1. Central African Republic (CAR) Strategy Presentation

- The Global Logistics Support Team and the Coordination Cell in Bangui have been presenting the Logistics Cluster’s achievements for the year 2021 in CAR, the remaining challenges and constraints identified through the Gaps and Needs Analysis (GNA) exercise and the resulting strategy for 2022.
- The strategy official document is accessible using the following link: https://logcluster.org/document/car-strategie-du-cluster-logistique-2022

2. Questions and Answers

Budget
- The Logistics Cluster in CAR is experiencing a funding gap. The contingency plan consist in an agreement with OCHA Common Humanitarian Fund (CHF) on a Non-Cost Extension (NCE) until the end of March 2022. A new allocation is expected in April 2022. This will imply the reduction in the number of flights facilitated by the Logistics Cluster until the new allocation.

Training
- The Logistics Cluster will approach the Insitut Superieur de Management (ISM) in Bangui and probe their direction for interest on possible collaborations in Humanitarian Logistics Trainings.

Rehabilitation
- A Rehabilitation Working group will be reactivated by the coordination cell in January 2022.
Data collection and dissemination

- Data collection is mainly processed on a bilateral basis. The collection of operational information through standard tools (i.e., online questionnaires) is challenging. Initiatives are being taken in order to build incentives for data sharing efforts and to develop new tools facilitating information collection, processing, analysis and dissemination.

- Technical working groups are key places of information sharing for humanitarian actors on specific logistics-related topics.

One hundred percent of the meeting participants have raised their interest in seeing this format of Global Call replicated for any Logistics Cluster operation strategy review after Country Office clearance.
