

WEARING THE RIGHT HELMET THE RIGHT WAY

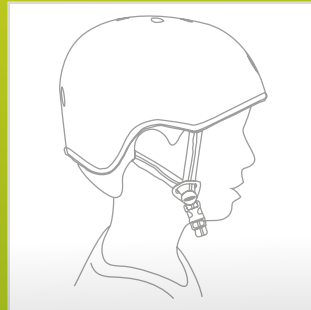

The proper helmet fit is an important factor for safety and comfort. Most serious head injuries to children can be prevented if they wear a helmet, but it's important for children to wear the right kind of helmet, and to wear it correctly. A snug, aligned fit will achieve a safe and secure ride. Below are simple steps in determining the proper helmet size.

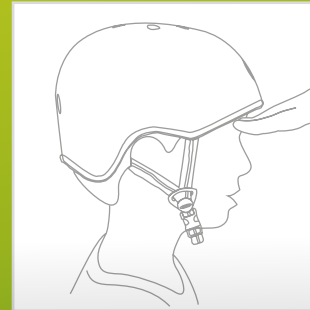

HEAD

Turn dial at back of the neck until the helmet fits 'snugly'

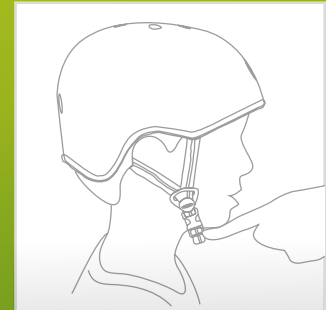

EARS

The straps should form a V just under the ears

EYES

Front edge of helmet should be 2 fingers width above the eyebrows. Adjust the dial at the back of the helmet so the fit is 'snug'

MOUTH

When mouth is closed you should be able to fit 1 finger between chin and strap
