FAST AND POWERFUL

Streamline your operations with a single-unit scanning receiver that does the work of multiple devices. One G*flex* scanner has the power to test 120 5G channels simultaneously across mmWave and sub-8 GHz bands. You can even add 4G measurements with zero degradation in performance.

Test Up to 120 5G Channels Simultaneously

FUTURE PROOF

Maximize your investment with a scanner designed for 5G and beyond. The expanded mmWave and sub-8 GHz range covers every 5G band[2]. With a 20/100 MHz wide step IF filter, it's also the first purpose-built drive test/walk test scanner that measures the full 5G bandwidth.

Measure the Full Channel on Every 5G Band[2]

PORTABLE & CONVENIENT

Save time and simplify setup with a single lightweight, compact scanner unit for complete 2G-5G indoor and outdoor testing on every operator network. The G*flex* is easy to integrate into your test setup, with support from multiple software platforms. It even includes a hot-swappable battery pack for easy all-day walk testing.

Benchmark Multi-Operator 2G-5G with One Unit

FLEXIBLE

Get the accurate data you need in any testing scenario, including I/Q testing for government applications such as signal intelligence. The field-upgradeable G*flex* scanner supports a wide variety of network configurations, including 5G dual polarization beamforming, 4G/5G dynamic spectrum sharing, and every 5G SSB beam periodicity.
