

Environmental Sustainability Mission Statement

Our Commitment – to deliver sustainability for a better future

We are committed to acting responsibly and sustainably across all activities we undertake. Having a positive impact is at the heart of everything we do. We aim to minimise our environmental impact and to be net zero by 2035 in our operations and transport.

We must reduce our environmental impact and tackle climate change to benefit our clients, our company, and the planet. It is imperative that everyone contributes to this effort. We bear the responsibility of ensuring that the growth we promote is sustainable.

Aligned with our commitment to the United Nations' Sustainable Development Goals, we have pinpointed three global goals where we can significantly contribute to environmental sustainability:

We are dedicated to the Paris Agreement and its objective of limiting the rise in global average temperature to below two degrees Celsius.

To minimise our environmental footprint, we have established ambitious targets and continuously review our policies and practices to ensure consistency across all our activities. We believe that sustainability should be a key factor in all our business decisions. To this end, we must clearly communicate our environmental goals and support our people in aligning with them.

We are committed to achieving green growth by delivering sustainable services across our event delivery. We also see the opportunity to lead in sustainability, demonstrating to our clients, suppliers, and stakeholders that a strong environmental strategy can create business value, reduce enterprise risk and ensure long-term success.

To guide our approach to minimising our impact on the environment and addressing climate change, The Insurance Hall has adopted key principles through which we will:

- comply with, and exceed where practicable, all applicable environmental legislation, regulations and codes of practice
- integrate sustainability considerations into business decisions and our approach to risk/opportunity management
- optimise and reduce our business inputs across energy, paper and single-use plastics
- assess and minimise our outputs across waste and overall carbon emissions to eliminate waste to landfills and achieve carbon neutrality across business operations
- set targets for, undertake regular reviews on and ensure continuous improvement of environmental and sustainability performance
- communicate regularly on progress/achievements against environmental commitments
- raise awareness of environmental issues and deliver training to employees encouraging responsible behaviour and empowering them to play a leading role; and
- communicate and engage with suppliers, partners and clients to encourage them to adopt equivalent (or superior) sustainability management practices

Our objectives are to optimise inputs, reduce outputs and advocate for sustainability. Please find more details on our website about how we aim to achieve these objectives through our Environmental Policy
