

The background of the slide features a close-up, low-angle shot of a large, green, textured pipe or duct that curves from the bottom left towards the center. To the right of the pipe, several solar panels are visible, mounted on a metal frame. The panels have a grid pattern and are connected by black cables. The overall color palette is muted, with greens, greys, and a pale blue sky in the background.

# **GLOBAL CCCM CLUSTER ANNUAL MEETING**

## **Connectivity, Energy & Sustainability – breakout session**

**Starting at 15:00 CET**

**Jørn-Casper Øwre** - Project Manager, CCCM capacity - NORCAP

**Christopher Hoffman** - Global Project Manager SMART Rapid Response Mechanism (RRM) at NRC

**Giulio Coppi** - Global Digital Specialist at NRC

**Borja Gomez Rojo** - Energy Project Manager at NORCAP

**Joseph Hwani** - Energy Expert UNHCR/NORCAP

# PANELISTS

## Presentation 1: Connectivity

The background of the slide features a photograph of solar panels mounted on a structure, with a large, green, textured pipe or duct running diagonally across the frame from the top left towards the center. The sky is a clear, pale blue.

## Presentation 2: Energy

OPERATED BY NRC

# Accelerating Clean Energy Efforts

CCCM Cluster

10th November 2020

NORCAP has deployed clean energy and environment experts to provide support to humanitarian and development partners in three core areas:

## IMPROVING ACCESS TO CLEAN ENERGY

- NORCAP experts work to better understand the needs of people and communities in order to identify financially and environmentally affordable energy solutions for any given setting.
- 54% of our total missions is dedicated to this area
- Services we delivered include clean cooking solutions, mini grids for shelters, street lightings, reforestation, biogas production

## GREENING HUMANITARIAN OPERATIONS

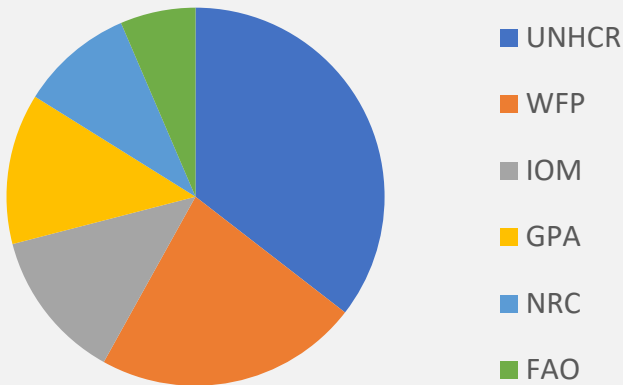

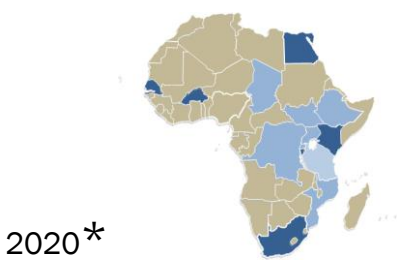

- NORCAP experts work with organisations to help them transition from diesel generators to sustainable energy solutions, such as clean solar power
- 33% of our total missions is dedicated to this area
- Services included energy assessments, solar mini grids, fleet management (switch to electric cars)

## IMPROVING COORDINATION IN THE SECTOR

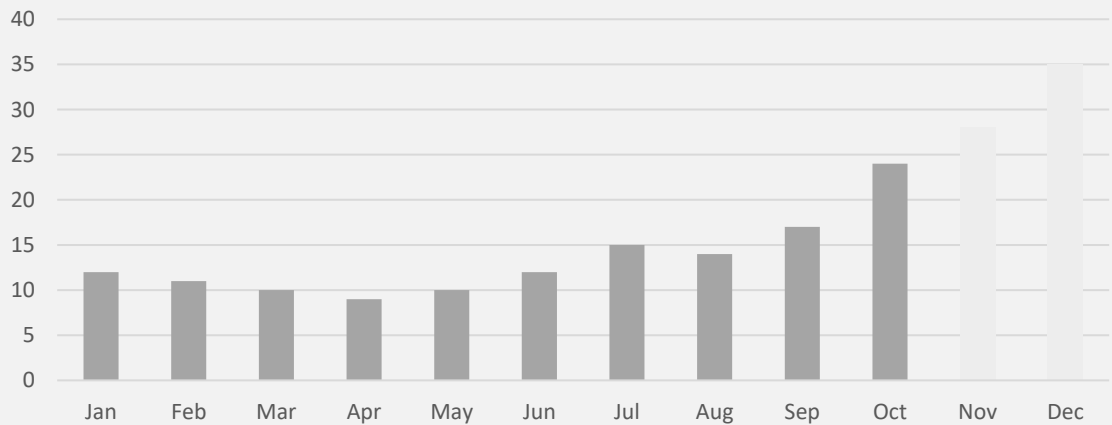

- NORCAP supports efforts to ensure that energy access, which is a critical part of any emergency operation, is clean, sustainable and cost-efficient. To achieve this, we support the secretariat of the Global Plan for Action (GPA)
- 13% of our total missions is dedicated to this area

# GEOGRAPHICAL FOOTPRINT OF THE ENERGY ROSTER

NORCAP energy experts supported missions across Africa through Country and Regional offices, in addition to HQ deployments (Geneva, Rome)

Sustainability & Environmental Concerns in Displacement Sites

Energy in Humanitarian settings

Joseph Hwani, NORCAP

- Energy in emergency settings
- Energy in protracted settings
- Energy in humanitarian settings
- Clean energy is an enabler
- Conclusion

# Energy in emergency settings

- The Policy on Emergency Preparedness and Response (the Policy) states that early investment in preparedness is critical to paving the way for an effective response to emergencies when they eventually occur.
  - ✓ Preparedness includes: a context analysis, planning, gap identification, training and capacity building, partnership development and coordination, and perhaps resource pre-positioning.
  - ✓ At present, UNHCR uses an organic computer database entitled “High Alert List for Emergency Preparedness (HALEP)” to track early warning and monitor preparedness.
  - ✓ DESS is tasked to manage, monitor the database, and (as per its second line of defense duties) inform operations, Bureau and Divisions for operations which are either not activated or is considered under-prepared.

# Energy in protracted settings

- The operations management cycle is the process whereby a UNHCR office organizes its programming.
- "From Assessment to Investment: A Guide to Creating a Pipeline of Clean Energy Access Projects in Situations of Displacement" ,
- A guide to designing a protection-sensitive cooking project in a situation of displacement
- A guide to designing a protection-sensitive lighting project in a situation of displacement
- ✓ Energy programming currently being mainstreamed in to new holistic and integrated approaches recognizing that energy is an enabler and crosscutting.

While conceptually the cycle operates in a sequential fashion (assessment → planning → implementation → monitoring → reporting → auditing → evaluation), in reality certain phases often take place simultaneously (e.g. assessment and implementation) or repeatedly (e.g. monitoring throughout the year, reporting at mid-year and year end) depending on the situation and the operational realities

IRENA led preliminary Energy needs assessments and supply options analysis for Ethiopia (Darashakran and Domiz camps) and Iraq (Sherkole and Tsore camps). These assessments fully articulate energy needs and potential interventions on energy efficiency and renewable energy.

-Efergy E2 monitor installed in a distribution box

IKEA Foundation has funded a 10M EUR Renewable Energy for Refugees (RE4R) project that is being implemented in Jordan and Rwanda, in partnership with Practical Action (a UK based NGO) and NRC. The project aims to improve access to electricity for households, public institutions as well as communal places and promoting clean cooking solutions, through innovative market-based approaches.

Improvised torches made from salvaged non-rechargeable batteries and affixed to a roof beam to provide space lighting.

# Energy in Humanitarian settings

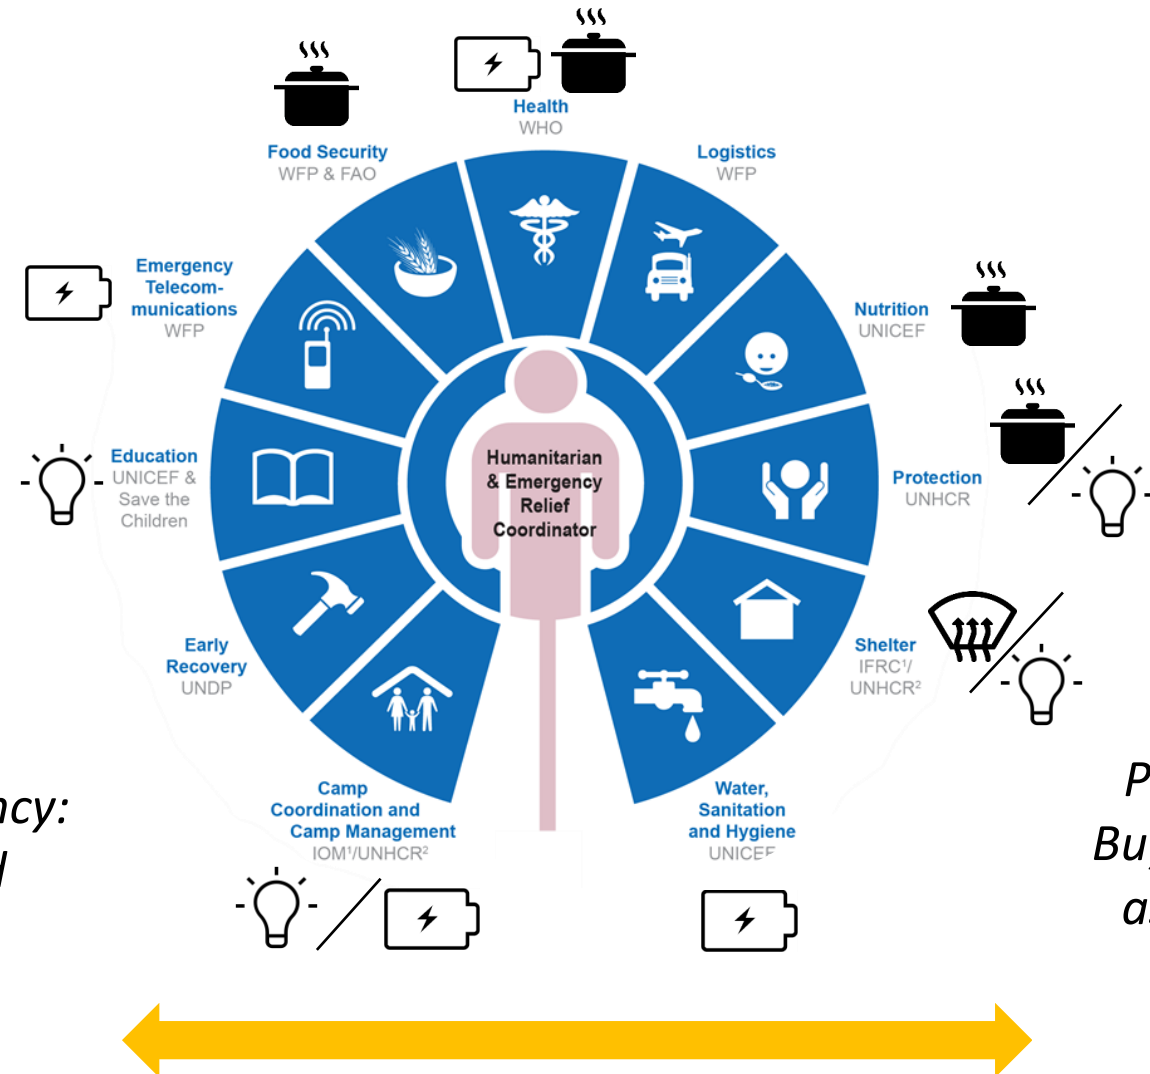

Where Does Energy “Fit?”

Answer: Everywhere

*The GPA aims to support clusters to integrate sustainable energy practices into programing*

*Acute emergency:  
Procure and  
provide*

*Protracted:  
Buying energy  
as a service*

# Clean Energy is an enabler

- Achieving SDG7 (ensure access to affordable, reliable, sustainable energy for all) enhances high level emergence/crisis preparedness and transition from emergency/humanitarian to development.

## ✓ **Health and Nutrition**

Hospitals and health centres, food preservation, laboratory tests, cooking etc.

✓ **Shelter and infrastructure** – household and public places lighting, cooking, thermal comfort, electrification etc.

✓ **WASH** - personal hygiene, drinking water, wellbeing, cooking, growing food etc.

✓ **Jobs and livelihoods** – productive end uses

✓ **Security and Communication** - phones, radio stations, public messaging systems, FM signal boosters and boosting WiFi hotspots, TVs etc.

✓ **Education** – conducive learning and teaching environment, teaching aids etc.

# Conclusion

- Mainstream energy in to Humanitarian/emergence programming
- Clean Energy Challenge 'Project Market Place'

The background of the slide features a photograph of a large, green, textured pipe or duct running diagonally from the bottom left towards the center. To the right of the pipe, there is a vertical array of solar panels mounted on a metal frame. The panels are dark with a grid pattern. The sky in the background is a clear, light blue.

## Presentation 3: Sustainability

The background of the slide features a low-angle shot of a large, green, textured pipe or duct on the left, and a vertical array of solar panels on the right. The solar panels are mounted on a metal frame and have a grid pattern. The sky is a clear, light blue. A semi-transparent white banner is overlaid across the middle of the image, containing the title text.
