

Climex Spill Kit

An oil spill can have a serious impact on the environment if it enters the drainage system or contaminates the land; it is therefore essential to contain and clean the spill immediately.

This kit contains 20 flat spill pads which are designed to absorb oil spillages. They can be placed underneath a heater or other diesel machinery during refuelling to catch any spillage. Alternatively, they can be used to mop up or wipe down spillages. This kit also contains 2 socks which can be used as a buffer to reduce the spread of large spills. Finally, you can easily dispose of the pads and docks using the waste bags and ties.

The Climex Spill Kit is for the absorption of oil based liquids on land or water, including; vegetable oil, mineral oil and most hydrocarbon derivatives. This means it is suitable for diesel and HVO fuel

Key Product Features	
✓	Absorbs all oils and fuels
✓	Absorbs up to 30 litres
✓	Vinyl holdall to carry spill kit straight to oil spills on site

Key Applications	
✓	For oil spillages on site and from diesel machinery

Technical Specification	
Dimensions	500mm x 400mm
Absorbency	30 litres
Usage	To clear up spills only
Characteristics	Absorbs all oils and fuels, weatherproof
Included:	20 Pads 2 Socks 2 Waste Bags and Ties Supplied in a Vinyl Holdall
