

This week: It was great to have those of you that could join us this week, thank you for joining in our activities and supporting your children with their learning.

It has been science week and we have been investigating and experimenting all around the school. Mrs Akers brought in her vegetable tops that she was going to put on her compost. She asked us what we thought would happen to them, if we gave them some water. Amazingly some have started to shoot leaves and continue to grow!

We have also set up an Olympic Challenge with some cress seeds to see which will grow 'Stronger, faster, higher!'

We have been predicting, testing and recording results as we explored which objects can float or sink. We were surprised to find that some did both!

We have also made straw and hoop gliders, made and tested boats that hold 1 cube and still float and also taken part in the school 'Keepy Uppy Challenge' to see if we can make a marble run that makes the marble take a long time to get from the start to the finish.

Thank you to all those that made hats too! They looked amazing and very scientific! Our Hat Parade was a great success!

Katie Morag has also been helping us discover what is the same and what is different about where we live in Kimpton, England and island life in Scotland.

Remember:

Sat 1st July. If your child wants to join in at the folk festival, the song words and music are on our class page to practise.

The NSPCC visited us this week and helped us all learn how to speak out and stay safe. We learned how to tell a trusted adult if anything was upsetting us.

You may wish to share the PANTS song from the NSPCC

<https://www.nspcc.org.uk/preventing-abuse/keeping-children-safe/underwear-rule/>

It has a very clear message.

Home learning

this week:

What great home learning you are all doing. We have loved sharing all we have done with each other in class.

Year 1 HOME LEARNING summer 2

<p>Science - Plants</p> <p>We will be going on a plant hunt around the school. Can you see what flowers you can spot? How many trees can you name?</p>	<p>English - Presentations</p> <p>Over the coming weeks please prepare something to present to the rest of the class. Your presentation can be about anything that interests you: your favourite football team, your collection of dolls, cats, the solar system or your holiday. It's up to you!</p> <p>We will begin listening to the presentations during the week beginning 3rd July so there should be plenty of time to prepare for it. In the past, children have chosen all sorts of exciting topics covering an amazing range from politics and legends to ear-mufflers. It is an excellent opportunity for the children to demonstrate their speaking and listening skills.</p>
<p>Maths - Capacity</p> <p> litres (L) and millilitres (ml)</p> <p>This term, we have looked at capacity in maths. Design a recipe to create your own summer cocktail using the correct measurements.</p>	<p>Please see attached presentation letter for further details.</p>

Remember: Home learning can be as creative as you like. It may be photos, something you have made, drawn etc. Please do not feel that something needs to be...
