

The new features, improvements, and issues addressed in this document have been recently released. Please note that many functions are activated for a specific operational context and might only be visible for some operations.

## 1. New Features

### Concept of Operations Integration

The Concept of Operations (ConOps) module in LogIE now integrates data from the Logistics Cluster website via the Logistics Cluster API. In addition to displaying the ConOps map for the emergency, now the module includes:

- The Concept of Operations information as published on the Logistics Cluster website.
- A direct link to the Logistics Cluster webpage for the specific emergency.
- A direct link to the online service request forms related to that emergency.

## 2. Improvements and Addressed Issues

- A new toggle has been added at the top of the map, allowing editors to quickly filter visible information without needing to open the filter widget in the navigation panel on the left side of the screen.
- Editors can now view deleted elements easier using a dedicated toggle located in the filter widget. This toggle appears as the last filter in the filter list.

---

### 3. Known issues and limitations

---

There are no major issues or limitations to report.

We always welcome opportunities to improve LogIE. Feel free to share your ideas and suggestions or report any issues by emailing us at [global.logie@wfp.org](mailto:global.logie@wfp.org). Thank you for your collaboration
