1. **Access Constraints**
   - New access constraints have not been reported. All the national highways and major roads are clear for traffic.
   - Partners were reminded that all updates and information related to access are available via a dedicated page on the Logistics Cluster website.

2. **Government assistance request & logistics support**
   - **Status:** WFP completed the flood-related support to NDMA. WFP has assisted with receipt, customs clearance, storage, and transport to the designated location for the relief items arrived at seaports, airports, and by roads. Currently, the payment is being processed.

3. **Coordination and information sharing**
   - **Warehousing training**
     In December 2022, WFP organized warehousing training in Sukkur, Sindh, for those who engage in stock management and commodity distribution. In total, 46 people participated, including UN volunteers, the Logistical focal point of the cooperating partners, and the members of the Logistics Working Group. The objective was to enhance the logistics capacity of our stakeholders, especially in inventory management, commodity handling, and facility maintenance, to ensure quality food is delivered to the beneficiaries.
• **Information sharing:**
  - An organization reported difficulty with customs clearance. A few items were stuck in customs due to the new system blocking them from doing the paperwork.
  - Some organizations reported that local suppliers could not import the materials from overseas. In some cases, a local supplier refuses to take the orders due to difficulties with imports. This situation will likely become normal in one month’s time.
  - WFP is establishing additional warehouses in Malakand (KP), D.I. Khan (KP), Surab (Balochistan), Rawalpindi (Punjab), and Lahore (Punjab) for Pakistan operations. The participants were encouraged to contact WFP in case any agency is interested in having a Service Level Agreement (SLA) with WFP.
  - The WFP’s temperature-controlled facilities are available in Karachi (Sindh) and Peshawar (KP). In Quetta, the air conditioner is used to make the temperature cool around 25 degrees Celsius in the warehouse.
  - It was discussed the possibility of having the person from NDMA in this meeting. It is encouraged to invite an NDMA staff so that anyone in this working group can benefit from the government’s perspective information.
  - WFP deals with eight SLAs in Quetta warehousing facilities with different partners, including government departments, NGOs, and UN agencies.

4. **Way Forward**
   - The participants agreed to keep this forum alive so the members can exchange valuable information such as customs regulations, border closure with Afghanistan, and vendor management.

5. **AOB**
   - The Logistics Working Group meetings will continue to be held on a monthly basis.
   - **Next meeting:** 27 February 2023 at 14:30
