

Field work

Where I live in relationship to Great Gransden

- I live 0.75 miles away from school and there are no street lights or footpaths. It is really hard to get to school safely.

The road

As you can see in this picture there are no footpaths or street lights so it is unsafe to walk.

Original house

- This is what the original house looked like before it got knocked down.

Progress

- This picture is when the house has been built, but the garden is still in progress.

How the house is now.

This is the new house and garage today.

Different types of soil.

- The ground is made up of different types of soil including ,a layer of top soil which is good for certain plants and drainage .
- Underneath the top soil is clay, which is a sticky and heavy soil ,it is very poor for drainage but is good for holding water. Certain types of plants prefer clay soil.

Clay soil and top soil

Trees

- We have 3 mature apple trees that we had to keep when we demolished the bungalow.
- We have planted:
 - Plum trees x 3
 - Pear trees x 3
 - Apple tree x 1
 - Himalayan Birch
 - Holly Tree x 3
 - Sweet Gum Tree
 - Holly Hedge – encourages wild animals

Allotment area

- In the allotment area we grow,

tomatoes

Green beans

Strawberries, raspberries, white currants.

Sweet corn

Chillies

Cucumber and marrow
