# Year 6 Homework 07.01.19.

Happy New Year to you all! We hope that you had a great break and are ready and eager to get back to work - just like us!

#### Grammar:

Hopefully, you all know the basics of grammar with regards to word classes. If not, please make sure that you know the purpose of the following and how to identify them:

- > Noun
- > Verb
- > Adverb
- Adjective

**Task**: Your task is to do some research and find out about **nouns**. There are quite a few different types of noun and they do different jobs. Make a list of these different types of noun and give at least 2 examples of these nouns being used in a <u>full</u> sentence.

## For example:

Proper Nouns - A proper noun is a noun that is used for a specific person, place or thing.

1. Mr White works at St Andrew's Primary School in Hove and he is wonderful.

### Maths - Percentages.

This week we are learning about percentages and how to find percentages of amounts.

Remember that percentages, fractions and decimals are closely linked.

To find:

100% - the whole thing!

50% - simply half the amount.

25% - half and half again.

75% - add together 50% and 25%.

10% - divide the number by 10 (move number one place to the right)

5% - find 10% and half it!

1% - divide the number by 100 (move number two places to the right)

36% - find 25%, then 10% then 1%.

| Easy percentages |                                 |                              |
|------------------|---------------------------------|------------------------------|
| Percentage       | Fraction                        | How to find it               |
| 50%              | $\frac{50}{100} = \frac{1}{2}$  | Divide by 2                  |
| 25%              | $\frac{25}{100} = \frac{1}{4}$  | Divide by 4                  |
| 75%              | $\frac{75}{100} = \frac{3}{4}$  | Find 25%, then multiply by 3 |
| 10%              | $\frac{10}{100} = \frac{1}{10}$ | Divide by 10                 |
| 20%              | $\frac{20}{100} = \frac{1}{5}$  | Divide by 5, or double 10%   |
| 5%               | $\frac{5}{100} = \frac{1}{20}$  | Divide by 20, or half 10%    |
| 1%               | 1/100                           | Divide by 100                |

**Task:** Complete the sheet on "Finding Percentages" - do as much of the sheet as you can using the above information to help you.

Make a poster that explains how to find percentages of amounts. Use the information that you have been given, add any more info that you would like to add and make a colourful, attractive and, most importantly, informative poster that will help you and everyone else to know how to calculate % accurately.

## Reading:

As you will now know, your classroom has a lovely, new

Reading Corner. You also have a huge variety of both fiction
and non-fiction books available to you. Reading is one of the most crucial
things you can do - not just in school, but for the rest of your life!

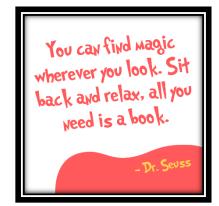

Task: Choose one book from your class library that you would like to take home and read.

You will have about a week to read this book and create a piece of work based on what

you have read. Therefore, you need to be realistic in your choice!

Once you have read this book you need to create a piece of work based upon it.

This may be a newly designed book cover, a written book review, a list of things that you have learnt or been interested in from you reading. You can decide what you would like to do - so you can be creative and do something that you will really enjoy.

#### History:

We are sorry that we ran out of time last term to get our history timeline organised. We still plan to do it within the next few weeks so make sure that you have your labels sorted out and your artefact at the ready! More information will follow shortly.

Good Luck and do your best!

Mr White, Miss McCarter and Mr Griffiths.
