Ebola is a dangerous disease that can cause death.

How is Ebola spread? Through direct contact with the following:

- Soiled clothing of an infected person
- Unsterilized equipment used by an infected person
- Blood and secretions from wounds from an infected person
- Urine from an infected person
- Saliva from an infected person
- Vomit from an infected person
- Sweat from an infected person
- Faeces from an infected person
- Handling wildlife whether alive or dead

If you suspect anyone or yourself to have been infected, be responsible! Avoid direct contact with those not infected. Report all suspected cases to the nearest health facility. For any queries, Call Toll-Free line: 6666
