

# Snap your way to success

---

## Before

Before you take a picture you need to think about your point of interest (POI).

So once you have chosen your POP (Person Object Place), make sure you adjust your position to get the best angle for the perfect picture.

Make sure you check your surroundings, lighting and always ask for permission.

## **During**

Try and get action shots to make your picture more interesting.

Take more than one picture so you can choose the best one later on.

Focus your device on a certain point of interest (POI).

If needs be, get more than one person to take the picture to ensure that your picture does not get blurry.

## After

Finally, edit or crop your photo or to take out any unnecessary distractions from your POI.

Once you have taken your shot, hold your position for up to three seconds so that your picture does not get blurry.
