1. New features

The following new features have been released. Please note that many functions are activated for a specific operational context and might only be visible for some operations.

New legend: dynamic and multilingual

The legend has been fully redesigned for better readability and understanding. The following new features were included:

1. All information is available in the selected language.
2. Symbols and their colours indicating the situational status are now grouped for ease of reading.
3. Only the symbols currently visible on the screen are shown to help find the correct ones.

Dynamic symbology

Symbols, colours, transparency, and more can now be changed dynamically to improve loading speed and the readability of information, adapted to user-specific information needs.

Latest updates widget: See what has happened lately

With this new widget, you can see a list of the latest updates. When clicking on an item, LogIE zooms to the respective entry.

Improved report widget

The new widget makes reporting on LogIE faster and easier by using visuals and a wizard function.

2. Improvements and addressed issues

- **Page access** management has been improved in the first phase by piloting the Single-Sign-On (SSO) functionality with WFP accounts.
- **Automatic filtering of features** when changing the module, for example, showing only international airports.
- **The sharing function** has been improved. If you share a point, the link will open LogIE at the same location with the shared point of interest opened.
- **Coordinate extraction** has been improved. With right-click on any place on the map, the coordinates are shown (lat-lon format) and can be copied to the clipboard by clicking on them.
- **Searching for coordinates** has been improved, lat-lon coordinates can now be entered directly in the search field.
- **Loading performance** has been further improved.
- **Multilanguage functionality** has been improved for menu elements.
- **Basemaps** have been improved by adding more standard background maps with the official UN boundaries.

3. Known issues and limitations

The following issues have been identified and are part of the current development roadmap to be addressed in the upcoming releases.

- Map export limited to public layers. An improved mapping version is under development.
- Comment fields are shown in all languages available. If information is entered in multiple languages, you see both languages in parallel. Full multilingual handling of layer content is under development.

We are always happy to improve! Please send us an email to global.logie@wfp.org in case you want to share any ideas, suggestions, or identified issues. Thank you!
