

## Background

South Sudan faces a prolonged humanitarian crisis worsened by multiple shocks. Conflict in Sudan has caused cross-border displacement, while seasonal floods cut off vulnerable communities. A cholera outbreak spreading across key states has strained fragile health and WASH systems. These emergencies are compounded by hyperinflation, intercommunal violence, and rising food insecurity, overwhelming aid efforts.

Amid these challenges, the WFP-led Logistics Cluster is vital to sustaining humanitarian aid. It coordinates logistics, shares information, maps access routes, and manages supply chains to improve delivery. As the Provider of Last Resort, the Cluster fills critical gaps by offering shared services like transport, warehousing, and cargo consolidation ensuring aid reaches even the hardest-to-access areas.

## Operational Highlights

- From April to June 2025, the Logistics Cluster facilitated the transport of 864 mt of life-saving multi-sectoral humanitarian cargo utilizing common logistics services and road convoys. The cluster reached 22 hard-to-reach locations and supported 61 organizations.
- Of the above, 117 mt representing 14% of multisectoral relief items were airlifted to various locations to support cholera response efforts.
- Additionally, 90 mt representing 10% of cargo was delivered to various locations via river transport, using WFP's On Demand Services (ODS) at 50% cost-share modalities.
- Seven road convoys, carrying an estimated 658 mt of humanitarian cargo, were coordinated to locations along the Northern Jonglei, the Greater Pibor Administrative Area (GPAA), and Upper Nile State.
