

Be safe crossing the road

Staying Street Safe

Crossing between parked cars

- You should always try to choose a place to cross **without** parked cars. But, sometimes there might be parked cars right along a road, so you need to cross between them.
- **Be very careful.** First make sure there are no drivers in the cars you are going to walk between so the cars won't move. You should also check there are no drivers in the cars you will be crossing between on the other side of the road, as well.
- Carefully walk out between the parked cars and **stop** at the edge of the car.
- The edge of the car is like the kerb. Follow the **Green Cross Code**. Remember to stop, look, listen and think before crossing the road.

Remember drivers may not be able to see you when you're standing between parked cars.

Always be careful crossing the road when there are cars.
