

How to choose a rating region for iPhone and iPad

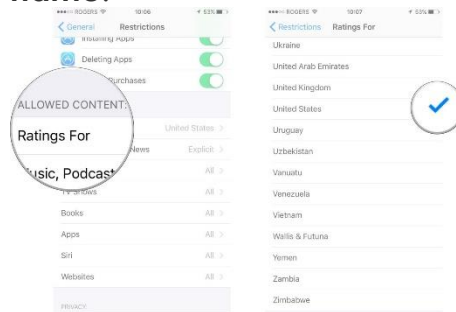

1. Launch the **Settings** app from your Home screen.
2. Tap on **General**.
3. Tap on **Restrictions**.

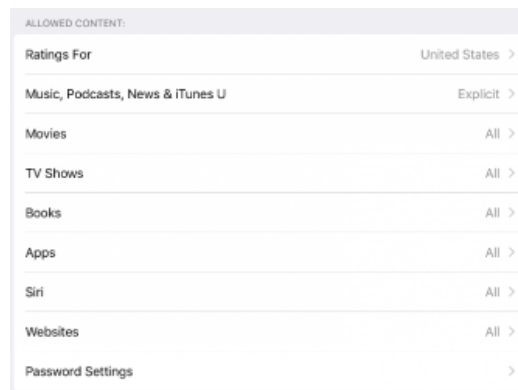

4. Tap on **Enable Restrictions** at the top if they aren't already enabled. If they are, you can skip to step 7.
5. Type a 4-digit password. (This can and should be completely different from the Lock screen passcode, otherwise the children will know it!)

6. Type your password again to confirm it.
7. Tap on **Ratings For** under the **Allowed Content** section.
8. Tap on your **country or region name**.

9. Set the rating for each of the sections.

10. Parental controls and restrictions will remember your selection and when content is filtered out, it will go by the ratings standards for your preferred region.

Be aware that not all of the content online or for app are rated so these filters aren't a perfect solution. Please carefully monitor your child's use of your device.
