in top quality**

„Enter our world...

 **BERTSCH HOLZBAU**  
LOG CABIN CONSTRUCTION ■ PREFABRICATED BUILDINGS ■ POST-AND-BEAM CONSTRUCTION

... of fascinating designs for everyone”

## ■ Zuluna range is not limited to log cabins for warm weather only.

Be surprised by versatility of our products! Discover our range of high quality buildings and let yourself be inspired!

## ■ About us

Dear Customers, for more than 20 years we manufacture top quality, unique wooden products in almost all variants, now with pre-assembled wall panels with weather resistant cladding.

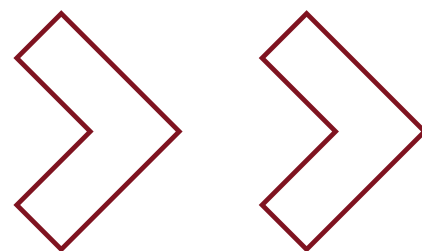

Coniferous timber used by us is sourced from north Scandinavian woods, free from discoloration, blue spots and only with few healthy knots; it is dried to moisture levels approx. 16%. As per motto „if you stop wanting to get better, you stop being good” we aim to create buildings as per customers’ wishes. Let yourself be inspired to design your own building.

If you cannot find a model for your needs, we are able to create a bespoke building as per your requirements.

We wish you much joy in realizing your own dreams.

## Transport

We deliver ordered buildings via articulated lorries.

Please remember that the delivery place has to be reachable by a lorry up to **40 tonnes**, **4 m height**, **16,5 m in length** and **2,45 m width**.

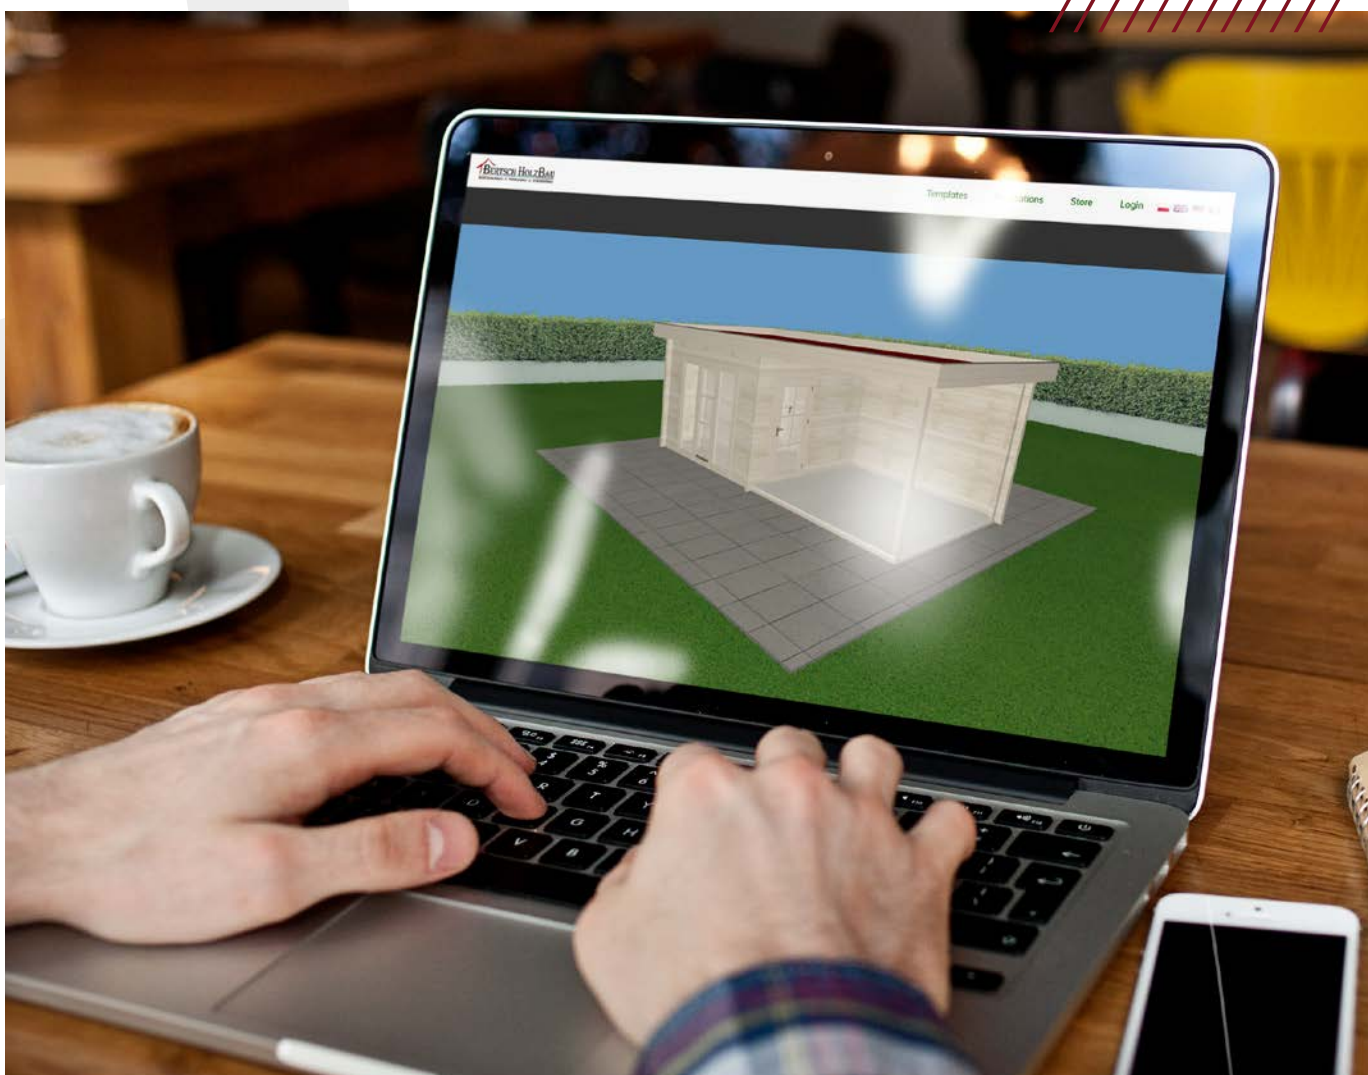

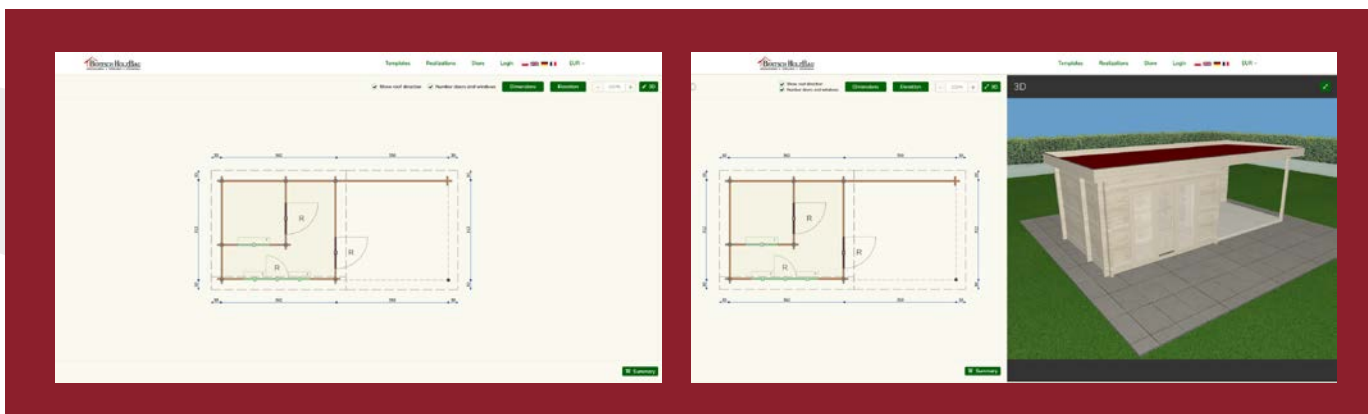

## Couldn't find a building in our Zuluna range? Then please try our BHB Configurator, where you can design your own building!

In our BHB Configurator you can create a wide range of bespoke designs, like tool sheds, garden buildings, open pavilions, carports and garages.

After creating the design please contact a dealer of BHB products, who will present the price offer for you.

In case of designs which cannot be created in our configurator, we encourage you to contact a dealer of BHB products.

Our configurator is suitable for desktops and laptops, but is not optimized to work on smartphones and tablets.

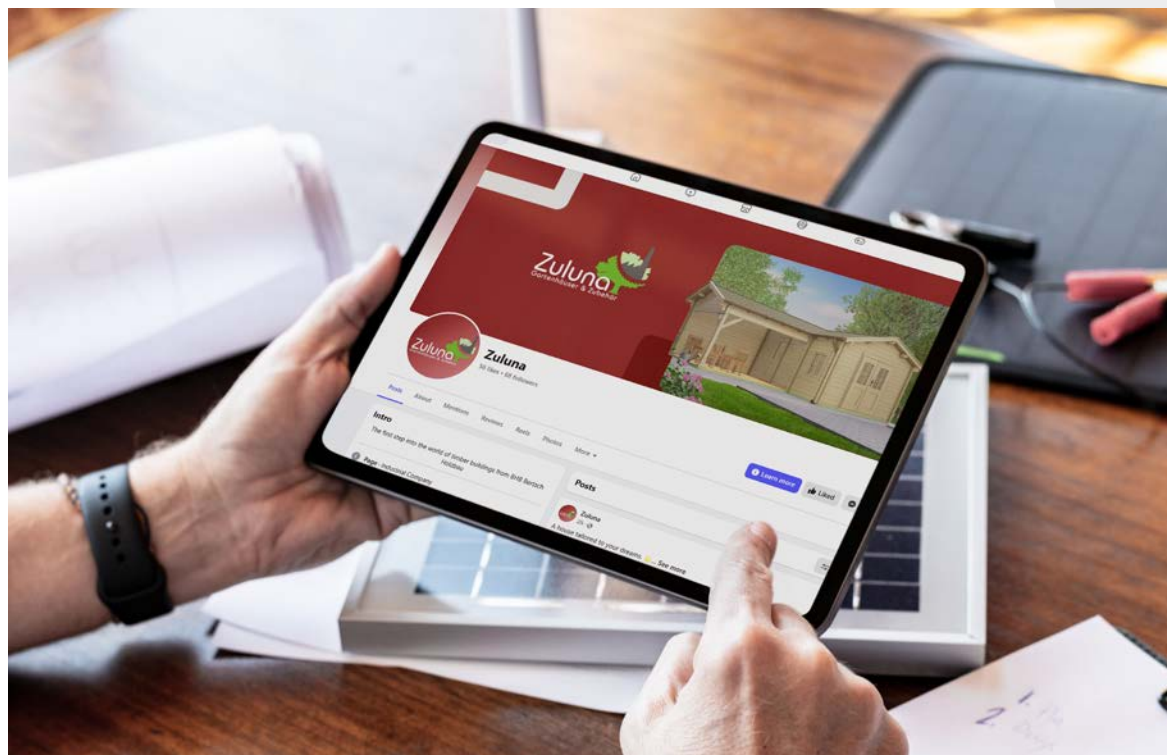

## WEB

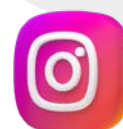

While floor plans are not displayed in the brochure, you can still view them by scanning QR codes. These will direct you to the web page of a given model, where floor plan is available for download.

Sizes: 110x92cm

Doors in ZULUNA Houses open to the left as standard. Right-opening doors are available for an additional charge.

### Bitumen shingles

Order also shingles to protect your roof and building from weather conditions from the top. You can choose rectangle shingles in red, green, black, blue or brown colour or rounded shingles in either red or black.

**Rectangle shingles**

**Rounded shingles**

### EPDM sets

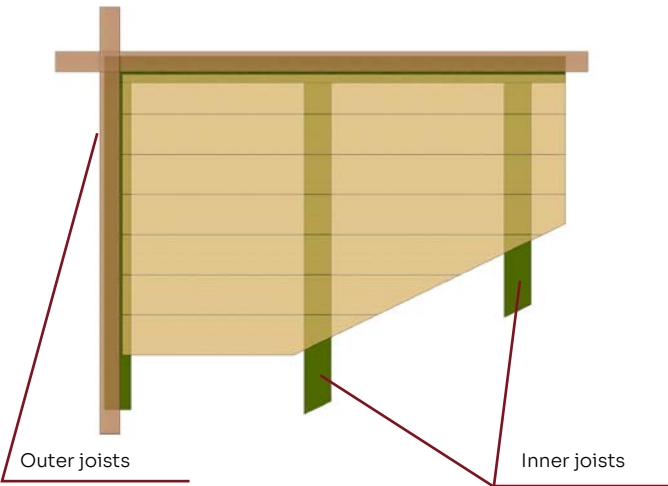

EPDM sets are optional accessories for all our flat roof models. EPDM set includes foil and two types of glue. Besides foil set, a downpipe F1 (up to 200 cm of side wall height) or F2 (for side walls higher than 200 cm). Every downpipe includes fixing elements, including inlet.

(only with U-shaped wooden fascia tops) for EPDM foil:

- RAL 7024 Graphite Grey ①      ◦ RAL 9005 Deep Black
- RAL 8017 Choco Brown ②      ◦ RAL 9006 White Aluminium

### Foundation construction

Foundation frame together with 19 mm floor boards

Wall thickness 28 mm  
Outer joists: 6/6 cm  
Inner joists: 6/4 cm

Wall thickness 45 mm  
Outer joists: 6/8 cm  
Inner joists: 6/4 cm

## Base Type 1

For buildings up to 380 cm x 380 cm

1. Mark the area and excavate to approx. 15–20 cm depth. The area should be 25 cm larger than the area of the building itself. Take into account the size of terraces and extensions.

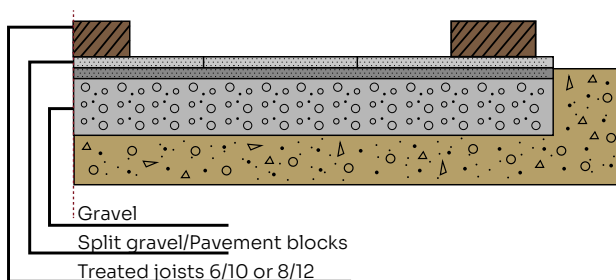

2. Infill with gravel to a depth of approx. 10–12 cm. Compress the gravel to avoid movement.

3. Overlay with split gravel to a height of approx. 3–4 cm. Level the surface.

4. Lay the paving stones (approx. 4–5 cm high). Make sure these are level.

5. Place the pressure-treated joists 6/10 (or 8/14) cm. Make sure the timbers are at the same height. Take into consideration pipes for electric cables.

**ALL FOUNDATION TYPES HAVE TO BE PROTECTED FROM FROST**

## Base Type 2

For buildings up to 400 cm x 400 cm

1. Mark the area and excavate to approx. 20 cm depth. The area should be 25 cm larger than the area of the building itself. Take into account the size of terraces and extensions.

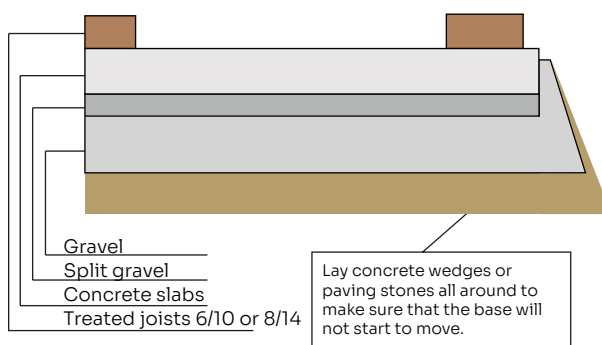

2. Infill with gravel to a depth of approx. 7–10 cm. Compress the gravel to avoid movement.

3. Overlay with split gravel to a height of approx. 3–4 cm. Level the surface.

4. Lay the paving stones (approx. 4–5 cm high).

5. Place the pressure-treated joists 6/10 (or 8/14) cm. Make sure the timbers are at the same height.

Take into consideration pipes for electric cables.

## Slab Foundation

1. Mark the area and excavate to approx. 15 cm depth. The area should be 25 cm larger than the area of the building itself. Take into account the size of terraces and extensions.

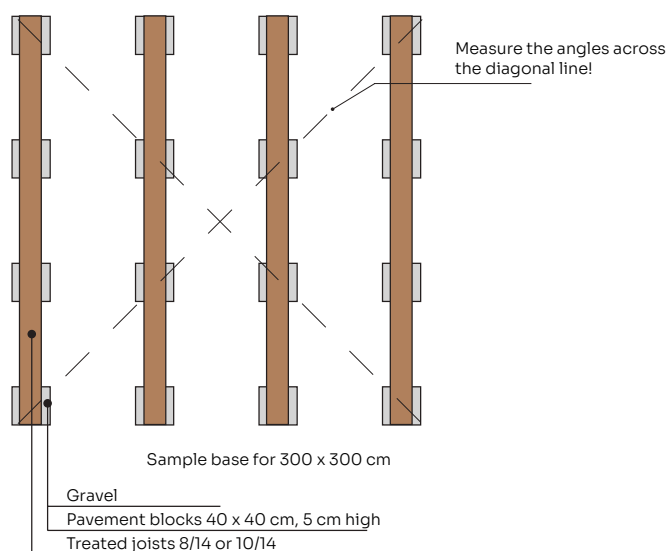

2. Infill with gravel to a depth of approx. 6 cm. Compress the gravel to avoid movement.

3. Overlay with split gravel to a height of approx. 3–4 cm. Level the surface.

4. Lay the paving stones (approx. 4–5 cm high). Place them horizontally.

5. Place the pressure-treated joists 6/10 (or 8/14) cm. Make sure the timbers are at the same height.

Take into consideration pipes for electric cables.
