Dr Yael Adler

Skin Deep

- 200,000 copies sold, No. 1 best seller

September 2016, 336 pages

Skin is our daily preoccupation: general care, sensitivity, allergies, anti-ageing, sun...it is barely two metres square and envelops everything we carry inside us. It makes us snatch back the hand that grab a blade the wrong way round, prevents us from getting too cold or too hot and protects us from harmful intruders. No stimulus, no sex - without our skin. In her book, as entertaining as it is informative, the TV dermatologist, Yael Adler, gets to grips with our skin and explains everything we could want to know. She doesn't hold back from talking about pimples, wrinkles, smelly feet and various other subjects we tiptoe around. She explains with enthusiasm why sex is good for our looks, why men don't get cellulite and why our skin's got plenty of brains.

With b/w illustrations by Katja Spitzer.

English proposal and sample chapter available.

The author:

Yael Adler (born in 1973 in Frankfurt am Main) is a doctor, health care researcher, writer and presenter. She has a strong presence on TV, radio and print media as expert on health care.

Adler studied Medicine at the Johann Wolfgang Goethe University in Frankfurt am Main and the Berlin Free University, graduating in 1999 from the University Clinic of her home town. In 2003 she completed her training as specialist in ailments of the skin and in sexually transmitted diseases followed by additional training in Phlebology (2004). Since 2007 she has been resident dermatologist in her own private practice in Berlin and, since 2009, has also worked at the Berlin-based European Prevention Centre and Heart Institute. She is a member of the expert panel at the German Federal Chamber of Pharmacists.

Since 2003 Dr Adler has been on a host of different German TV channels, presenting on several programmes.

Dr Yael Adler

We don't talk about such things

- The new book by no. 1 best selling author Yael Adler
- No. 1 SPIEGEL best seller list

September 2018, 368 pages

Everything about our body's taboo zones

In contrast to laws, taboos are rarely discussed or documented in public. Rather, they are rules practiced in silence. However, they can powerfully govern our lives and be quite practical because they give us a framework for our thoughts and deeds. Let's be honest, sometimes it's quite nice to not have to worry about whether something is wrong or right, appropriate or improper all the time.

But taboos often constrain us and can be life threatening. Especially when it concerns our bodies: about hygiene, strange knobs or pustules, unpleasant smells or noises that our body happens to produce, which can, however, also be a sign of a serious illness, and of course almost everything to do with sexuality.

With b/w illustrations by Katja Spitzer.

Detailed English exposé available.

Prof Ulrich Dirnagl / Dr Jochen Müller

I Think I've Been Hit

November 2016, 320 pages

The brain is our body's control centre, as every child knows. But how does this box of miracles enable us to see, feel, speak and think? Professor Dirnagl from the organisation known as Berliner Charité and Science Slammer Jochen Müller have joined forces and explain how the brain functions by using six neurological conditions as examples. These include dementia, stroke and epilepsy. Any breakdown in brain function reveals something to us about how it works when it is healthy. A stroke, for example, shows what a magnificent organisational talent the brain is. If, for example, a patient loses the ability to speak or walk, we are able to identify where in the brain these functions are located.

With b/w illustrations.

The authors:

Jochen Müller was born in Kassel in 1976. After studying Biology at Göttingen, he went on to graduate in medical neural science in Berlin. After this he spent six months in Canada doing research before returning to Berlin. It was here that he met Professor Ulrich Dirnagl while working as a science researcher at the Professor's Institute. Jochen Müller lives in Berlin, organises and presents Science Slams both at home and abroad, and also works as a journalist on the subject of science in publications such as dasGehirn.info and ZEIT Wissen.

Ulrich Dirnagl, born in Munich in 1960, is a doctor and neuroscientist. Since 1999 he has been Professor of Clinical Neuroscience and Head of the Department of Experimental Neurobiology and, since 2008, Director of the Centre for Stroke Research in Berlin.

In addition he is Clinical Coordinator of the Excellence Cluster NeuroCure and Clinical Coordinator at the German Centre for Neurodegenerative Diseases at the Berlin site. Ulrich Dirnagl is also passionate about skateboarding and was the German Freestyle Champion in 1976!

Dr Julia Fischer

Medicine Of Emotions

- Fascinating: which feelings determine our personality
- Simple: complex biochemical processes are explained understandably and entertainingly
- Competent: Dr Fischer is a doctor and a passionate collector of knowledge

May 2020, 256 pages

Pop science for powerful feelings

Broken hearts, tears of happiness, goosebumps!
What really lies behind our emotions

Powerful feelings can be wonderful. Or dreadful. Or even both at the same time. Since sometimes, you want to cry tears of happiness. Julia Fischer describes how emotions come about, which biochemical processes occur in our bodies and how we can use this knowledge to help ourselves. What do a broken heart and cold turkey have in common, why do we have a tendency for knee-jerk reactions when we are under pressure and why is it not advisable to make decisions when we are “hangry”: Entertaining, informative and rather cheeky, Julia Fischer takes us on the emotional roller coaster and shows us why we want to ride on it again and again.

English sample translation available.

The author:

Dr Julia Fischer, born in 1984, is a doctor, journalist and presenter with an insatiable curiosity for medical and scientific topics. Her biggest passion is presenting them competently and entertainingly, for example in her radio spots, “Medizinische Notizen mit Dr. med. Julia Fischer” (medical notes with Dr. med. Julia Fischer) on Radioeins or her contributions for rbb TV. She lives with her family in Berlin.

Christine Gitter

Ask Your Pharmacist about Risks and Side Effects

- An inspiring and informative journey through the fantastic world of medicine
- Including the Gitters' home medicine cabinet

May 2019, 288 pages

The most entertaining side effects leaflet in the world

With more than 20 years pharmacy experience, Christine Gitter is an expert on the topic

Pharmacist Christine Gitter knows them well: the questions and worries of everyone who visits a pharmacy. How am I supposed to swallow such a huge capsule? How do the painkillers for headaches know that they should go to my head? Is there a vegan version of these pills? Now she is presenting her collected pharmaceutical knowledge. Clearly and with a twinkle in her eye, she explains the complex correlations, shows simple tricks and shares her ingredients for the perfect home medicine cabinet. And what is more: Christine Gitter shares the knowledge that we need to safely and competently handle medicines. The only side effects of this book: an incredible learning curve increase and good entertainment.

The author:

Christine Gitter, born in 1970, worked for more than twenty years in a pharmacy; sixteen of which she was the owner of the second oldest pharmacy in Germany. Through innumerable conversations with her customers she has become acquainted like no other with the questions and worries on the topic of pharmaceuticals. The author lives with her family in Regensburg.

Christine Gitter

Is That Healthy Or Can It Go?

- A revealing expedition into the tricky world of dietary supplements
- Many practical tips
- With over 20 years experience in a pharmacy, Christine Gitter is an expert

May 2020, 288 pages

Pills, powder and power foods - what helps and what damages

Absolutely EVERYTHING about supplements

Magnesium, vitamin B12, Vitamin D - one in three Germans use dietary supplements to care for their body and soul. But is what we take with high expectations really healthy?

Experienced pharmacist Christine Gitter gives competent and entertaining answers to all relevant questions: Do vitamins make you clever? Do the right dietary supplements really increase our productivity? Are natural vital substances better than synthetic ones and are expensive products better than cheap ones? Is it dangerous to take them together with medication? Can we safely do without one or the other tablet? A real must for health-conscious people: everything about dietary supplements, descriptively explained, humorously told and very easy to follow.

The author:

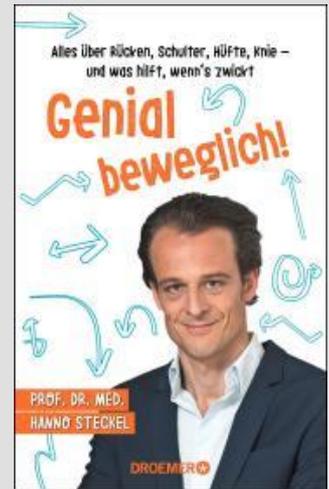

Christine Gitter, born in 1970, worked for more than twenty years in a pharmacy; sixteen of which she was the owner of the second oldest pharmacy in Germany. Through innumerable conversations with her customers she has become acquainted like no other with the questions and worries on the topic of pharmaceuticals. Prof Hanno Steckel

Superbly Moveable

- The human musculoskeletal system is a source of both fascination and suffering
- - The author is a renowned orthopaedist and an expert with media experience
- - For readers of popular medicine, sports enthusiasts and couch potatoes

April 2018, 320 pages

After “*Haut nah*” and “*Darm mit Charme*” finally understand how we move

Our musculoskeletal system is a marvel. Thanks to the perfect interaction of 100 joints, 200 bones and 600 muscles, we can freely move around like hardly any other living creature. This complex system of organs lends us our posture, influences how we are perceived by those around us and reflects our emotional well-being. It affects all of our day-to-day lives like few other aspects of our body. It can be seen in the painful statistic that a quarter of all sick leave is caused by muscle and skeletal disorders. Prof. Dr. med. Hanno Steckel explains the human musculoskeletal system in this popular and entertaining non-fiction book.

The author:

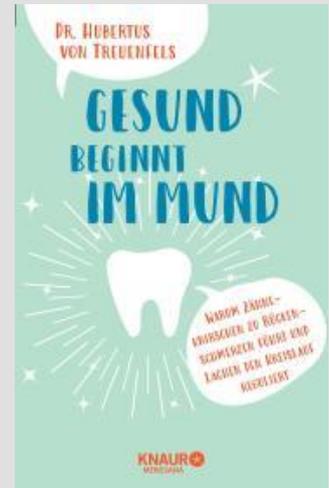

Prof. Dr. med. Hanno Steckel, a specialist in orthopaedics and trauma therapy, is shareholder in the *Orthopädisch-Chirurgischen Zentrums MVZ-Vitalis* (orthopaedic surgery centre) in Berlin-Buckow and is also an external Professor at the University of Göttingen. As a knee specialist with international experience, he performs more than 500 operations each year.

Dr Hubertus von Treuenfels

Healthy mouth, healthy you

January 2017, 240 pages

Dr Hubertus von Treuenfels is renowned throughout Europe for his work as systemic dental specialist and orthodontist. He now presents the first book of advice and guidance on the fascinating, and previously unknown, interplay of the mouth, the body and the mind. We accompany him on an intriguing journey into this key part of the body as he offers clear explanations and describes amazing case studies from his many years in practice. His experience means he enables us to use self-help as our tool in taking on the major part of our healthcare and healing for ourselves.

The author:

Dr Hubertus von Treuenfels is a holistic dental specialist and orthodontist with his own practice in Eutin in northern Germany. He is the author of the NUK manual and numerous scientific publications. As an expert on systemic orthodontics he delivers lectures all over the world as well as at the University of Basel Faculty of Medicine.

Sleep Works Miracles

- Sleep is the body's most important relaxation, repair and revitalisation programme
- Common complaint: one in three of us sleeps badly, and one in four sleeps too little
- With a three week programme for a healthy slumber

November 2018, 336 pages

Sleep is not a luxury, it is essential. Sleep expert Hans-Günter Weeß explains this amazingly multi-faceted natural state that benefits our health, improves our memory and looks after our appearance. Furthermore, he reveals what happens to the body during the sleep phase, how sleep changes with age and how it is different for men and women. He busts common myths, describes the basics of good sleep and examines disorders concerning falling asleep and sleeping through as well as all kinds of sleep killers: snoring, restless legs, nightmares, mobile phones and the modern lifestyle. For only those who really switch off on a night, go through life fully awake.

The author:

Dr phil. Dipl. Psych. Hans-Günter Weeß is a psychological psychotherapist and somatologist. He heads the sleep medicine department at the Pfalzlinikum in Klingenmünster and is a lecturer at the University of Koblenz - Landau (WiPP). Since 2008, he has been a member of the board of the German Sleep Society (DGSM). He has written numerous professional publications and now he explains to the general public everything worth knowing about sleep.

Prof. Dirk Bockmühl

Gems at Home

- Deliciously clever, fun reading for allergy sufferers, phobics, clean freaks and those who hate cleaning

August 2018, 288 pages

They are in us, on us and around us: germs – bacteria, viruses and fungi. Some of them are essential to our lives, others are just annoying and there are also some that are very dangerous. In a wonderfully clear manner, Professor Bockmühl holds a hygiene clinic that delves deep into the fascinating world of our invisible tenants, and explains all you need to know about them. On a microbiological tour of our home, we discover that biofilm has nothing to do with TV, are informed how we can protect ourselves from the attack of the “killer cloths” and learn to look at our toilets in a completely different light

The author:

Prof. Dirk Bockmühl, born in 1972, was already researching germs for his doctorate. In his thesis, he investigated the pathogenic mechanisms of the yeast fungus *Candida albicans*. In 2012, he received the title of professor for hygiene and microbiology at the Rhine-Wall University of Applied Science in Kleve. The author lives with his family in Wuppertal and during the week, he lives with two colleagues in Kleve in a shared house where unusual hygiene concepts are “scientifically” tested.

Prof. Dr. Axel Buether

The Mysterious Power Of Colours

- Colours greatly influence our well-being and health
- With the newest research findings from science and culture
An entertaining book of very useful knowledge

May 2020, 304 pages

The 13 basic colours of emotions - how colours affect us

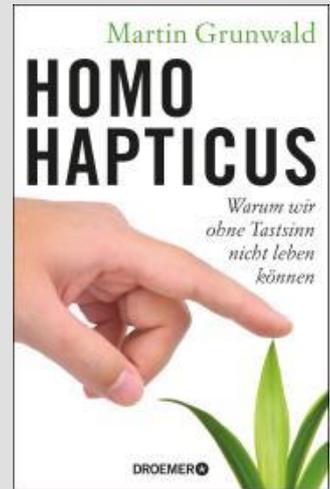

When we open our eyes, we see...colours! The world is colourful, yet colours only make up one percent of what we consciously process. Prof. Dr. Axel Buether, Germany's leading expert on colours, investigates the secret of colours. He reveals them to be the greatest communication system on Earth, shows how they shape our culture, secretly control our behaviour and influence our health. Above all he reveals how colours influence our psyche. In addition, Buether decodes the effects of the 13 basic colours on our emotional and social life. An informative and exciting colour panorama with surprising findings from the most recent colour research.

The author:

Prof. Dr. Axel Buether, born in 1967, studied architecture and gained a doctorate in the topics of neuropsychology and environmental design. In 2006, he became chairman of the Deutsche Farbenzentrum e.V. (German colour centre), and from 2006 to 2012 he taught at the Burg Giebichenstein University of Art and Design Halle. Since 2012, Buether has been professor of didactics of visual communication at the University of Wuppertal.

Dr Martin Grunwald

Homo Hapticus

September 2017, 288 pages

Why we can't live without our sense of touch

Graspable science: 'Feeling and touching is far more important to our survival than seeing, hearing, smelling and tasting,' says Martin Grunwald.

In 2008, he founded the Haptic Laboratory at the Paul Flechsig Institute for Brain Research at the University of Leipzig. There he researches the effect of the human sense of touch, develops therapies for psychic based disorders of body perception and as founder of haptic design worldwide, advises industrial producers on the design of their new products, appliances and packaging.

In 'Homo Hapticus', the experimental psychologist explains to a wide audience, which outstanding influences the long underestimated sense of touch has on all areas of life. Using numerous examples from everyday life, the internationally renowned pioneer of haptic research vividly relates how fascinatingly the millions of touch and motion sensors that represent our feel and taste organs work together. He shows what great biological and psychological significance skin touch has for humans of all ages. He reveals how cleverly product designers handle our haptic perception. He warns of a world full of touchscreens - as with them the world cannot be 'grasped'.

The author:

Dr Martin Grunwald, born in 1966, founded the Haptic Laboratory at the Paul Flechsig Institute for Brain Research at the University of Leipzig in 2008. There he researches the effect of the human sense of touch, develops therapies for psychic based disorders of body perception and as founder of haptic design worldwide, advises industrial producers on the design of new products. Martin Grunwald's book Human Haptic Perception (released in 2008) is considered a standard reference of International Haptic Research

Christian Hesse & Karsten Schwanke From Lucky Numbers To PIN Codes

- Mathematical everyday phenomena presented in a clear and entertaining manner

April 2020, 272 pages

Useful and interesting facts from the world of numbers

Use maths to solve the riddles of everyday life

Mathematics professor and best-selling author Christian Hesse and popular TV presenter Karsten Schwanke make maths fun: Can luck in the lottery be calculated? Why is 2-1 the most frequent result in football? What is the 101 of politics? Christian Hesse and Karsten Schwanke provide answers to these and many other questions, and present practical knowledge from the world of maths, e.g., tips and tricks for the four basic rules of arithmetic, a simple mnemonic to work out days of the week and a process to determine the number of fish in an aquarium. They recount fascinating facts about the meaning of numbers in the weather, in the plant kingdom and in medicine, and they garnish everything with mathematical puzzles and valuable knowledge about primary numbers, fractions and other important numbers. Knowledge-lite for everyone who loves number games or stories about numbers.

The author:

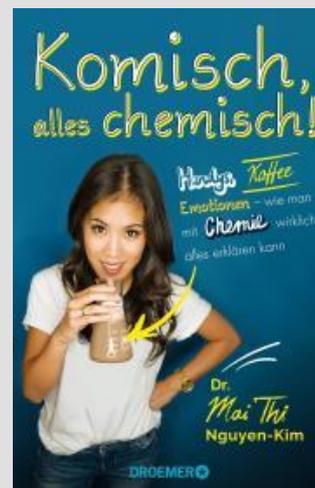

Christian Hesse, born in 1960, is a professor of mathematics in Stuttgart. He has become well-known as an author of popular non-fiction about maths. In 2018, he was a repeat guest on Karsten Schwanke's programme, "SMS - Schwanke meets Science".

Karsten Schwanke, born in 1969, is a meteorologist. He has presented the weather on ARD since 1995. He has also become well-known thanks to a knowledge magazine for children and adults. In 2010, he won the Goldene Kamera and was nominated for the Grimme Prize.

Dr. Mai Thi Nguyen-Kim

Funny How Everything is Chemistry!

- Our everyday chemistry explained: toothpaste, mobile phone batteries, being in love and coffee breaks
- Numerous illustrations by Claire Lenkova

March 2019, 256 pages

Life really starts with chemistry!

With chemistry throughout the day: the daily routine of young scientist and journalist Mai Thi Nguyen-Kim guides us through the whole world of organic, inorganic and physical chemistry. It starts with the chemistry of waking up and an explanation of the melatonin and cortisol levels. We discover the right time for the first coffee, why there should be fluoride in toothpaste and why the chaos that awaits us on the desk in the office is what the universe intends. We learn new things about the chemistry of gorilla glass and mobile phone batteries, and why aluminium salt is the only thing that prevents the formation of sweat while other substances just stop sweat from smelling. In the evening, Mai Thi reveals the secret of a perfect chocolate cake and of course, the book also covers the “chemistry of love”.

English sample translation available

The author:

Dr. Mai Thi Nguyen-Kim is a chemist and science journalist. During her PhD, which she gained from Harvard University, she started the YouTube channel, “The Secret Life Of Scientists” and in doing so started her mission to spread science like a “pest” throughout the country. She is now following this goal using all means: as the successor to Ranga Yogeshwar, she presents the WDR science show “Quarks”. For “funk”, the online offering of ARD and ZDF, she produces the YouTube channel “maiLab” which has won many awards including the 2018 Grimme Online Award. In the same year, she was the first YouTuber to receive the Georg-von-Holtzbrinck-Preis for her talent of sharing knowledge that corresponds to the contemporary zeitgeist.

Marcus Schwarz

When Insects Walk On Corpses

- When someone dies, nature has a banquet

April 2020, 288 pages

An entomologist investigates crime

When some children found a corpse while playing in the forest, everything pointed to murder. Establishing the precise time of death was crucial. The forensic entomologist Marcus Schwarz was called upon to clarify the question: how long had the body been there? With increasing regularity, the insect researcher has been able to solve spectacular cases. Was it suicide? What do the flies, who are always the first at the crime scene, tell him? Marcus Schwarz made his passion for forensics and criminology his job. This book gives an insight into the practices and the most interesting cases.

The author:

Marcus Schwarz, born in 1987, studied forestry in Dresden and works as a forensic entomologist at the Institute of Legal Medicine in Leipzig. In a multitude of cases - mainly homicides - he helps the police and public prosecutors around Germany. In addition, he trains police and students in his specialist fields.

Ernst Peter Fischer

The Big Book of People

- Comprehensive and illustrated

October 2014, 416 pages

A comprehensive illustrated volume on humans: biology, medicine, arts, culture, philosophy. Everything one needs to know and more. Much is astonishing, and all of it is informatively and beautifully illustrated. A feast for the eyes, and a trove of information.

What is a person? Why are people the way they are? How do they live? Why do they laugh, why do they kiss? Why can they tell good and bad apart – and then still choose the wrong paths so often?

In this lavishly illustrated, beautifully crafted book, bestselling author and science historian Ernst Peter Fischer attempts to depict, describe, and explain humanity in all its many facets: as biological, as cultural, and as social beings. The big book of people is an awe-inspiring, perceptive, and scientifically cutting-edge look at all that humans are, belong to, and have produced. Fischer summarises the insights biology, medicine, ethnology, cultural history, and philosophy have been able to glean into the species *Homo sapiens*.

The author:

Ernst Peter Fischer, born 1947, is a scientist and professor of science history at the University of Heidelberg. He has authored numerous popular and critically acclaimed non-fiction books, among them the *Spiegel* bestseller *Die andere Bildung*. For his work, he has been awarded numerous prizes, including the Göttingen Academy of the Sciences' Sartorius Prize.

ALL YOU WANNA KNOW — NATURE

- Interestingly presented facts about three groups of stinging insects
- Large format, 4/c, more than 100 fascinating illustrations, macro photography on high-gloss paper

July 2018, 400 pages

Fascinating nature: The masterpiece about the stinging hymenopterous insects

The summer book without the sting: Wasps annoy us and the media reliably reports on it

Bees, wasps and ants: We value them as pest controllers, as fruit tree pollinators and as the police of the forest. And at the same time, we are frightened of them and their painful stings. Their sting is the most important evolutionary trait of this insect group and forms the basis of the enormous diversity of species and their survival strategies. This book, which is beautifully illustrated with unique macro photographs, takes us on an entertaining excursion through the diversity of hymenopterous insects, the work of a wasp researcher and the key topics in evolution. Michael Ohl explains how and why the sting is deployed, what role pain plays in the evolution of these insects and how we, as people, can learn from the behaviour of these social hymenopterous insects.

The author:

Michael Ohl, born in 1964, is a curator for wasps, bees and ants at the *Museum für Naturkunde* in Berlin and assistant professor at the *Humboldt-Universität zu Berlin*. He performs research in evolution biology, systematics and biological classification, as well as research on the history of science.
