

## Growing and caring for rapid-cycling brassicas

Read these instructions carefully before you start.

1. Pipette drops of water from above for the first 2-3 days.

2. On day 4, transplant surplus seedlings to fill any blank minipots.

3. On day 4 or 5, thin to one strong seedling in each minipot.

4. If plants need supporting use ring ties and stakes.

5. Bees pollinate many flowers including brassicas.

6. You may use a dead bee, to pollinate your flowers.
