

GUIDE: HOW TO GROW YOUR

OWN TOMATOES!

SUNLIGHT: Place your plant where they get at least 6 to 8 hours of direct sunlight every day.

SOIL: Grow your plants in rich, well-draining, fertile soil with a slightly acidic pH between 6.0 and 6.8.

SPACE: Position plants 45 to 60 cm apart in the ground or give each plant its own 30 to 45 cm wide pot.

WATERING: Water deeply at the base of the plant to keep the soil evenly moist while avoiding wet leaves.

FEEDING: Apply a balanced fertiliser at planting and then switch to high-potassium tomato food when flowers open.

FRUIT CARE: Support the heavy stems with stakes and snap off any extra tiny leafy shoots.

HARVESTING: Pick the tomatoes when they are fully and evenly coloured by cutting or gently twisting them off with the stalk intact.
