

Science

Science teaching and learning is split into 4 areas. These are:

- 1 Scientific enquiry
- 2 Life processes and living things (Biology)
- 3 Materials and their properties (Chemistry)
- 4 Physical processes (Physics)

These are broken down into units which are taught on a cyclical basis so children will regularly revisit topics and build on their learning.

Here at St Mary's we aim to make science fun, practical and relevant, to help children acquire the knowledge, skills and understanding required for good science learning. We aim to develop their creativity and curiosity about the world around us. Children work collaboratively as well as independently to investigate and develop ideas and questions about the world around us.
