

3039 Quick Coupling Valve and Key

Simple, Fast and Effective.

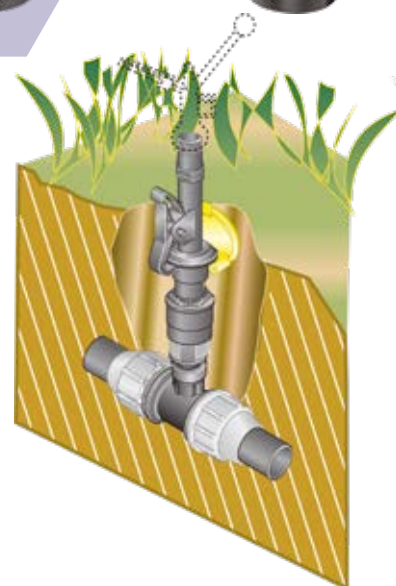

The Quick Coupling Valve allows temporary access to a water sprinkler system with the use of a valve key.

Applications

This ground-level fixed valve presents no unsightly or dangerous obstructions and stays damage free.

Ideal for:

- Livestock watering systems.
- Sprinkler irrigation systems.
- Landscaping irrigation.

KEY FEATURES

- Single-action snap-in key opens valve for water flow into hose/sprinkler. Just snap key in place at the desired fixed valve position, and you're ready to go. No turning water mains on and off.
- Time-saving and money-saving.
- Highly durable and reliable.
- Easy release of key, automatically shuts valve.

3039 Quick Coupling Valve

Single-action connection

Configuring animal troughs or sprinklers for irrigation is more flexible, quick and easy. Just snap the key in place at the desired fixed valve position, and you're ready to go. No turning water mains on and off - it's all done instantly due to the special features of PLASSON'S Quick Coupling Valve System.

Highly reliable and durable

The Quick Coupling Valve materials withstand the most adverse conditions.

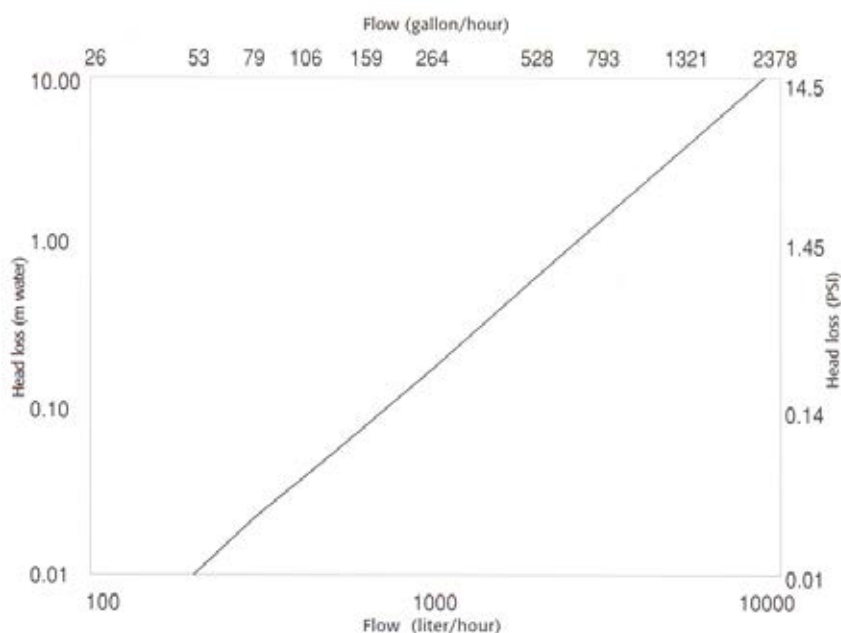

Body: polypropylene and acetal

Spring: stainless steel

Seals: NBR

* Not for use with hot water.
For use with fluids other than water,
please consult PLASSON.
