- Diagnostics and Fault Finding
- Genuine Morgan Motor Co Parts

- Morgan Valeting & Detailing
- Chassis Waxoyl Treatment
- Free Courtesy Car

In our Workshop

During the past 12 months Techniques has been rebuilding a Morgan +8 to a very high specification. This Morgan was brought to us completely stripped by a German customer and we are now nearing completion.

A new chassis and a 5.0 litre JE engine, coupled together with a Tremec 5 speed gearbox were installed. SSL

front and 5 link rear suspension were also fitted. Other upgrades include an aluminium fuel tank and radiator built to Techniques specifications.

With the paintwork and a recent rolling road test completed, we are now looking forward to driving the Morgan on the open road very soon.

BTR Axle Shaft set, incl. Collars & Bearings – per set £696.00 + VAT

Aluminium Radiators

We now stock aluminium radiators, including heavy duty cooling fans, for most Morgan models.

They will dramatically improve the cooling and running of your Morgan even in extreme conditions.
