Airline Retailing Maturity index

Schema version 21.3

In the Airline Retailing Maturity (ARM) index registry, many companies have capabilities verified against version 21.3 of the schemas.

Following the initial release of 21.3, several fixes have been applied to 21.3 such that the major version has not been incremented, but a minor version shows the patched schemas.

The label of 21.3 in the ARM index registry relates to all versions of 21.3 including the patched minor versions released within various ATSB releases over the years.

ARM index capabilities verified on 21.3 can have been verified against:

- 21.3 within ATSB release 21.3 in October 2021
- 21.3.1 within ATSB release 22.1 in January 2022
- 21.3.2 within ATSB release 22.2 in May 2022
- 21.3.3 within ATSB release 22.3 in July 2022
- 21.3.4 within ATSB release 22.4 in December 2022
- 21.3.5 within ATSB release 23.1 in January 2023

Each capability in the ARM index submitted for review must pass a verification process and a validation process. XML messages developed against any of the above versions can pass the initial technical verification process. The validation process is based on the evolving EASD Implementation Guidance.
