

293,677 Individuals

60,568 Households

148 Sites
134 Makeshift Sites
14 Collective Centres

During May, the number of IOM-supported displacement sites increased from 80 to 148 sites as Acted scaled up its targets under its partnership with IOM. Measures were taken to reduce and mitigate rodent infestations in IOM-supported sites.

ACTIVITIES & KEY ACHIEVEMENTS

17
Trainings

CAPACITY STRENGTHENING

Strengthening local capacity for sustainable site management

A total of 17 site management committee capacity strengthening sessions were conducted to strengthen community-based decision making and improve coordination within displacement sites.

111
Meetings

COMMUNITY MEETINGS

Ensuring community concerns shape site decisions

Community meetings were conducted across targeted sites to support community participation, site governance, and coordination activities. The sessions focused on committee engagement, community-led Initiatives, cash-for-work processes, and site needs and priorities.

107
Sessions

AWARENESS SESSIONS

Facilitating informed decision making

Awareness sessions were conducted on feedback mechanisms, cash-for-work, psychosocial support, UXO awareness, and first aid for site residents.

74
Activities

SITE IMPROVEMENTS

Improving shared spaces and site infrastructure

Site improvement activities were conducted across sites to address unsafe and unhealthy living conditions. Activities included cleaning, drainage works, debris removal, and rehabilitation works to improve safety, accessibility, and overall site conditions for residents.

ONGOING ACTIVITIES

Regular site monitoring is conducted up to two times per month in order to ensure that population figures, service access levels, and priority needs are up to date.

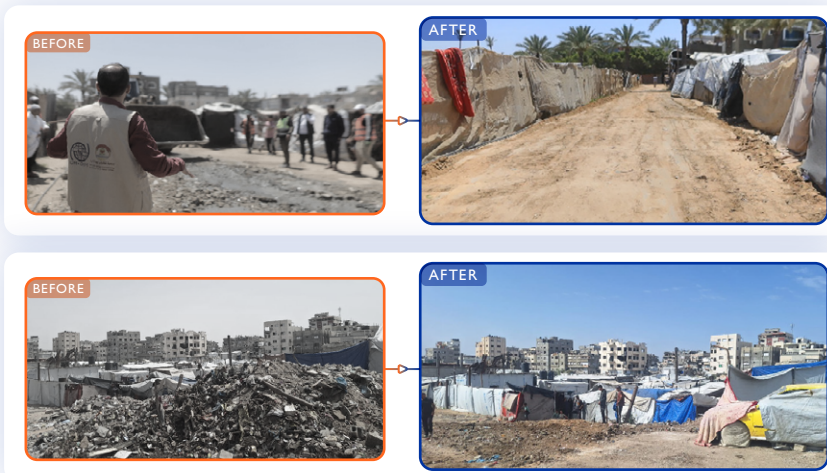

Ongoing coordination with partners to ensure effective site management and up to date service and infrastructure mapping.

Referrals remain ongoing across sites, with high-priority needs identified through site visits and community meetings and referred to relevant organizations for direct support.

Participatory site safety audits highlight risks within the site as prioritised by the community members, site improvement works are implemented to mitigate these risks.

SUPPORTING SITE REHABILITATION AND HOUSEHOLD INCOME AT AL HAYAT SITE

At Al Hayat Site, the Norwegian Refugee Council (NRC), with support from IOM, implemented a cash-for-work (CFW) initiative that combined income support with essential site rehabilitation. The programme engaged 20 residents in paid activities, directly improving living conditions for the wider community.

Workers, equipped with provided tools, constructed drains, closed hazardous pits, maintained tents, and cleaned areas around the site. These interventions enhanced safety and accessibility, reduced protection risks, and improved overall site functionality and cleanliness. The project also provided critical short-term income during a period of economic vulnerability. To complement these efforts, female-headed households identified through safety audits received solar lanterns, improving safety and mobility, particularly at night.

As part of NRC's broader site management activities targeting 30 sites with support from IOM, the intervention at Al Hayat contributed to improved living conditions, strengthened resilience, and enhanced dignity for displaced communities.
