 12x2L and 16x1L cartons has benefited from an in-depth restyling, in order to best enhance the products in wholesaler stocks. With these pure KENNOL graphics they stand out everywhere.

The identification of the products has remained ideal, with the large printing area on a white background, giving the essential information:

- Product Name
- reference
- bar code

- batch number (to identify the date of manufacture, packaging line, etc.)

And above all, the dimensions have been adapted to the new groove in the material, in order to reinforce the protection of the products, and therefore the solidity of the full box. Transport is now protected from A to Z, including to the most exotic French or export destinations (DOM-TOM, foreign distributors, etc.).

Recycled and recyclable, they are printed only with biodegradable inks, in accordance with our ISO 14001.

ECO 2in1 Super Ethanol 500 ml

Brand

ERC FRANCE

Market(s)

Light vehicles, HGV - LV, LCV

Launch date

07/2022

Preview of new product

Nationwide, Europe

Description

2in1 Cleaner & Lubricant! ECO 2in1 SUPER ETHANOL unique formulation has been specially developed to respond to the main problems cause by Ethanol:

1- Corrosion: ERC uses optimal three-phases (fuel, water, gas) protection technology to prevent corrosion of the fuel tank, supply lines and interior of the engine.

2-Oxidation and aging of fuels: Here too, ERC uses its unique technology based on the combination of two antioxidants (aminic and phenolic) for better storage stability. The synergistic effect of these two antioxidants allows Eco Ethanol 2in1 to provide reliable protection against premature aging while preventing against oxidation phenomena.

3- Deposits in the injection system/filters/valves/combustion chamber: ERC uses a new generation of PEA-based detergents (PolyEtherAmine). Unlike traditional detergents commonly used these newly detergents are more soluble and therefore more effective in fuels containing ethanol. Its action prevents deposits, thus restoring normal fuel flow, avoiding overconsumption and fully restore engine

power.

4- Drying of engine parts/loss of lubrication: Ethanol is an alcohol-based fuel. Its usage, unlike fossil fuels, has an impact on the lubrication of engine parts because it dries out the contact surfaces more quickly. Hence the need to add a Lubricity Improver to avoid rapid wear of parts due to higher friction.

ERC innovation has been developing a new generation of additives for combustion engines powered by biofuels or alternative fuels, by bringing to the market a unique and ultra-concentrated formulation (1:1000), answering the two major problems of deposits/sediments and lubrication while maintaining life expectancy of engine parts.

Preview of new product

Worldwide

Description

The IK e FOAM Pro 12 is the first Foam sprayer in the market that can be actioned three different ways. It can be powered with the new battery operated compressor included in the foamer, manually, or releasing the hose and introducing external compressed air directly to its inlet valve.

Designed for professional cleaning tasks in several industries. This sprayer has been manufactured for the generation of dry and durable foam. Designed to be used with chemical agents with surfactant properties.

The sprayer is equipped with three mixers (orange, grey and green) which allow to vary the type of foam by choosing between wet, intermediate or dry foam.

With the use of the foam we manage to increase the contact time between the chemical and the surface to be cleaned, cleaning fabrics and upholstery avoiding excessive soaking which generates the appearance of fungus and bacteria, and finally having greater visual control of the sprayed surface. Its translucent tank allows to check the level of liquid inside and has a system for positioning the lance once the spraying task has been completed.

Preview of new product No

Description

Spray extraction for the first time as a battery solution for professionals: Puzzi 9/1 Bp from Kärcher. The first battery spray extraction machines for professional users, offering unprecedented cleaning possibilities for everyday cleaning tasks. No need for an electric cable or extension cable, it works autonomously for more than 35 minutes after a sixty minute charge. Its field of application is the deep cleaning of carpets, the cleaning of car seats and the removal of stains from all types of textile surfaces. The increased mobility, ease of use and exceptional cleaning power make deep cleaning and stain removal of textile and carpet surfaces possible anywhere and without effort.

If dirt such as drink stains or food residues have accumulated on textile surfaces over time, the Puzzi 9/1 Bp Pack is the ideal solution for removing them.

Its operating concept aims to make the user's work as easy as possible thanks to its compact

dimensions, unrestricted freedom of movement, low weight and the ability to store all accessories on the unit. There is nothing to stop the cleaning with this device and it offers new possibilities of use. With its professional 36 V battery, equipped with an LCD display showing the time remaining, it can be used with other Kärcher battery-powered products and thus offers a range of professional tools from high-pressure cleaners, wet and dry vacuum cleaners to a complete range of professional garden tools.

BIO STARTER

Brand

MA-FRA

Market(s)

Light vehicles

Launch date

05/2022

Preview of new product

No

Description

BIO STARTER is a specific product based on selected microorganisms (enzymes) and with odorzero technology for a better performance and effectiveness on all types of purification plants.

BIO STARTER helps to reduce the polluting load where problems of out-of-specification water analysis arise, bad-smelling recycled water and in general problems due to the malfunction of the main system.

The daily addition of the product, according to the data shown in the table below, allows you to solve the problem found within 4 weeks. It is then recommended to make a maintenance treatment in order to keep the system efficient.

HOW TO DOSE

The dosage is carried out once a day with a dosing pump or manually, by pouring the product directly into the oxygenation tank. The results of the treatment are observed after 10 days from the start of the dosage and maximum benefit is achieved over the next 30 to 60 days.

NOTE: in the event of prolonged system shutdown (eg for more than 7 days) or suspension of the maintenance cycle, it is advisable to resume treatment by restarting from the Start-up phase.

ADVANTAGES

- Reduction of the polluting load due to surfactants
- Clarification of waste water
- Deodorization of recycled water
- Possibility of increasing the % of reuse of purified water with consequent economic savings
- Facilitating the work of the bacterial purification plant which is often undersized
- Possibility to modify dosage and conditions according to the workload
- results in only 4 weeks
- concentrated product: only 2ml per car
- ideal for self-service foaming car washes

Description

The SWC PLT5 mat cleaner is a patented system developed at our facilities. This unique, innovative product is easy to install and economical, providing a simple, long-lasting and hygienic solution to washing car mats, using only the pressurised water available at car wash bays. This allows you to offer an improved service to customers and increase profits by increasing the amount of time water is used at car wash bays.

The upright car mat cleaner and its many features offer many benefits to your business:

Washing can be performed within the bay, giving customers the option of washing their car mats at the same time as their vehicle. The open basket system facilitates the loading and unloading of the mats, without the use of force, for improved handling.

The vertical layout of the mats optimises space and allows for better draining. Moreover, the rotary basket system allows both sides to be washed without having to touch them until they are ready to be put back in the car.

The SWC PLT5 system facilitates cleaning and is environmentally friendly, since it does not consume electricity and maintenance only consists of lubricating the moving parts.

Manufactured in the EU to the highest standards and available internationally

Description

Xenum introduces ADMAX AdBlue® ADDITIVE, a unique and patented product. AdBlue® can show traces of crystallisation in the SCR catalyst under certain conditions. This occurs mainly when short distances are driven and the temperature in the catalyst is not high enough.

The SCR catalyst is affected by crystallisation of clogged AdBlue®, which leads to loss of power and malfunctions. This does not have to be the case, as Xenum's new ADMAX additive now offers an easy solution. This additive prevents the crystallisation of AdBlue® in the SCR catalyst, even when it is not at full operating temperature.

Description

This is an EV unit that is a power source for an electric vehicle.

Combined a motor, an inverter and a transaxle.

Aisin has contributed to the achievement of top-class electric mileage among electric units by employing new technologies including the optimization of motor magnet arrangement and the use of low-viscosity oil for electric units.

What is eAxe, the key to vehicle electrification?

eAxe is a drive unit combining a transaxle, a motor and an inverter, which are indispensable for electrified vehicles. Aisin's eAxe is not only used in eco-friendly vehicles but is also utilized to provide happiness and enjoyment for driving, which is, so to speak, the heart of an electrified vehicle. The development of eAxes has become a matter of urgent necessity throughout the world, and engineers are undertaking a keen development race.

The number of rivals is increasing, since electrification has significantly lowered the barriers to entering the automobile industry. Industrial machinery manufacturers and electronics manufacturers, which have been active in other industries, have proposed entering the automobile industry one after another. If

conventional suppliers stop evolving, they could lose market share completely.

What is eAxe, which Aisin is working on amid these circumstances? The project leader Jinnai spoke forcefully.

"Aisin possesses the world's leading technologies for transaxle development and expertise for motor development cultivated in the hybrid vehicle components development. In addition to these, we have the pride of continuing to engage in vehicles, which affect human lives. For this reason, eAxe that we develop must be the most reassuring and safest device and satisfy more people."

Sustainable strut bearing

Brand

SNR

Market(s)

Light vehicles, LCV, Electric or hybrid vehicles

Launch date

12/2022

Preview of new product

No

Description

This innovative strut bearing combines a top cover made of recycled polyamide and a support made of aluminum. By using less virgin raw materials and offering more robustness and mass reduction, this sustainable strut bearing allows to save up to 4.8 kg of CO2 emissions along the total life cycle of one vehicle.

The top cover is made of high-quality post-industrial recycled polyamides, which have been finely selected to guarantee a high level of technical performance with a good stability, close to that of a virgin premium material. In addition to equivalent technical performances, the use of mechanically recycled plastics leads to a significant decrease of CO2 emissions linked to the top cover production step, with a minimum gain of 25% on the Global Warming Potential criteria.

The support made of aluminum fulfills all functional requirements of the application, especially for demanding vehicles such as HEV and BEV, heavier than a pure combustion engine version, the high load requiring a more robust bearing. The newly developed design also matches with automotive costs

targets, while offering several improvements:

- more robust and rigid than plastics, aluminum enables deformations reduction of 40%. Risk of internal contact causing noise and warranty returns is highly reduced.
- thanks to a weight saving up to 80 g, the aluminum support helps indirectly address environmental target with up to 1.2 kg of CO2 emissions saving along 150 000 km drive of the vehicle.

The use of aluminum, making the support recycling easier, as well as the use of recycled raw materials for both the top cover and the support, offer a substantive response to current trends and European standards. Up to 3.6 kg of CO2 emissions are saved during manufacturing and end of life phases of a vehicle.

This sustainable strut bearing with aluminum support and recycled plastic top cover has now reached sufficient technical maturity to consider transitioning to the development phase in a near future.

Description

The production of cars is a process controlled in details. Based on the manufacturer, various types of test drives are performed at the end of the production line, that can reveal some technical or cosmetic problems of cars. Our solution is based on AI methods and machine learning, taking the advantage of large amounts of data available in the production process.

The solution - Personalized Car Quality Safety Predictor stems from all the available data, stores them, learns from them and predicts the final quality of the car.

On the one hand, it simplifies the quality personnel's work, because on the basis of learning from the data and decision-making machine learning algorithms, it recommends to the quality personnel which cars should be selected for the road tests and which should not. On the other hand, the solution increases the quality of production and eliminates customer complaints, since in some types of manufacturing plants 100% of cars do not pass this test - and thus this solution, by identifying cars that should pass the test, reduces the number of potential customer complaints, which makes production process more efficient and increases the quality of the final product.

The solution is not limited only to the road test, but is multi-potential, since it can be used elsewhere in production - according to the customer's specifications - for example, to determine the quality of the

water test in the production of cars, etc.

Except that, the solution can also be used in other types of industries where it is important to optimize the production by predicting the final quality, and where big data is available for AI.

Description

The Smart AI pumps solution monitors pumps performance in real time, detects degradation in the quality of the painting process, detects gradually increasing oscillation of painting parameters and predicts failures of the production process.

Based on AI methods, the solution saves approximately 30% of maintenance costs, reduces time and personnel needed for operating the pumps, includes in the learning process also the maintenance know-how, and improves painting quality.

The solution can work with several attributes, numerous pumps and provide the answer for various use cases, such as - online monitoring, anomaly detection, or failure prediction. Based on the use case, the user is provided user-friendly access to various types of dashboards - see pictures, such as: parameter selection for display, monitoring of various numerical attributes, statuses, tabular visualizations, process flow diagrams, etc.

Description

The BARTENDER Bulk is the latest version of the KENNOL oil bar for shops and auto centers.

With the addition of 2 side modules, the original KENNOL BARTENDER Garage becomes a service and sales unit for shops. And responds perfectly to the precepts of the Citizen's Climate Convention:

- Gradual obligation to implement bulk in stores
- Limitation of over-packaging and single-use plastic by developing returnable packs
- incentive to consume only the necessary quantity

The BARTENDER Bulk offers 12 different engine oils, stored in 20L ECOBOX (exclusive KENNOL bag-in-box). The consumer can find the oil change recommendation directly on the furniture among 15,000 different vehicles, or in more detail on the KENNOL application.

Containers (returnable and reusable) are available in the sides of the cabinet. The consumer will reuse his during his next purchase.

He fills his can with the desired dose, labels the chosen product, and only pays for what he consumes for topping up or servicing his vehicle.

Mobile, modular, displaying draining information and product labels, and offering cans directly, the BARTENDER Bulk is the exclusive response to bulk needs for DIY draining.

Description

The alternator no. A3259PR is a remanufactured product of "AS" brand. It belongs to the Premium line – the line of products addressed to the customers who are looking for the best quality. The alternator has a LIN plug (COM Communication), 120 Amps, and applies to many models of Ford and Volvo vehicles. The product was remanufactured in the Production Plant of AS-PL using advanced devices, in accordance with high-quality norms and assembly standards for assembling devices using new (OEM) parts. The product underwent strict testing procedures and meet the highest requirements in relation to its assembly and technical parameters. The product has the report with the results of the final test that is conducted at the end of the process of remanufacturing. The report is included in the box with the product.

Preview of new product

Worldwide

Description

The ATEQ VT Truck 2.0 offers functionalities specifically designed for the maintenance of trucks and buses and includes all-new OBD coverage. With an all-new sturdy and compact design, the tool can easily read sensors, even in twin wheels, and can manage up to 22 wheels. The tool is compatible with most truck and bus TPMS sensors and can be frequently updated with new heavy transport vehicles as soon as they are introduced. The VT Truck 2.0 can also program aftermarket sensors specifically for commercial vehicles.

Features and Benefits:

- Global database for trucks, buses and trailers
- Displays all TPMS information on one screen

- Built-in vehicle configuration for on-board diagnostics
- Aftermarket programmable sensor support
- WiFi and real-time updates, powered by Live Sensor

Description

With interactive menus, complete TPMS diagnostic capability, and even built-in support, the VT67 will completely re-imagine the way technicians diagnose and validate TPMS systems. The tool boasts over 30 features and functions, as well as a built-in camera to document any vehicle issues, which can then be added to a complete TPMS report and emailed to the customer.

Features & Benefits:

- Secure Gateway (SGW) ready for Stellantis vehicles
- Save, manage and edit customer jobs and reports on the cloud
- 100% coverage for Domestic, European
- Program and clone 20+ aftermarket sensor brands
- Automatic DOT recognition via OCR, powered by Anyline
- WiFi and real time updates, powered by Live Sensor
- Export and send complete customer reports via email
- TPMS sensor and service kit image library for easy reference

- ID Match functionality to troubleshoot and repair TPM systems
- Tire Management: tread reading, wheel inspection, tire registration
- Read and clear TPMS DTC codes
- Change placard values when swapping tire sizes
- Built-in HD camera for accurate vehicle and wheel inspection
- Complete how-to guides and training videos built in the tool
- Email customer relation support directly from the tool

Brembo Beyond EV Kit

Brand

Brembo

Market(s)

Electric or hybrid vehicles

Launch date

05/2022

Preview of new product

No

Description

The new Brembo Beyond EV Kit consists of specially coated discs and innovative brake pads, substantially enhancing Brembo's Aftermarket offer for electric cars. The latest Brembo solutions, derived directly from OE heritage and expertise, have been specifically designed to combine low environmental impact with the best possible performance and safety. This has been achieved thanks to innovative materials and modern technologies used during the development process.

The Brembo Beyond EV Kit includes a new EV disc and EV pad range, tailor-made for the most popular electric cars on the market. The new components are quieter and more resistant to oxidation and therefore last longer, advantages that all contribute to sustainability. A double-protective treatment helps to prevent corrosion of the entire kit and adds brilliance and appealing aesthetics to the discs. Furthermore, a special copper-free friction material with a galvanized backing plate reduces both dust and road noise when braking.

Safety and durability were central to the design of this new braking solution. Electric cars use regenerative braking in addition to traditional dissipative braking, resulting in reduced use of friction brakes. Over time, this can result in the formation of rust on brake system components that are not used, eroding the safety of the brake system, and increasing maintenance costs. Brembo's goal was to create a brake kit that was quiet and resistant to corrosion, but which also minimized residual drag. The latest range of Brembo EV pads and EV discs meets these needs, transferring many of the technological innovations, materials and treatments introduced by the company for the OE Market.

Braking systems play a key role in shaping the future of mobility and Brembo, as a Solution Provider, is developing new and more sophisticated products that will improve the driving dynamics of this new generation of vehicles.

Description

Following the Dieselgate scandal, the European Union has decided to introduce monitoring software in new vehicles from January 2020. It allows the EU (since January 2021) to monitor the differences between type approval and real consumption according to the distances driven.

The recording is so-called OBFCM (On-Board Fuel Consumption Monitoring).

An interface is required to transfer this data from the vehicles to the European Union databases.

The CAP4350 performs the double interfacing between the vehicle thanks to the EOBD protocol and the data collection and aggregation software of the Periodical Technical Inspection centers thanks to the OTCLAN, Workshopnet (Asanet) protocols...

The interface allows you to validate or not this data transmission only with the customer's consent within the framework of the RGPD law.

The PC/tablet application offers the possibility to seamlessly link the technical control procedure with the OBFCM data upload.

A dongle (as an accessory) offers the possibility of a self-test in order to ensure, over time, its full operational capacity.

Description

Our ESR kit makes it possible to use the energy potential of combustion engine vehicles in the rolling stock by transforming them into VEEP© (Positive Electric Energy Vehicles) capable of generating & storing electricity for domestic use while driving.

We democratize access to self-production of electricity to:

- 1- cover domestic & professional needs,
- 2- reduce energy bills,
- 3- reduce CO2 emissions,
- 4- secure the installations in a simple & fast way.
- 5- increase the resale value of pre-equipped UVs

The “aftermarket” installation on Used Vehicles of our Electricity Recovery & Storage kit (ESR Kit) allows to use the energy lost & unused while driving.

Our ESR Kit is made up of the same technical components as those used in electric or hybrid vehicles (IBSG 48V, DCDC converter, LFP-48V batteries, computer, etc.). But they are integrated and

programmed only to produce electricity up to 80 kWh/km in peri-urban areas during deceleration, braking, under-rev phases, etc.

The electricity is stored in DomiBATT© 48V (1 to 4 kWh) communicating battery packs, transportable or not. Depending on the option chosen, electricity is thus available for use from your vehicle, your home or your workplace through a specific discharge terminal.

Description

FlexFuel Energy Development (FFED) has imagined a different way of looking at ethanol injection to create a box that can read, learn and adapt its operation autonomously.

This is why FFED, after more than three years of R&D and several patents filed, has developed a box with artificial intelligence.

This self-learning technology refines the ethanol injection, allowing it to be adapted to the latest engines and improving the user experience.

For professionals, the installation of the box is made easier and more efficient as it requires fewer manual adjustments. This limits the margin of error for the installer and reduces the time and cost of installation.

Overall, for an initial labour time of two hours, one and a half hours is now sufficient.

Thanks to this new technology, the box covers 90% of the market for petrol vehicles with direct injection engines that are compatible with the installation of a box.

Brand	IK Sprayers
Market(s)	Light vehicles, HGV - LV, LCV, Buses - Coaches, 2 wheeled motor vehicles, Electric or hybrid vehicles
Launch date	05/2022
Preview of new product	Worldwide

Description

The IK FOAM Pro 2 + handheld sprayer is a foam generator designed for cleaning tasks in several industries. This professional sprayer has been manufactured for the generation of dry and durable foam. Designed to be used with chemical agents with surfactant properties.

The sprayer is equipped with three mixers (orange, grey and green) which allow to vary the type of foam by choosing between wet, intermediate or dry foam.

With the use of the foam we manage to increase the contact time between the chemical and the surface to be cleaned, cleaning fabrics and upholstery avoiding excessive soaking which generates the appearance of fungus and bacteria, and finally having greater visual control of the sprayed surface.

The IK Foam Pro 2 has a wide filling mouth, ergonomic design, safety valve set at 3 bar (depressurisable), base for greater stability, coloured caps to identify the contents of the tank, safety lock on the opening

and closing system.

In a particularly advantageous way compared to the original Foam Pro 2, the new Foam Pro 2 + has a compressed air connector, an inlet valve located in the sprayer head that allows the insertion of air into the tank thanks to its universal schrader valve for connectors worldwide.

This valve, which is widely used in the field of pressurized tires, enables the tank to be pressurized by means of generic compressor modules such as those intended for tire inflation. This extra part in the Foam Pro 2 + sprayer makes the pressurization process faster and easier by using widely commercially available devices with no need of manually pumping it.

Description

A shining revolution in technology and design: OSRAM's first LED low beam lamp¹ approved for road use is an innovation leader. Both H4-LED and H7-LED have been approved as a legal retrofit low beam lamp for installation in halogen-based headlights in line with the Road Traffic Licensing Regulations (StVZO). OSRAM, the No. 1 in automotive lighting, developed the NIGHT BREAKER LED from scratch and put it through its paces in collaboration with TÜV-Süd. Approved by the Federal Motor Transport Authority (KBA) for a wide range of headlights and vehicle types, with the NIGHT BREAKER LED, you too can now experience the superior performance of state-of-the-art lighting technology in your car. For a brand-new driving experience day and night.

Benefit from better vision and visibility and at the same time, reduced glare of all other road users. This powerful LED lamp with a cool colour temperature similar to daylight brings up to 230% more brightness² onto the streets. And it also takes the design of your vehicle to the next level! Compared to regular halogen lamps, the NIGHT BREAKER LED also ups the game with its vibration resistance and the fact that it lasts up to 5x longer, ensuring you get more driving pleasure out of it. The quality you expect

from OSRAM – manufactured in a certified OSRAM plant in Italy. Upgrade to LED technology now!

TYREinflate 4000 Cordless Tyre Inflator

Brand

OSRAM

Market(s)

Light vehicles, 2 wheeled motor vehicles

Launch date

10/2022

Preview of new product

Worldwide

Description

Compact rechargeable tyre inflator

The OSRAM TYREinflate 4000 is a rechargeable tire pump with digital backlit display for easier and more accurate pressure measurements and inflation of tires that displays pressure values in BAR, kPA and PSI. The OSRAM TYREinflate 4000 has an internal memory and thanks to the memory function up to four different values for different tires can be programmed and stored. It is also equipped with an auto-stop function: the OSRAM TYREinflate 4000 stops automatically when the correct and preset pressure is reached. Through the included USB-C cable, the OSRAM TYREinflate 4000 is rechargeable, and no 12V outlet is required for power supply, so this is not only for inflating car tires, but can also be used for inflating bicycle, scooter and motorcycle tires. The lightweight and compact design of the OSRAM TYREinflate 4000 makes it ideal for on-the-go use and can be taken almost anywhere. With the included storage bag, simply store in the glove compartment of the car, a bag or rucksack. Thanks to the powerbank-function, the OSRAM TYREinflate 4000 can also be used as a charger for electronic

devices such as e.g. a mobile phone. In addition, the integrated flashlight function can provide illumination at night or in poor lighting conditions. Also included is a 3-piece adapter set that can be used as a connector for bikes, balls and other inflatables with Presta valves. 12V DC cable for power on event of battery charge running low, absolute convenience, charge on the move from your vehicle

Product name

FILTER+pro

Brand

BOSCH

Market(s)

Light vehicles, LCV, Electric or hybrid vehicles

Launch date

05/2022

Preview of new product

No

Description

Bosch presents this year the new generation of cabin filter to the aftermarket: the FILTER+pro. It features an anti-microbial layer that permanently neutralizes allergens and bacteria, and is also effective against viruses and mold growth. In addition, the FILTER+pro consists of a layer of activated carbon that neutralizes harmful and foul-smelling gases, as well as a layer of ultra-fine microfiber that filters more than 98% of fine particles up to 2.5µm.

The new FILTER+pro effectively contributes to the health protection of users: it is the only cabin filter recommended by the French Association for Allergy Prevention (AFPRAL).

It also protects the air conditioning system by reducing deposits, thus preventing the windshield from fogging. This improves visibility and ensures better safety on the road. This new generation of cabin filter can be mounted on thermic, electric or hybrid vehicles. It will gradually replace the previous FILTER+

version by the end of 2023: 26 references are already available.

SOGEFI FILTRATION S.A. / PURFLUX

Location	Pavilion 1, Alley H, Booth n° 030
Product name	CABINHEPA+ CABIN FILTER
Brand	PURFLUX
Market(s)	Light vehicles, LCV
Launch date	09/2021
Preview of new product	No

Description

We know that the pollution inside the vehicle could be 4 times higher than outside. The inside is a confined and often shared space, occupants thus face a higher risk of exposure to a variety of airborne infectious agents and allergens, with possible harm to health.

This is one of the first time in Europe that HEPA filters are installed inside vehicle air conditioning. HEPA stands for High-Efficiency Particulate Air and is mainly used in medical environment.

CABINHEPA+ PREVENTS PARTICLES UP TO 0.3 MICRON ENTERING YOUR INTERIOR.

It is one of the best efficiency of filtration on the European automotive market as per IEST-RP-CC007.1: Filter testing .

- CabinHepa+ filters retain up to 99,97 % of particles up to 0.3 micron and 99,90% up to 0,1 micron (which represents the size of most of viruses) which makes it one of the most efficient filter at sanitizing the air inside the car.

- CabinHepa+ range covers passenger cars and is also focused on LCV as they are mainly used in rescue transportation (ambulances, fire fighters...) for the most-at-risk populations during pandemic situations.

The advantages of Hepa media :

1.HIGH END FILTRATION : CabinHepa+ is composed of a layer of randomly arranged polyester fibers serving as a pre-filtration for large particles.

2.MELT-BLOWN LAYER : The fine particles as small as 0.3 microns are blocked up to 99.97%.

CABINHEPA+ IS A 100% NATURAL FILTRATION THAT FIRMLY PROTECTS AGAINST BACTERIA AND MOLD. Nothing to hide. No addition of antibacterial agent (polyphenol or chemical fruit extract) is necessary to block particles. As the filtration efficiency is high, no chemicals are used. CabinHepa+ can provide purified air to protect people at risk such as babies and elderly with low immunity systems. Hepa media works by mechanical filtration, trapping the particles without using possible harmful chemical. So, the chances of potential respiratory side-effects is 0 with CabinHepa+ even on long term use.

7 PLUS-MINUS CLIP High-voltage device
with ultrasound

Brand

STOP&GO

Market(s)

Light vehicles, LCV, Electric or hybrid vehicles

Launch date

05/2022

Preview of new product

No

Description

The 7 PLUS-MINUS CLIP is the ideal solution for protecting vehicles against martens, weasels and all types of rodents. Very fast and very reliable assembly over time, thanks to the new "CLIP" contact plates. 12V connection to the vehicle. This device works on the principle of an electric fence to keep animals away from the engine compartment of the vehicle. 6 Stainless steel contact plates with insulation displacement connection technology, placed in the engine compartment, produce a harmless but effective electric shock in the event of contact. Thanks to the anti-panic function, the animal has enough time to escape before the capacitor recharges. This avoids permanent electric shocks that could harm the animals. At the same time, ultrasonic waves are emitted regularly in a frequency range reminding the marten of cries of fear and alarms indicating extreme danger. Ultrasounds are emitted in frequency modulation so as to avoid habituation. With this new "CLIP" system, this device can easily be disassembled and recovered to place it in a new vehicle. A bright red LED confirms proper operation of the device. The device is delivered in a ready-to-assemble box with assembly instructions in 14 languages. A "High voltage warning" sticker must be placed prominently in the

engine compartment to warn anyone working on the vehicle. An ignition switch allows the system to be disconnected when working in the engine compartment. Protection by 0.5A F fuse. Power consumption is only 0.4mA. The output voltage on the plates varies between 250 and 300V. Ultrasound emits in a range of 20 to 25 kHz. The ultrasound radiation perimeter is 360° at an opening angle of 170°. The sound pressure is 110dB. Waterproof IP65.

ouverture de 170°. La pression acoustique est de 110dB. Etanche à l'eau IP65.

Description

OptiMate 7 12/24V

'GOLD series', the advanced battery charger for the 12V or 24V deep cycle lead-acid battery in your motor home / RV, boat, craft or your medical / industrial equipment – optimizes deep cycle battery performance!

– Ideal for 12V and 24V deep cycle and high performance marine / dual-use lead-acid batteries found in the vehicles / craft and equipment.

– Select the right charge voltage for your deep cycle or marine / dual use 12V or 24V lead-acid battery, including STD flooded, AGM, GEL & Ca-Ca (lead-Calcium) – Selection remains in memory even if AC power is lost.

- Fully automatic multi-step program brings the battery safely to full charge – Connect to the battery and OptiMate 7 12V-24V brings your battery to a true 100%, no supervision required!

MORE FEATURES:

- Automatically adjusts current to match battery size and condition.
- Temperature compensation: Voltage is adjusted higher when colder, or lower when hotter.
- Safe to leave connected. Full electronic protection.
- Maintains battery at full charge and good health.
- Saves your 'dead' battery from as low as 0.5V.
- Tests battery state of health.
- Voltage safety check: will not charge if battery voltage does not match selection. Requires user confirmation.
- 50% less energy, 50% lower cost.
- v Power Factor Correction
- v Synchronous Rectification
- Weatherproof. Rated for use down to -40°C / -40°F.

Product name

ECOBX 5L

Brand

KENNOL

Market(s)

Light vehicles, LCV, 2 wheeled motor vehicles

Launch date

01/2022

Preview of new product

No

Description

KENNOL's ECOBOX 5L is the future of oil packs.

This cardboard box contains a hermetic pocket of oil filled under vacuum, thus ensuring a 100% pure liquid over time, without contact with the air. This principle also makes possible to easily pour 100% of the lubricant during oil changes or top-ups, unlike a standard can which must be drained for a long time to the last drop.

This cleanliness asset is backed up by a 2nd generation MaxiFlow tap. Thus, no drop escapes between 2 uses. And the flow during a service is very fast and constant, unlike a conventional can. No splashing when pouring into the engine. A gauge on the side lets you check the remaining amount inside.

Regarding the environment, this is a considerable step forward, with 77% less plastic (compared to a 5L can), and 90% less waste to sort. The virtue of its design allows you to simply remove the empty pocket, then flatten the cardboard, all in just 2 movements. It can also travel without overpacking, in order to save on material and transport costs.

Logistically speaking, the advantages do not stop there, with a gain in storage of 40% thanks to its

perfectly geometric shape. And even on the shop shelves, it will satisfy professionals since its facing saves space by more than 30% compared to a standard 5L can.

In industrial process it also stands out. The supplier trucks deliver pallets of flattened cardboard to us, rather than traveling with empty plastic cans! And this packaging ends its life as it began before packing: flat.

Description

Since 2019, automotive professionals have been required to display and inform their customers about the use of second-hand parts in their workshops. Opisto did not wait for this obligation since in 2015, Opisto provided professionals with a dedicated solution allowing them to quickly find a used part adapted to their needs, at a discounted price.

Opisto.pro allows professionals to access 3.7 million reused parts from French end-of-life vehicles centers (scrapyards), from a single website. A real time saver that allows them to no longer call each scrapyard to find a suitable part. Second-hand parts also allow professionals to repair more vehicles and satisfy a wider clientele. By repairing vehicles that were doomed to scrap, due to a lack of availability of new parts or because of excessive cost, professionals are giving their client's vehicles a second life.

Controlled and guaranteed, these parts are a real alternative to new parts and there is no shortage. In addition, their use significantly reduces the ecological footprint of the automotive sector. By promoting recycling, repair professionals now have the possibility of offering a more ecological solution to their customers, and so limit the manufacture of new parts.

Opisto is constantly growing and the number of used part available in real time on opisto.pro is constantly increasing. The number of Opisto partner networks (AD, Atelio, Assercar, etc.) is also growing, allowing more and more professionals to access second-hand parts in just a few clicks. In 2021, opisto.pro recorded growth of +97% in transactions compared to 2020. Proof that the circular

economy is already convincing many professionals, 25,000 of them are connected to the Opisto stock

Description

Additive manufacturing process for all bearings(wheels, two-wheelers, etc) which allows 3D printing of bearing components to replace parts (for old cars ie) and to produce parts at a low volume demand. Since the parts are printed rather than machined from solid there is less material waste which offers a more sustainable production process. Leadtimes can also be improved and there are opportunities for more design flexibility when using additive manufacturing.

Description

Numerous solvent-based and/or labelled cleaning products are used daily in workshops, resulting in risks to the health and safety of operators and the environment. In addition, cans, sprays and aerosols generate large quantities of waste.

The Blue® spray and its Big Blue® filling station are the solution to clean everything in your workshop in a safe, efficient and ecological way. Thanks to the refilling of the sprays and its station, which is mainly made of cardboard, you can considerably reduce plastic waste in the workshop. Its professional, solvent-free and unlabeled formula contains easily biodegradable synergistic surfactants that remove the most stubborn dirt and pollutants in an ultra-efficient way: carbon residues, oils and greases, various deposits... This cleaning spray is powerful, multi-uses, without label & biodegradable.

Its BIB refill station (bulk-type), mainly made of cardboard, allows you to refill your sprays to save money and limit your ecological impact and waste. With the 10-liter station you can refill a spray 20 times and generate 88% less packaging.

Nationwide

Description

Technifap is the 1st French network specialized in the cleaning of Particulate Filters (PF), SCR and catalytic converters in the automotive, heavy duty and agricultural sectors. Over time, the Particulate Filter can become clogged. The vehicle's performance is then degraded. As an alternative to the replacement of DPFs, cleaning is intended to be efficient, ecological and economical. This process meets the energy transition law implemented since April 1, 2019, aiming to offer an alternative to replacing defective parts.

TECHNIFAP machines allow the complete cleaning of the filter in a fully automated unit operating in a closed circuit and without chemicals. Ash and soot are filtered and collected before being recycled by an ISO 14001 company specialized in waste treatment.

No element is released into the environment. The operator works in total safety. The Technifap cleaning process is patented.

Finally, more than 60 partners are part of our cleaning network and use our machines.

Two objectives for Technifap:

- to ensure a cleaning rate of over 95% for anti-pollution systems.

This rate is measured directly by the machine, which provides a report at the end of the cycle.

- Make DPF cleaning the No. 1 choice before replacing new parts.

This goal is in line with our membership in the France Auto Reman network, which aims to make reuse parts the No. 1 option for garages before resorting to new parts.

At the end of 2021, we launched our first ultra-compact machine: the FCM 5000.

With its small size and very competitive price, it fits perfectly in small and medium-sized garages, while allowing the cleaning of anti-pollution systems of cars, trucks and even agricultural machinery.

The process and the duration of the intervention remain unchanged.

Technifap is committed to quality and is ISO 9001 certified.

Worldwide

Description

Which car dealership has never wondered about the costs incurred by exterior carwashing ? Well, Wurth France brings to you its latest, world exclusive concept : « OrsyE-Wash » - the first step towards connected carwashing !

This innovative system connects an electronic sensor to car wash venturis, allowing to accurately track the consumption of cleaning products (such as shampoo or self-drying solutions) in real-time, all while sustaining the proper product dosage.

Site managers then receive e-mails with detailed reports regarding this consumption in order to effectively measure the cost of a car wash.

In addition, tracking the product consumption allows to quantify the amount of solvents and detergents released in wastewater.

Lastly, the electronic sensor facilitates stock management as warnings are automatically sent to site managers when cleaning product barrels are running low.
