

Hi - I'm new to ChatGPT. Can you explain in a few lines how it works

Certainly! ChatGPT is a language model developed by OpenAI called GPT-3.5. It uses a deep neural network with 175 billion parameters to understand and generate human-like text. The "GPT" stands for "Generative Pre-trained Transformer," highlighting its ability to generate coherent and contextually relevant text based on the input it receives. It's trained on a diverse range of internet text and can perform various natural language processing tasks, making it versatile for tasks like answering questions, engaging in conversation, language translation, and more. Users interact with ChatGPT by providing prompts or questions, and it generates responses accordingly. Keep in mind that while it can be impressively capable, it may not always produce perfectly accurate or contextually appropriate responses.
