

# Multiplication

- Making equal groups of objects - How many altogether?

- Repeated Addition - three groups of 2
- Lots of 2's 5s 10's
- Add another group

- Drawing objects in groups – There are 3 sweets in one bag, how many sweets are there in 5 bags?
- Match numerals to groups of objects

- Record numbers, possibly in a horizontal sentence along with drawings
- Use x sign to indicate groups of

- Draw arrays (arrangements of dots/marks)
- Write related horizontal calculations.

$$\begin{array}{ccc} * & * & * \\ * & * & * \end{array} \quad 3 \times 2 = 6$$

$$2 \times 3 = 6$$

- Complete missing number sums  $\_ \times 2 = 14$ ,  $7 \times \_ = 14$ ,  $14 = \_ \times 7$

- Regular times table practise begins – Y2  $\times 2, 5, 10$  - Y3  $\times 2, 3, 4, 5, 6, 10$  - Y4  $\times$  and  $- 10 \times 10$
- Doubling and multiples of 5 to 50
- Make the connection with the inverse and matching division facts

## Vocabulary

times  
groups of  
multiply  
product  
lots of  
multiplied by  
sets of  
multiple of  
once  
twice  
repeated-  
addition  
array  
row  
column

- Use a number line or hundred square to count on in groups of a number.
- Record the horizontal number sentence to go with it.
- Use a number line to jump forward in groups and record the horizontal number sentence to go with it.

(I count on in groups of 8/lots of 8)      (I count on in groups of 2/lots of 2)

- Write horizontal number sentences and use partitioning

$$\begin{aligned}
 8 \times 23 &= 8 \times 10 + 8 \times 10 + 8 \times 3 \\
 &= 80 + 80 + 24 \\
 &= 184
 \end{aligned}$$

- This develops into the grid method

X	10	10	3	
8	80	80	24	=184

leading to

X	20	3	
8	160	24	= 184

Make estimates for calculations

Regular number times table practice and recall (with associated facts)

The grid method can then be used for 2-digit by 2-digit multiplication.

$$66 \times 34 =$$

X	60	6	
30	1800	180	
4	240	24	
	= 2040	= 204	= 2244

Or

X	60	6	
30	1800	180	= 1980
4	240	24	= 264
			= 2244

This is extended to larger numbers

$$2035 \times 17$$

X	2000	30	5	
10	20000	300	50	
7	14000	210	35	
	= 34000	= 510	= 85	= 34595

Pencil and paper procedures

Extended form

$$\begin{array}{r}
 246 \\
 \times 7 \\
 \hline
 1400 \quad (200 \times 7) \\
 280 \quad (40 \times 7) \\
 \hline
 42 \quad (6 \times 7) \\
 1722
 \end{array}$$

Non-extended form

Leading to long multiplication

$$\begin{array}{r}
 352 \\
 \times 27 \\
 \hline
 2464 \\
 7040 \\
 \hline
 9504
 \end{array}$$

- Extend to decimals with up to two decimal places

$$\begin{array}{r}
 4.62 \\
 \times 1.3 \\
 \hline
 13.86
 \end{array}$$

Regular number times table practice and recall (with associated facts)

Make estimates for calculations

Please note:

- Use of any method is appropriate depending on the type and context of calculation.
- In problem solving situations practise choosing the most appropriate method for a variety of calculations.
- Apply methods learnt and use confidently in a range of situations
- Ongoing consolidation of times tables and related division facts
- Instant recall of 2, 5, 10, 3, 4, 6, 7, 8, 9 times tables (usually in that order)
