

The Response of Seedlings to Light

Seedlings growing on a windowsill will often bend towards the window. This bending is called a tropism. But what exactly are the seedlings responding to? This technique will help you to investigate this tropic response.

Read these instructions carefully before you start.

The edges of the hole in the film can may be sharp.

7. Place 3 seeds in the can. Use any small seed, e.g. brassica, white mustard, cress, etc. then put the lid on the can.

8. Label the cans and put them under a light bank.

9. After 3 - 4 days, remove the lid and see what has happened to the seedlings.
