The information displayed is sourced from the Ukrainian Authorities, which has been summarised and aggregate in order to compile key guidance and information regarding generators, in light of the winterization and energy-provision support efforts undertaken by the humanitarian community.

**GENERATOR IMPORTATION**

As of November 2022, equipment which supports energy provision is **exempted** from importation tax and VAT, and **Customs procedures were simplified** resulting in:

- no declaration of compliance needed
- no marking with a sign of compliance with technical regulations needed
- no written declaration if total weight is less than 50 kg or/and total value of 500 euros.

**GENERATOR USAGE**

The State Emergency Service of Ukraine has issued [recommendations](#) on generators usage.

Requirements for the installation can be found in the [Generators Fire Safety Rules and Regulations](#) (issued by the Ukraine Ministry of Energy and Coal Industry).

The usage of generators required to be [declared](#) to the authorities (since March 2022, the requirement for a permit has been waived).

The usage of a generator requires [Environmental tax](#) for atmospheric emissions to be paid (will potentially change in light of 13 Dec 2022 approval of changes in law).

When storing more than 5 litres of fuel on site, the issuance of a [license](#) is required.

The information contained herewith was compiled from official sources, as of 14 December 2022. The Logistics Cluster encourages partners to always check the most recent regulations available (if any) before proceeding with the importation or usage of generators.
