

## Soil, microorganisms and recycling

### Pupil Sheet

### I spy in the soil *(see booklet, page 22)*

Here is a list of things you might be able to find in your soil.  
Have a good look at the soil and put a tick beside anything that you can see.

|   |  |                                  |  |
|---|--|----------------------------------|--|
| whole dead leaves   |  | seedlings or small living plants |  |
| bits of dead leaves   |  | very small animals               |  |
| twigs   |  | bits of dead animals             |  |
| bits of bark from trees   |  | pebbles                          |  |
| plant roots   |  | small bits of rock               |  |
| seeds and fruits  |  | grains of sand                   |  |
| Write down anything else you have found (e.g. paper)  |  |                                  |  |
| Can you think of anything else that might be in the soil? There are two things that all plants and animals need (but you can't actually <u>see</u> them). |  | 1.                               |  |
|   |  | 2.                               |  |
