

## Data Type Attacks

<b>Paths/Files</b>	Long Name (>255 chars) Special Characters in Name (space * ? / \   < > , . ( ) [ ] { } ; : ' " ! @ # \$ % ^ & ) Non-Existent Already Exists No Space Minimal Space WriteProtected Unavailable Locked On Remote Machine Corrupted
<b>Time and Date</b>	Timeouts Time Difference between Machines Crossing Time Zones Leap Days Always Invalid Days (Feb 30, Sept 31) Feb 29 in Non-Leap Years Different Formats (June 5, 2001; 06/05/2001; 06/05/01; 06-05-01; 6/5/2001 12:34) Internationalisation dd.mm.yyyy, mm/dd/yyyy am/pm, 24 hours Daylight Savings Changeover Reset Clock Backward or Forward
<b>Numbers</b>	0 32768 (215) 32769 (215 + 1) 65536 (216) 65537 (216 + 1) 2147483648 (231) 2147483649 (231 + 1) 4294967296 (232) 4294967297 (232 + 1) Scientific Notation (1E-16) Negative Floating Point/Decimal (0.0001) With Commas (1,234,567) European Style (1.234.567,89) All the Above in Calculations

## Data Type Attacks

<b>Strings</b>	<p>Long (255, 256, 257, 1000, 1024, 2000, 2048 or more characters)</p> <p>Accented Chars (àáâãäåçèéêëìíîïðñòóôö, etc.)</p> <p>Asian Chars ( )</p> <p>Common Delimiters and Special Characters ( " ' `   / \ , ; : &amp; &lt; &gt; ^ * ? Tab )</p> <p>Leave Blank</p> <p>Single Space</p> <p>Multiple Spaces</p> <p>Leading Spaces</p> <p>End-of-Line Characters (^M)</p> <p>SQL Injection ( 'select * from customer )</p> <p>With All Actions (Entering, Searching, Updating, etc.)</p> <p>Emojis</p>
<b>General</b>	<p>Violates Domain-Specific Rules (an ip address of 999.999.999.999, an email address with no "@", an age of -1).</p> <p>Violates Uniqueness Constraint</p>

## Web Tests

<b>Navigation</b>	<p>Back (watch for 'Expired' messages and double-posted transactions)</p> <p>Refresh</p> <p>Bookmark the URL</p> <p>Select Bookmark when Logged Out</p> <p>Hack the URL (change/remove parameters; see also Data Type Attacks)</p> <p>Multiple Browser Instances Open</p> <p>Swipe/Tap/Pinch</p>
<b>Input</b>	<p>See also Data Type Attacks</p> <p>HTML/JavaScript Injection (allowing the user to enter arbitrary HTML tags and JavaScript commands can lead to security vulnerabilities).</p> <p>Check Max Length Defined on Text Inputs</p> <p>&gt; 5000 Chars in TextAreas</p>
<b>Syntax</b>	<p>➤ <a href="#">HTML Syntax Checker</a></p> <p>➤ <a href="#">CSS Syntax Checker</a></p>

## Web Tests

<b>Preferences</b>	Javascript Off Cookies Off Security High Resize Browser Window Change Font Size
<b>Accessibility / A11y</b>	Keyboard: Navigation; Skip to link (first tab); No traps (menus / subsections); visible focus indicator; use all functionality; pop ups have focus, can be dismissed. Context: Links (descriptive) ; Alt-text (descriptive or decorative is hidden); Form input labels; Main elements (only one) Country and language defined; plain language used. Content: Capitals in #; No all capitals text; No justified text; Zoom to 200%; Gender neutral; acronyms explained; clear instructions; Good contrast; More than just colour to indicate success e.g. green tick.

## API Tests

↗ <b><u>BINMEN</u></b> (Gwen Diagram & Ash Winter)	Boundary, Invalid Entries, NULL, Method, Empty, Negative
↗ <b><u>POISED</u></b> (Amber Race)	Parameters, Output, Interop, Security, Errors, Data
↗ <b><u>VADER</u></b> (Stuart Ashman)	Verbs, Authorisation/Authentication, Data, Errors, Responsiveness

## Mobile/Device/Tablet

↗ <b><u>Mobile App Testing</u></b> (Daniel Knott)	Mobile Device, Orientation, Mobile Browsers, Interrupts, Look, Energy Consumption, Automation, Performance, Personas, Time & Date, Ergonomics, Security, Tracking, Inputs, Network, Platform Guidelines.
--	--

# Testing Wisdom

- A test is an experiment designed to reveal information or answer a specific question about the software or system
- Stakeholders have questions; testers have answers
- Don't confuse speed with progress
- Take a contrary approach
- Observation is exploratory
- The narrower the view, the wider the ignorance
- Big bugs are often found by coincidence
- Bugs cluster
- Vary sequences, configurations, and data to increase the probability that, if there is a problem, testing will find it
- It's all about the variables
- I am not all humans, not everyone does things as I do

## Heuristics

<b>Variable Analysis</b>	Identify anything whose value can change. Variables can be obvious, subtle, or hidden
<b>TouchPoints</b>	Identify any public or private interface that provides visibility or control. Provides places to provoke, monitor, and verify the system
<b>Boundaries</b>	Approaching the Boundary (almost too big, almost too small), At the Boundary
<b>Goldilocks</b>	Too Big, Too Small, Just Right
<b>CRUD</b>	Create, Read, Update, Delete
<b>Follow the Data</b>	Perform a sequence of actions involving data, verifying the data integrity at each step. (Example: Enter → Search → Report → Export → Import → Update → View)
<b>Configurations</b>	Varying the variables related to configuration (Screen Resolution; Network Speed, Latency, Signal Strength; Memory; Disk Availability; Count heuristic applied to any peripheral such as 0, 1, Many Monitors, Mice, or Printers).
<b>Interruptions</b>	Log Off, Shut Down, Reboot, Kill Process, Disconnect, Hibernate, Timeout, Cancel
<b>Starvation</b>	CPU, Memory, Network, or Disk at maximum capacity

## Heuristics

<b>Position</b>	Beginning, Middle, End (Edit at the beginning of the line, middle of the line, end of the line)
<b>Selection</b>	Some, None, All (Some permissions, No permissions, All permissions)
<b>Count</b>	0, 1, Many (0 transactions, 1 transactions, Many simultaneous transactions)
<b>Multi-User</b>	Simultaneous create, update, delete from two accounts or same account logged in twice
<b>Flood</b>	Multiple simultaneous transactions or requests flooding the queue e.g. making/selecting a submit request/button multiple times
<b>Dependencies</b>	Identify "has a" relationships (a Customer has an Invoice; an Invoice has multiple Line Items). Apply CRUD, Count, Position, and/or Selection heuristics (Customer has 0, 1, many Invoices; Invoice has 0, 1, many Line Items; Delete last Line Item then Read; Update first Line Item; Some, None, All Line Items are taxable; Delete Customer with 0, 1, Many Invoices).
<b>Constraints</b>	Violate constraints (leave required fields blank, enter invalid combinations in dependent fields, enter duplicate IDs or names). Apply with the Input Method heuristic.
<b>Input Method</b>	Typing, Copy/Paste, Import, Drag/Drop, Various Interfaces (GUI v. API)
<b>Sequences</b>	Vary Order of Operations → Undo/Redo → Reverse → Combine → Invert → Simultaneous
<b>Sorting</b>	Alpha v. Numeric → Across Multiple Pages
<b>State Analysis</b>	Identify states and events/transitions, then represent them in a picture or table. Works with the Sequences and Interruption heuristics
<b>Map Making</b>	Identify a "base" or "home" state. Pick a direction and take one step. Return to base. Repeat
<b>Users &amp; Scenarios</b>	Use Cases, Soap Operas, Personae, Extreme Personalities

# Heuristics

<p>↗ <b><u>RRCRCRC</u></b> (Karen N. Johnson)</p>	<p>Recent - what testing around new areas of code should I think about? Core - what essential functions or features must continue to work? Risky - what features or areas of code are inherently more risky? Configuration Sensitive - what code is dependent on environment settings? Repaired - what code has changed to address defects and potentially created issues? Chronic - what code typically breaks features that need to be tested?</p>
<p>↗ <b><u>FAILURE</u></b> (Ben Simo)</p>	<p>Functional, Appropriate, Impact, Log, UI, Recovery, Emotions</p>
<p>↗ <b><u>WWWVWHKE</u></b> (sounds like "wiki" (Darren McMillan)</p>	<p>Who is this for? What is this for? When &amp; by whom is it to be done? Where is it being done? Why is it being done? How is it being achieved? What questions does my Knowledge &amp; Experience produce?</p>
<p>↗ <b><u>Diversity &amp; Inclusion</u></b> (Callum Akehurst-Ryan)</p> <p>↗ <b><u>Combat Bias with Heuristics of Diversity</u></b> (Ash Coleman)</p>	<p>Does this work for me? Does this work for them? Does this work for someone I have never considered or ever met?</p>
<p>↗ <b><u>Seven Dwarfs</u></b> (Cassandra H. Leung)</p>	<p>Grumpy, Happy, Sleepy, Bashful, Sneezzy, Dopey, and Doc</p>
<p>↗ <b><u>Specs/Designs Watchlist</u></b> (Gerard McCann)</p>	<p>Ambiguity, weasel words (like could, should or may), Fudge (e.g. statements like 'this will be resolved at a later date', but no specifics around who and when), Confusing terminology, jargon or obscure acronyms, Oversimplification, Overcomplication.</p>
<p>↗ <b><u>TORCH</u></b> (Simon Tomes)</p>	<p>Timer, Oracles, Risks, Consider these questions, Heuristics.</p>
<p>↗ <b><u>MCOASTER</u></b> (Michael Kelly)</p>	<p>Mission, Coverage, Obstacles, Audience, Status, Techniques. Environment, Risk</p>

## Heuristics

<b>Seen and Heard</b> (Ady Stokes)	For everything you can see, is it announced by a screen reader? For everything you hear, can it be read (transcript, subtitles, captions, audio descriptions)
↗ <b>TuTTu and TaTTa</b> (Mark Winteringham)	Testing the UI or Testing Through the UI Testing the API or Testing Through the API
↗ <b>SACRED</b> (Richard Bradshaw)	State Management, Actions, Codified Oracle, Reporting, Execution, Deterministic
↗ <b>TRIMS</b> (Richard Bradshaw)	Targeted, Reliable, Informative, Maintainable, Speedy

## Frameworks

<b>Judgement</b> (James Lyndsay)	Inconsistencies, Absences, and Extras with respect to Internal, External – Specific, or External – Cultural reference points
<b>Observations</b> (James Lyndsay)	Input/Output/Linkage
<b>Flow</b>	Input/Processing/Output
<b>Requirements</b> (Gause & Weinberg)	Users/Functions/Attributes/Constraints
<b>Nouns &amp; Verbs</b>	The objects or data in the system and the ways in which the system manipulates it. Also, Adjectives (attributes) such as Visible, Identical, Verbose and Adverbs (action descriptors) such as Quickly, Slowly, Repeatedly, Precisely, Randomly. Good for creating random scenarios
<b>Deming's Cycle</b>	Plan, Do, Check, Act
