HEAD LICE

A case of head lice has been reported in school today. Prompt and thorough treatment is required immediately. Please take the following action:

1. If live head lice are found, use Lyclear Crème Rinse.
2. In 7 days' time, use Lyclear Crème Rinse again.
3. Use a lice detection comb on alternative days for the next 7 days.
4. If live head lice are found again, use Derbac M.
5. In 7 days' time, use Derbac M again.
6. Should you not wish to use chemicals, you may use the wet combing method.
7. Check the hair of all other members of your family.
8. Inform all those with whom the affected person comes into contact.

Both Lyclear Crème Rinse and Derbac M are available at pharmacies or on prescription from your Gp.

If anyone needing treatment is pregnant or has eczema or asthma, advice should be sought from your family doctor.

Prevention

1. Once a week use hair conditioner after shampooing.
2. Look for live head lice using a fine tooth comb.
3. Daily brushing and combing of the hair is a good way of keeping head lice away.
