

# Inspire Maths 5 Long-term Plan

Unit title	Key concepts
<b>1 Whole Numbers (1)</b>	
Numbers to 10 million	<ul style="list-style-type: none"> <li>The next place after the ten thousands place is the hundred thousands place</li> <li>10 ten thousands = 1 hundred thousand</li> </ul>
Place and value	<ul style="list-style-type: none"> <li>The actual value of a digit in a number is equal to the digit multiplied by the place value. E.g. the value of the digit 5 in the number 4 657 809 is 5 ten thousands, i.e. <math>5 \times 10\,000 = 50\,000</math></li> <li>The value of a number is the sum of the values of each digit in the number</li> </ul>
Comparing numbers within 10 million	<ul style="list-style-type: none"> <li>In a number, e.g. 1999, the value of the first digit (1000) is always greater than the sum of the values of the remaining digits (999)</li> </ul>
Rounding to the nearest thousand and estimating	<ul style="list-style-type: none"> <li>There are 10 hundreds between two consecutive thousands</li> </ul>
<b>2 Whole Numbers (2)</b>	
Using a calculator	<ul style="list-style-type: none"> <li>Understanding the concepts of place value and the four operations</li> </ul>
Multiplying by tens, hundreds or thousands	<p>In the base ten number system:</p> <ul style="list-style-type: none"> <li>Ones <math>\times 10</math> = tens, Tens <math>\times 10</math> = hundreds, Hundreds <math>\times 10</math> = thousands</li> <li>Ones <math>\times 100</math> = hundreds, Tens <math>\times 100</math> = thousands, Hundreds <math>\times 100</math> = ten thousands</li> <li>Ones <math>\times 1000</math> = thousands, Tens <math>\times 1000</math> = ten thousands, Hundreds <math>\times 1000</math> = hundred thousands</li> </ul>
Dividing by tens, hundreds or thousands	<p>In the base ten number system:</p> <ul style="list-style-type: none"> <li>Thousands <math>\div 10</math> = hundreds, Hundreds <math>\div 10</math> = tens, Tens <math>\div 10</math> = ones, Ones <math>\div 10</math> = tenths</li> <li>Ten thousands <math>\div 100</math> = hundreds, Thousands <math>\div 100</math> = tens, Hundreds <math>\div 100</math> = ones, Tens <math>\div 100</math> = tenths, Ones <math>\div 100</math> = hundredths</li> <li>Hundred thousands <math>\div 1000</math> = hundreds, Ten thousands <math>\div 1000</math> = tens, Thousands <math>\div 1000</math> = ones, Hundreds <math>\div 1000</math> = tenths, Tens <math>\div 1000</math> = hundredths, Ones <math>\div 1000</math> = thousandths</li> </ul>
Order of operations	<ul style="list-style-type: none"> <li>In number sentences with only addition and subtraction or only multiplication and division, the order of operations is from left to right</li> <li>In number sentences with multiplication and/or division together with addition and/or subtraction, the order of operations is from left to right with multiplication and/or division carried out first</li> <li>In number sentences with brackets, the order of operations is from left to right with the operations in the brackets carried out first</li> </ul>
Word problems (1)	<ul style="list-style-type: none"> <li>Application of concepts and skills of the four operations to solving word problems</li> </ul>
Word problems (2)	<ul style="list-style-type: none"> <li>Application of concepts and skills of the four operations and various strategies to solving word problems</li> </ul>
<b>Practice Book – Review 1</b>	
<b>Assessment Book – Test 1</b>	

<b>3 Fractions (1)</b>	
Like and unlike fractions	<ul style="list-style-type: none"> <li>• A fraction refers to a part of a whole</li> <li>• Like fractions are fractions with the same denominator</li> <li>• Unlike fractions are fractions with different denominators</li> </ul>
Adding unlike fractions	<ul style="list-style-type: none"> <li>• Fractions are equivalent when they show the same parts of the whole</li> <li>• Fractions can be added when they are expressed as like fractions</li> </ul>
Subtracting unlike fractions	<ul style="list-style-type: none"> <li>• Two fractions can be subtracted if they come from the same whole or from identical wholes</li> </ul>
Fractions and division	<ul style="list-style-type: none"> <li>• A whole number when divided by another whole number can result in: (a) a whole number with or without remainder (b) a proper fraction (c) a mixed number</li> </ul>
Converting fractions to decimals	<ul style="list-style-type: none"> <li>• Fractions and decimals are interchangeable</li> <li>• Decimals are a special type of fractions with denominators in tens, hundreds and thousands</li> </ul>
Adding mixed numbers	<ul style="list-style-type: none"> <li>• A mixed number comprises a whole number and a proper fraction</li> <li>• Mixed numbers can be added like adding proper and improper fractions</li> </ul>
Subtracting mixed numbers	<ul style="list-style-type: none"> <li>• A mixed number comprises a whole number and a proper fraction</li> <li>• Mixed numbers can be subtracted like subtracting proper and improper fractions</li> </ul>
Word problems	<ul style="list-style-type: none"> <li>• The following concepts are applied to fractions: part-whole concepts in addition and subtraction, comparison concept, adding-on in addition, taking-away in subtraction and division concept</li> </ul>
<b>4 Fractions (2)</b>	
Product of proper fractions	<ul style="list-style-type: none"> <li>• Multiplying two fractions is the same as finding the fractional part of another fraction</li> </ul>
Word problems (1)	<ul style="list-style-type: none"> <li>• The product of two proper fractions is the fractional part of another fraction</li> </ul>
Product of an improper fraction and a proper or improper fraction	<ul style="list-style-type: none"> <li>• Multiplying a fraction and another fraction is the same as finding the fractional part of another fraction</li> </ul>
Product of a mixed number and a whole number	<ul style="list-style-type: none"> <li>• The product of a whole and a mixed number refers to the group and item multiplication concept</li> </ul>
Word problems (2)	<ul style="list-style-type: none"> <li>• Use the group and item multiplication concept to find the product of a whole number and a mixed number</li> </ul>
Dividing a fraction by a whole number	<ul style="list-style-type: none"> <li>• Division in fractions is dividing each fractional part into smaller equal parts/units</li> </ul>
Word problems (3)	<ul style="list-style-type: none"> <li>• The concepts of the four operations and division of a fraction are applied</li> </ul>
<b>Practice Book – Review 2</b>	
<b>Assessment Book – Test 2, Challenging Problems 1, Check-up 1</b>	
<b>5 Area of a triangle</b>	
Base and height of a triangle	<ul style="list-style-type: none"> <li>• Any side of a triangle can be the base and for each base, there is a corresponding height</li> </ul>
Finding the area of a triangle	<ul style="list-style-type: none"> <li>• The area of a triangle is half that of its related rectangle</li> <li>• Area of a triangle = <math>\frac{1}{2} \times \text{Base} \times \text{Height}</math></li> </ul>

<b>6 Ratio</b>	
Finding ratio	<ul style="list-style-type: none"> <li>Ratio is a way of comparing the relative sizes of two quantities or sets of items</li> </ul>
Equivalent ratios	<ul style="list-style-type: none"> <li>Finding the common factor of the terms of the ratio of two quantities</li> <li>Dividing the terms of a ratio of two quantities by the common factor to express a ratio in its simplest form</li> </ul>
Word problems (1)	<ul style="list-style-type: none"> <li>Applying equivalent ratio concept, part-whole concept, taking away concept and comparison concept to solve up to 2-step word problems involving ratio of two quantities</li> </ul>
Comparing three quantities	<ul style="list-style-type: none"> <li>Ratio is a way of comparing the relative sizes of three quantities or sets of items</li> </ul>
Word problems (2)	<ul style="list-style-type: none"> <li>Applying equivalent ratio concept, part-whole concept and comparison concept to solve up to 2-step word problems involving ratio of three quantities</li> </ul>
<b>Practice Book – Review 3</b>	
<b>Practice Book – Revision 1</b>	
<b>Assessment Book – Test 3, Challenging Problems 2, Check-up 2</b>	
<b>7 Decimals</b>	
Converting decimals to fractions	<ul style="list-style-type: none"> <li>Decimals are an extension of fractions</li> <li>Decimals can be converted to fractions, and vice versa</li> </ul>
Multiplying by tens, hundreds and thousands	<ul style="list-style-type: none"> <li>When a number is multiplied by 10, 100 or 1000, each digit in the number moves 1, 2 or 3 places respectively to the left in the place value chart</li> <li>When a number is multiplied by 10, 100 or 1000, the decimal place shifts 1, 2 or 3 places respectively to the right</li> </ul>
Dividing by tens, hundreds and thousands	<ul style="list-style-type: none"> <li>When a number is divided by 10, 100 or 1000, each digit in the number moves 1, 2 or 3 places respectively to the right in the place value chart</li> <li>When a number is divided by 10, 100 or 1000, the decimal place shifts 1, 2 or 3 places respectively to the left</li> <li>Dividing by 10 is the same as multiplying by <math>\frac{1}{10}</math></li> </ul>
Using a calculator	<ul style="list-style-type: none"> <li>Understanding the concepts of place value and the four arithmetical operations</li> </ul>
Word problems	<ul style="list-style-type: none"> <li>Application of concepts and skills of the four operations to solving word problems</li> </ul>
<b>8 Measurements</b>	
Converting a measurement from a larger unit to a smaller unit	<ul style="list-style-type: none"> <li>Understanding direct proportion</li> </ul>
Converting a measurement from a smaller unit to a larger unit	<ul style="list-style-type: none"> <li>Understanding direct proportion</li> </ul>
<b>Practice Book – Review 4</b>	
<b>Assessment Book – Test 4</b>	
<b>9 Mean (average)</b>	
Understanding mean (average)	<ul style="list-style-type: none"> <li>The total amount or sum of the data is found by multiplication: Total = Mean x Number of data or items</li> </ul>
Word problems	<ul style="list-style-type: none"> <li>Applying the mean concept and part-whole concept to solve problems involving more than one set of items</li> </ul>

<b>10 Percentage</b>	
Per cent	<ul style="list-style-type: none"> <li>• 5% means 5 out of 100</li> <li>• Percentage is a specific fraction where the denominator is 100</li> </ul>
Converting more fractions to percentages	<ul style="list-style-type: none"> <li>• Fractions and percentages are two representations for comparison of numbers</li> <li>• Percentage is a specific fraction where the denominator is 100</li> </ul>
Percentage of a quantity	<ul style="list-style-type: none"> <li>• Percentage of a quantity refers to part of a whole where the whole is equivalent to 100 units</li> </ul>
Word problems	<ul style="list-style-type: none"> <li>• 100 parts = the whole = 100%</li> </ul>
<b>Practice Book – Review 5</b>	
<b>Assessment Book – Test 5, Challenging Problems 3, Check-up 3</b>	
<b>11 Angles</b>	
Angles on a straight line	<ul style="list-style-type: none"> <li>• An angle (<math>\leq 180^\circ</math>) is made when two straight lines meet at a point</li> <li>• A unit of measurement of angles is the degree</li> <li>• The sum of angles on a straight line is <math>180^\circ</math></li> </ul>
Angles at a point	<ul style="list-style-type: none"> <li>• The sum of angles at a point is <math>360^\circ</math></li> </ul>
Vertically opposite angles	<ul style="list-style-type: none"> <li>• Vertically opposite angles are made by two intersecting straight lines</li> <li>• Vertically opposite angles are equal</li> </ul>
<b>12 Properties of Triangles and 4-sided Shapes</b>	
Angles of a triangle	<ul style="list-style-type: none"> <li>• Sum of angles in a triangle = <math>180^\circ</math></li> </ul>
Right-angled, isosceles and equilateral triangles (Right-angled triangles)	<ul style="list-style-type: none"> <li>• A right-angled triangle has one angle equal to <math>90^\circ</math></li> </ul>
Right-angled, isosceles and equilateral triangles (Isosceles triangles)	<ul style="list-style-type: none"> <li>• An isosceles triangle has two equal sides</li> </ul>
Right-angled, isosceles and equilateral triangles (Equilateral triangles)	<ul style="list-style-type: none"> <li>• An equilateral triangle has three equal sides</li> </ul>
Parallelograms, rhombuses and trapeziums (Parallelograms)	<p>A parallelogram is a 4-sided shape in which:</p> <ul style="list-style-type: none"> <li>• the opposite sides are parallel</li> <li>• the opposite angles are equal</li> <li>• each pair of angles between parallel sides adds up to <math>180^\circ</math></li> </ul>
Parallelograms, rhombuses and trapeziums (Rhombuses)	<ul style="list-style-type: none"> <li>• A rhombus is a parallelogram with four equal sides where the opposite angles are equal and each pair of angles between parallel sides adds up to <math>180^\circ</math></li> </ul>
Parallelograms, rhombuses and trapeziums (Trapeziums)	<ul style="list-style-type: none"> <li>• A trapezium is a 4-sided shape in which only one pair of opposite sides is parallel and each pair of angles between parallel sides adds up to <math>180^\circ</math></li> </ul>
<b>Practice Book – Review 6</b>	
<b>Assessment Book – Test 6</b>	

<b>13 Geometrical Construction</b>	
Drawing triangles	<ul style="list-style-type: none"> <li>Given two angles and the side adjacent to the given angles or two sides and the included angle, only one triangle can be drawn</li> </ul>
Drawing 4-sided shapes	<ul style="list-style-type: none"> <li>Given the side of a square, only one square can be drawn</li> <li>Given the length and width of a rectangle, only one rectangle can be drawn</li> <li>Given one side and one angle of a rhombus, only one rhombus can be drawn</li> <li>Given two adjacent sides and one angle of a parallelogram, only one parallelogram can be drawn</li> <li>Given two adjacent sides, the included angle and the angle adjacent to the included angle of a trapezium with the parallel sides indicated, only one trapezium can be drawn</li> </ul>
<b>14 Volume of Cubes and Cuboids</b>	
Building solids using unit cubes	<ul style="list-style-type: none"> <li>A cube is a solid which has 6 square faces</li> <li>A unit cube means a single cube</li> </ul>
Drawing cubes and cuboids	<ul style="list-style-type: none"> <li>Isometric dotted paper can be used to draw cubes and cuboids</li> </ul>
Understanding and measuring volume	<ul style="list-style-type: none"> <li>Volume is the amount of space an object occupies</li> <li>Volume is measured in cubic units</li> <li>Volume can be measured in different units, including <math>\text{cm}^3</math> and <math>\text{m}^3</math></li> </ul>
Volume of a cuboid and of liquid	<ul style="list-style-type: none"> <li>Volume of a cube = Edge x Edge x Edge</li> <li>Volume of a cuboid = Length x Width x Height</li> <li>Volume of liquid in a container that is completely filled is equal to the capacity of the container</li> </ul>
<b>Practice Book – Review 7</b>	
<b>Practice Book – Revision 2</b>	
<b>Assessment Book – Test 7, Challenging Problems 4, Check-up 4</b>
