

# Galleon Studios

A space as big as your imagination

## Brochure & Rates

4k fully equipped studios  
exclusively for video, film  
and TV

**Galleon Studios** is a fully equipped studio space located just off the M62 in North Manchester. We have a wealth of filming experience and the capabilities and kit to make your project a reality. This brochure details the facilities and equipment as well as rates and pricing here at Galleon. We look forward to welcoming you

"Beyond helpful and lovely, the studio itself has everything you could need and access and location are perfect for shooting. Plus...tea, coffee and sweets that are unlimited...a winner!! Highly recommend to anyone needing a green screen space to shoot in!"  
Shona Brown, Producer

## The Infinity Cove

The Infinity Cove is the largest studio space consisting of 2 curved walls, lighting grid and ample space to film. The area is sound dampened with 10 inch roof insulation, and sound battened walls so audio can be recorded. The infinity cove is generally green and it is always freshly painted with Rosco video paint prior to any hire. The space can be repainted and it's size is such that it can be used for set design and construction as well as vehicle filming.

"An excellent studio space packed with great facilities. They pull out all the stops to make the shoot successful."

Nigel Bradley, DOP

## The Soundproof Studio

The Soundproof studio is a more intimate space, perfect for small sets, pieces to camera and interviews. The softened walls mean a noiseless experience allowing you to film uninterrupted in a comfortable air conditioned environment. Use it with the teleprompter or interrotron to coax the best from your talent.

*"The place feels like a treasure trove of a film studio and any bit of kit that we suddenly decided would be nice to use was invariably there and made available to us!"*  
Sean Waring, Producer

# Galleon Studios

convenient location,  
enviable reputation

## Floor Plan

"The studio is the  
perfect size"  
Angela Russell, Producer, BBC

## Kit Highlights

### *The ATEM Live Keyer*

See your final key as you shoot by hiring our live keyer. If you know already what your background is going to be the keyer can be a real boon to your production allowing you to light the green screen to match your final effect.

If you're filming green screen this piece of kit is essential

### *The Interrotron*

The interrotron allows a director or interviewer to communicate "face to face" with a contributor and encourages a natural conversational flow. What's more the eyeline of the interviewer means the subject looks right down the camera lens and engenders greater engagement by the viewer. The Interrotron is a must for TV interviews, talking heads and pieces to camera.

### *The Green Screen Treadmill*

Your production needs a character walking through a virtual environment.

The best solution is to have that character walk without moving and to achieve that you need our green screen treadmill. Painted fresh before each hire the treadmill can operate at a variety of speeds to suit your final effect.

### *Canon EF Glass*

We have Canon, Samyang and Sigma lenses available to hire most with a low f-stop making them super fast and crisp. A good selection of primes and zooms detailed below:

**Samyang 14mm, 24mm, 35mm, 50mm, 85mm, 135mm**

**Canon 50mm, 18-135mm, 18-55,**

**Sigma 105mm, 28-70mm, 10-20mm, 70-300mm**

## Cameras

At Galleon Studios we want to offer a wide selection of camera options for our clients. As such you can hire full broadcast cameras capable of shooting 4K and UHD, DSLR's and HD cameras as well as 360 cameras. All are available with tripods or optional supports like jibs, gimbals and track and dolly..

Talk to us about your camera needs and we can help

## DitoGear Moco Rig

The DitoGear motion control rig is a truly state of the art piece of kit; able to repeat complex camera moves through nearly 360 degrees. It operates along a 2 meter long slider and is controlled via a laptop, remote control or an app. It is also capable of being used vertically as well as horizontally and even upside down!

## Autocues

Your talent will never be lost for words again when you hire one of our teleprompters for your shoot. With a super wide viewing angle for maximum use the prompter supports word docs, pdfs, text documents and even powerpoint. Available to hire with or without an operator

## The Odyssey 7Q+

To give you a larger colour space for keying as well as increased data rates we suggest the Odyssey 7Q+. The 7Q+ is a hard drive recorder with HDMI and SDI input and is capable of recording a variety of codecs at different resolutions to offer greater flexibility in post production. Simply plug your camera in, choose your settings and record using the recorder rather than your camera.

## Kit List
