

CLIMEX®

Climex Fan Heater 3

Climex Fan Heater 3

The Climex 3kW Electric Heater is a small and portable unit, designed to provide localised heating for small areas.

It provides the highest level of electrical heat available from a 110v supply.

An easily adjustable internal thermostat enables the heater to maintain a specific temperature.

RVT offer a wide range of electric heaters ranging from 1.5kW to 42kW; ask us for more details.

Key Product Features

- ✓ 3kW heat output
- ✓ Variable heat settings
- ✓ Portable
- ✓ 110v 32a

Key Applications

- ✓ Heating of small areas
- ✓ Maintaining ambient temperatures
- ✓ Drying paint and plaster

Model may vary depending on your requirement

CLIMEX®

Climex Fan Heater 3

Technical Specification	
Heat Output	3 KW
Heat Output	10,236 BTU
Airflow	423 m3/h
Ducting diameter	N/A
Plug	32a 3-pin
Voltage	110v
Running Current	25 amps
Internal Thermostat	Yes
Remote Thermostat	No
Overheat protector	Yes
Length	330 mm
Width	300 mm
Height	360 mm
Weight	11 Kg
Noise	45 dBa

The Effective Drying Triangle

When used for drying, we recommend adopting RVT's Effective Drying Triangle, which incorporates warmth, air movement and dehumidification.

Warmth/ heat raises the room temperature and so lowers the relative humidity of the air. Air movement across a substrate draws the water to the surface, where it evaporates, and dehumidification extracts water from the air. Speak to one of our consultants to learn more about effective drying-out programmes.

Example of electric heater used to dry out paint work and provide ambient heat whilst other trades continue working.
