Workforce Engagement

14th - 20th September
(webinar 20th Sept)

#PlayYourPart

A week dedicated to Workforce Engagement

Seven Days for Safety was brought to you by Step Change in Safety's Workforce Engagement Support Team (WEST). Over the course of the **seven days**, we delivered a range of new engagement skill sets and tools including, films, presentations, interactive resources and discussion culminating in an industry-wide webinar.

How should you use the new resources? Who are they for?

- Users can download and save the folder containing the resources and use them at a time to suit them
- Each resource should take around 30 minutes to watch and use.
- Every new film, presentation and interactive resource has been designed for use at team meetings, safety meetings or breakout sessions during townhall events.

Important: Please ensure you are registered with our website and logged in before you download. The new resources are FREE for all our members but only if your email has been verified on the website (If you experience any difficulty with this please contact info@stepchangeinsafety.net)

If you're ready to commit to making your industry safer, use our Seven Days for Safety resources and #PlayYourPart All resources are available to access and download on the Seven Days for Safety page on the Step Change in Safety website.

Membership feedback

Tell us how we did!

We encourage you to tell us what you liked about the Seven Days for Safety event and, just as importantly, what you think we could do to improve future events by completing this short [feedback form](#)

Seven Days for Safety Webinar

Seven Days for Safety was all about increasing awareness and engagement in key safety topics across our entire industry. A crucial component of making this a successful week was providing the workforce with the opportunity to put their questions and concerns to our panel of subject matter experts:

Emma Thomson, Industrial Hygienist, bp
Allan Smillie, Safety Improvement Coach, TAQA
Steph Sunley, Offshore Logistics Supervisor, Spirit Energy and SI971 Safety Rep
Gordon Craig, Chaplain to the UK Oil & Gas industry
Afolabi Banu Senior HSEQ Adviser, Chrysaor
Chaired by: Steve Rae, Executive Director, Step Change in Safety

Major Accident Hazards

The interactive 'Blockbusters' style game, **Major Accident Hexagons** is designed as a training aid that can be used to educate the workforce on MAHs and process safety, provoking discussion on barriers and the vital role understanding MAHs plays in supporting safe operations.

The aim of the game is to horizontally connect the left and right sides of the board by correctly answering the MAH questions associated with each of the hexagons.

If you get the question wrong, you will lose control of the barrier and your direct path will be blocked.

Mental Health Awareness

Our mental health is in constant flux on a continuum ranging between poor and good health. Throughout our lives almost all of us will experience a full spectrum of mental health as we are all exposed to the triggers that may cause changes from good to poor mental health status. It begs the question, are you aware of how prevalent poor mental health is? Could you recognise signs and symptoms of a change in the mental health in yourself and your colleagues? Would you know who turn to for help?

If you are unsure of any of the answers to these questions, then Step Change in Safety's – Seven Days for Safety – **Mental Health Awareness video** is for you. This short, informative video brings together three experienced mental health experts in a conversational style film covering the simple and practical mental health advice.

- **Gordon Craig,**
Chaplain to the UK Oil & Gas industry
- **Bob Gardiner,**
Senior Medic/HSE Advisor
Taqa Eider platform
- **Brett Townsley,**
Director,
Omniscient Safety Innovations

Safety Rep Essentials

The purpose of these three new films is to further embed the understanding of the support and help that is there for safety reps, offshore workers, supervisors, managers and onshore support teams.

These informative presentations provide safety reps, onshore support teams, OIMs and supervisors with hints and tips along with some of the softer skills that can be used and also meet the legal requirements when it comes to safety representatives and safety committees.

'SAFETY REP ESSENTIALS' FOR ONSHORE SUPPORT PERSONNEL

A new **film** is aimed at the onshore support teams who may not fully understand how much they contribute to the success of safety committees, safety reps and the overall safety at site. Teams such as operations, logistics, IT, HR and legal, heavily influence and enable safe operations by supporting committees to function effectively. This film will help these, and other teams connect with the Safety Rep Essentials guidance. When safety committees have the right information and proper support, they can resolve safety issues quickly and efficiently.

'SAFETY REP ESSENTIALS' FOR OIMs, SAFETY COMMITTEES AND REPS

Safety Reps Film: Elected Safety Reps (ESRs) are the focal point for safety engagement for the workforce. ESRs bring agenda items to the safety committee from the workforce and vice versa. They provide an anonymous method of safety issue resolution while using their training to proactively keep their constituents safe. This film provides greater awareness of the Safety Rep Essential guidance.

OIMs film: Safety Committees are facilitated by OIMs and asset managers as a duty under the SI971 legislation. This responsibility is often given with very little training. To help site managers support safety reps and the safety committee, Step Change in Safety has provided guidance for OIMs and supervisors

Occupational Health

Good Occupational Health is key to your working life, both on and offshore. We will examine the following three topics in turn and hear from subject matter experts.

These topics are:

- Local Exhaust Ventilation
- Potable Water and Legionella
- The Galley

We have chosen these three subjects because they are commonly found to be problem areas during regulatory inspections and, when not controlled or managed correctly, they all have the potential to have an adverse impact on everyone on site. In each of these areas, findings commonly include issues with Training, Management and Supervision.

Sharing and Learning

To continually improve safety, it is essential that we learn from previous incidents and the experiences of others. It is also important to share our own learnings to prevent others experiencing the same.

During Seven Days for Safety, we released a **new Safety Moment** based on the US Chemical Safety Board (USCSB) animated film of the **BP Texas City Refinery** explosion which occurred 23rd of March 2005. The safety moment "Texas City – Could this happen again?" has been designed to provoke discussion around the "Step Change in Safety 7Cs" and includes a short practical exercise.
