

Acne and Pigmentation

Pure Confidence:

Now, you can clear mild to moderate inflammatory acne without side effects, discomfort, photo-sensitivity or downtime. Acne Clearing treatments utilize a high intensity enhanced light source to permeate the tissue to destroy acne bacteria quickly and easily – with no side effects, no downtime, no pain, and without the exposure to antibiotics. Typically, just ten treatments over a four week period will greatly improve the appearance of skin. Your PURE medi-spa skin consultant will provide you with a complimentary skin analysis to help you understand how to achieve healthy, more beautiful skin with Intense Pulse Light Treatments for Mild to Moderate Acne.

TYPES OF ACNE PIMPLES

About Acne:

Acne can affect us at almost any age, typically it begins during adolescence, when hormonal changes cause the enlargement and obstruction of sebaceous glands in the skin. Consequently, many people experience an abnormal proliferation of bacteria, predominantly propionibacterium acnes (*P. acnes*). This typically causes painful, inflamed lesions that can appear on the face, chest, back, limbs and virtually any other part of the body.

IPL Acne clearing is just one of the many excellent skin-improving treatments offered by PURE medi-spa. Other popular treatments include Botox injections, Restylane injections and Laser Hair Removal.
