

A new learning experience

Modern online training for helicopter pilots

Trusted by:

Stay Qualified

Smooth and friction free training for people on the go.

Although the helicopter industry is safety conscious and demanding, it's been missing a very crucial aspect for pilots. That is, affordable and relevant training for rotary wings. Therefore, [Scandlearn](#) has expanded to serve and provide the rotary industry with contemporary online training, all in an enjoyable format.

“Everyone I have interacted with at Scandlearn has been competent, friendly, and knowledgeable. All this has helped to make moving to Scandlearn an extremely positive and beneficial experience.”

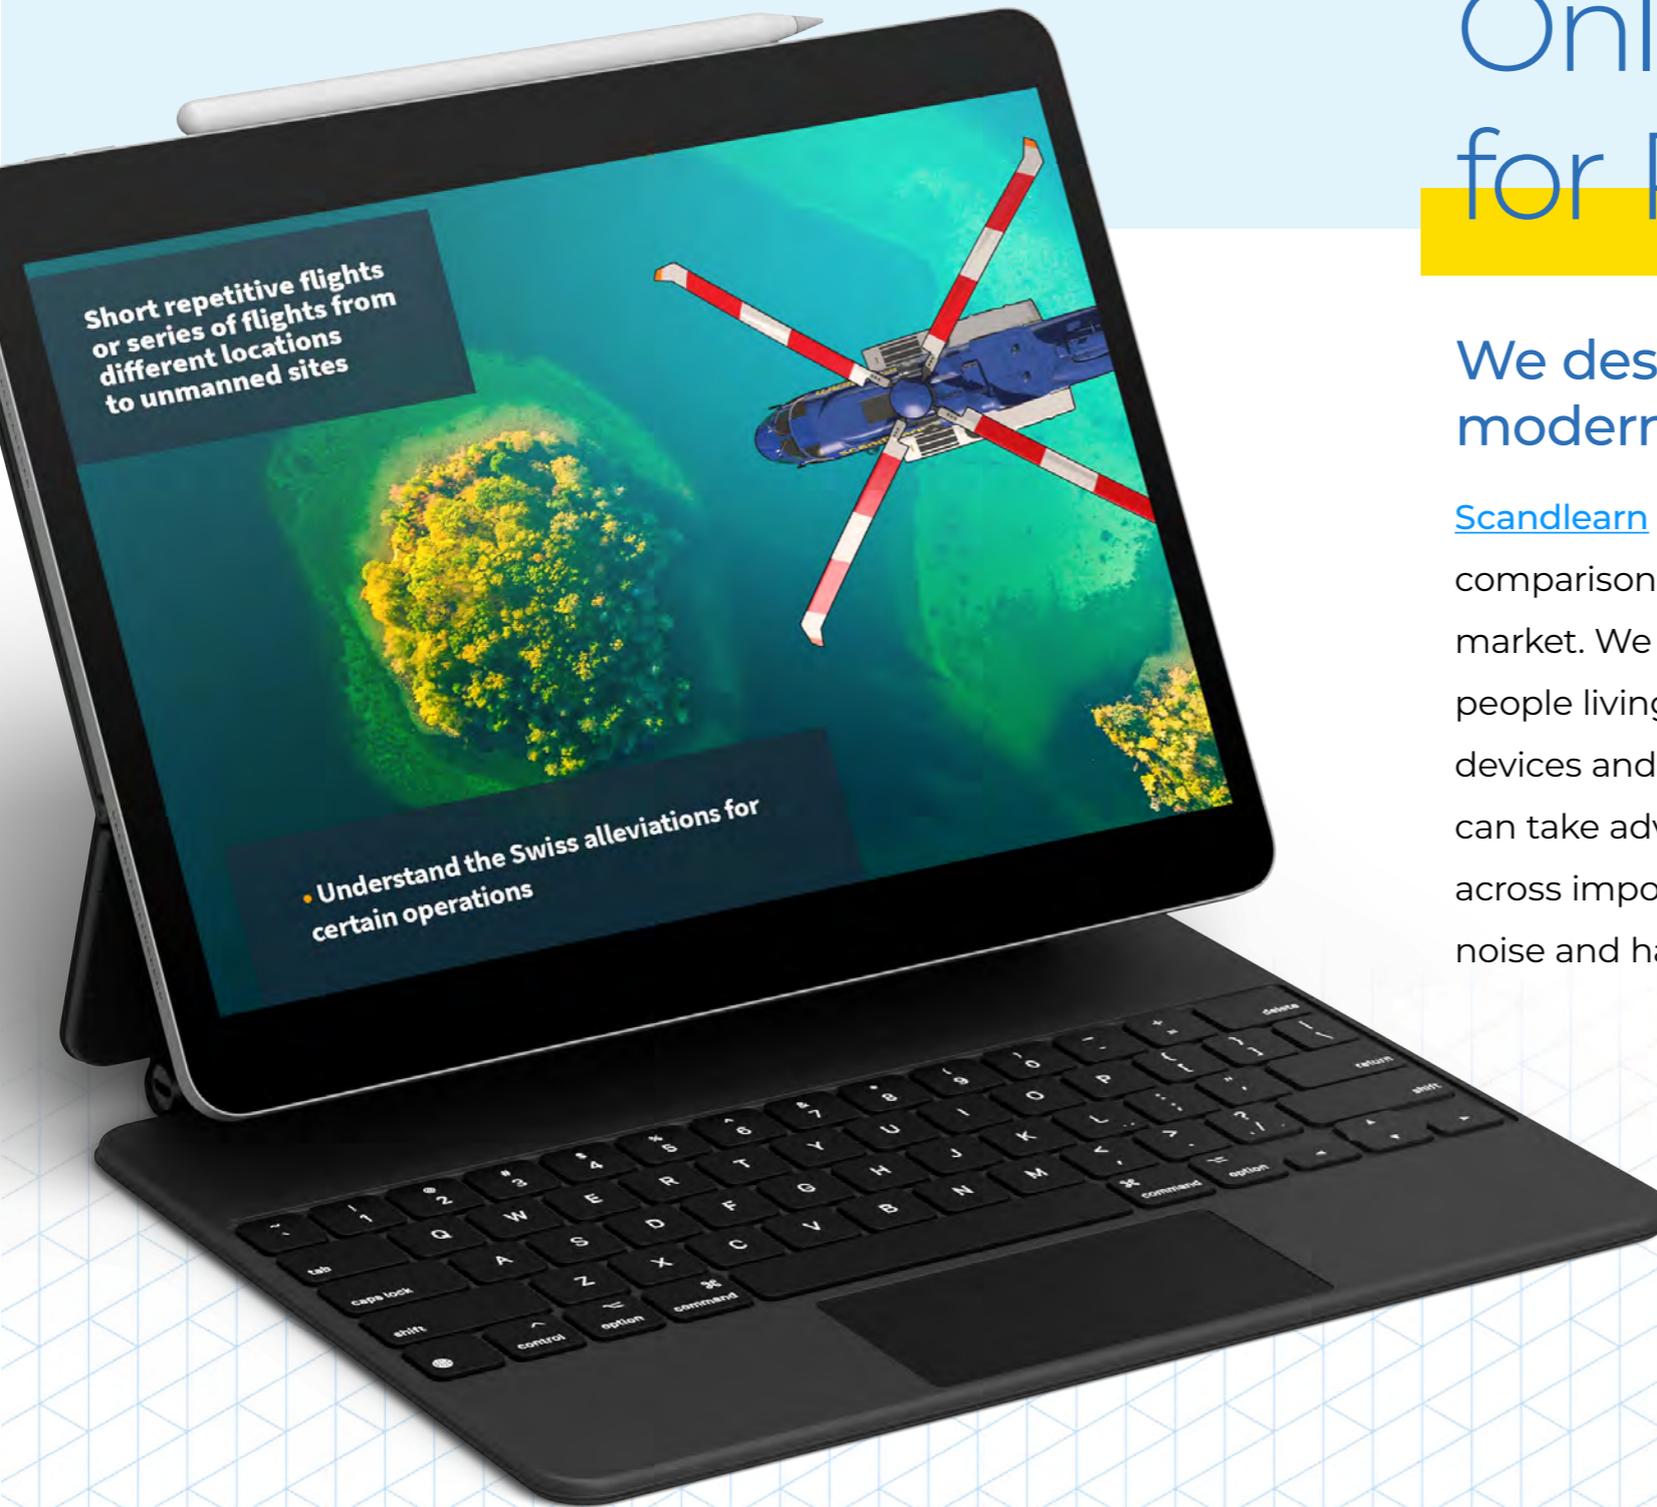

Andrew Johnson
Aircrew Training Manager
Babcock Onshore UK

Online Training for Rotary Wings

We design with the
modern human in mind

[Scandlearn](#) has a unique approach to learning in comparison to other e-learning providers on the market. We have reimagined training to engage people living in the 21st century. With numerous devices and apps available, we believe that training can take advantage of this technology to get across important information, break through the noise and have a stronger impact.

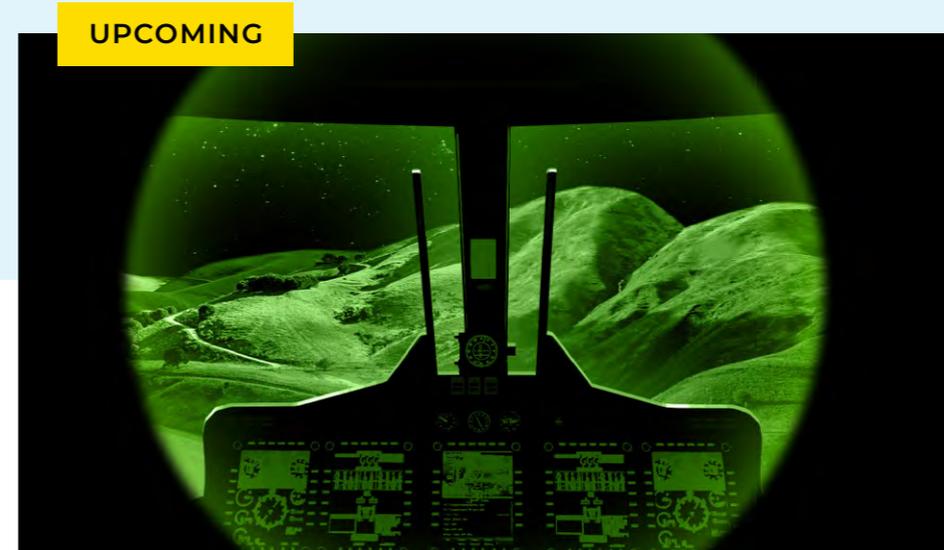

Safety awareness comes from understanding and breeds confidence. Safety is built on a good, solid foundation. Safety starts with training.

Dangerous Goods

This unique DGR training is only for helicopter pilots. Scandlearn has created a compliant, yet compressed, 53 minute long DGR training course which is applicable for rotor operations. This course, consisting of 11 modules, will approve your personnel in accordance with EASA, IATA and ICAO regulations.

Night Vision Imaging System (NVIS)

This upcoming course will help to train pilots to safely conduct night operations with the use of Night Vision Goggles (NVG). This course gives understanding of the basic principles such as eye physiology, vision at night, limitations and techniques to overcome these limitations. It will also prepare you for the test of NVIS equipment and for aircraft operations and how to operate in normal and emergency procedures. It will cover all theory training to make pilots confident using Night Vision Imaging System (NVIS) and Night Vision Goggles (NVG). The course meets the theoretical requirements of EASA regulatory framework as stipulated in SPA.NVIS.130 and AMC1, GM1 SPA.NVIS.130

UPCOMING

Helicopter External Sling Load Operations (HESLO)

This upcoming online course will give the helicopter flight crew the required knowledge of Helicopter External Sling Load Operation (HESLO). It will start with an introduction and cover Regulations and national differences, the physical and aerodynamic aspect. We will also cover Flight preparations as well as advanced sling load operations and finish off with a section on the flying itself. The course meets the theoretical requirements of EASA regulatory framework EASA Air Operations Part SPO.SPEC.HESLO and FAA CFR part 133 and advisory circular 133-1B.

UPCOMING

Human Factor - Single Pilot Resource Management (SRM)

This online training is a highly requested course for pilots operating on their own. Operating in a single pilot operation compared to a multi-crew environment can be quite different. The CRM system that is mandated for multi-crew aircraft differs from SRM to a large extent with all the challenges that single pilots are facing. Scandlearn is, therefore, focusing on giving a comprehensive online course for single pilots through the SRM training. This course is designed for Flight Crew during Initial SRM training, Operator Conversion course, Annual Recurrent training and Command course.

Other courses from our library suitable for helicopter pilots

- > Aviation Security
- > CRM and Airborne Emergency
- > Dangerous Goods for Helicopter crew
- > EASA Regulation Scandlearn
- > Electronic Flight Bag EFB
- > EU Ramp Inspection Programme
- > Fatigue Risk Management System
- > Fire and Smoke
- > First Aid
- > Flight Time Limitation FTL
- > Food Safety
- > Fuel Tank Safety
- > Mental Health in Aviation
- > Minimum Equipment List
- > Pandemic Awareness Training
- > Pilot Incapacitation
- > Safety Management System (SMS)
- > Survival
- > Threat and Error Management
- > Volcanic Ash

The video content from Scandlearn is a very attractive format that is fresh, modern and fun. The knowledge is better retained, and better correlated with real-world scenarios.

Just a few clicks from approval

Operators

Our ecosystem is a one-stop solution, designed to keep training managers up to date with crew qualifications and to immediately meet the authoritative requirements, in one [single app](#). Scandlearn's core solution has its own automated engine that will follow you wherever you go. This makes it easy to pick up and perform your actions at any given time. You can track and monitor your crew qualifications in real time from the dashboard.

GET STARTED

- 1 Invite Crew
- 2 Enrollment
- 3 Tracking & Monitoring

Solo Pilots

We provide helicopter pilots with a smooth solution whereas you can conveniently get access to the training you need from [scandlearn.com](#). Login to your preferred device and finish the course with a skills test. Off grid? No problem! Simply download your training content before you plan to be offline. You can then upload your results the next time you have wi-fi access. Your certificates will be available once the course is finished, via the dashboard.

About Scandlearn

We've serviced over 600 operators worldwide.

Scandlearn started 2001 with the mission to make training accessible and affordable for all. Since then, Scandlearn has made its success in the fixed wing branch and delivered over 60 online courses for operators and organizations of all sizes. We are happy to be able to expand to the rotor industry and currently serving over 80 helicopter operators, amongst these you will find companies such as Bristow, CHC, PHI, Babcock and OMNI.

Scandlearn's philosophy is to make training an enjoyable experience. Therefore our design and production is different from others. Our courses are handcrafted in a unique style by our design team and can be distributed to all devices, both on and offline. The combination with our training management system and top of the line courseware, makes the experience smooth and friction free for both learner and training manager. Ask for a demo to explore what our training management system can offer your company and help you with your needs.

[Learn more](#)

Scandlearn is a popular and much appreciated company due to the fact that we follow our mission and stay true to our core values. Here are 4 main reasons why customers choose Scandlearn as their training provider:

**COMPLIANCE**

The primary reason why customers choose Scandlearn is because we are careful and correct in our compliance. Clients barely have to think or worry about these matters as we do it for you! Scandlearn will always keep you up to date and we will also notify you when an update has occurred.

**INNOVATIVE**

Scandlearn is a bold company and we believe in better training. With a new innovative learning approach, we trust in our capacity of delivering the best possible training on the market with the management solution that comes with it. But we don't settle there.

**VALUE**

People tend to say to us that Scandlearn gives them more value for money than they are paying for. Our mission is to make training accessible for all and, therefore, we've made it easy to scale with us. Our products and services have been designed with you in mind as we strive for your success. We aim to provide you with better training and better solutions.

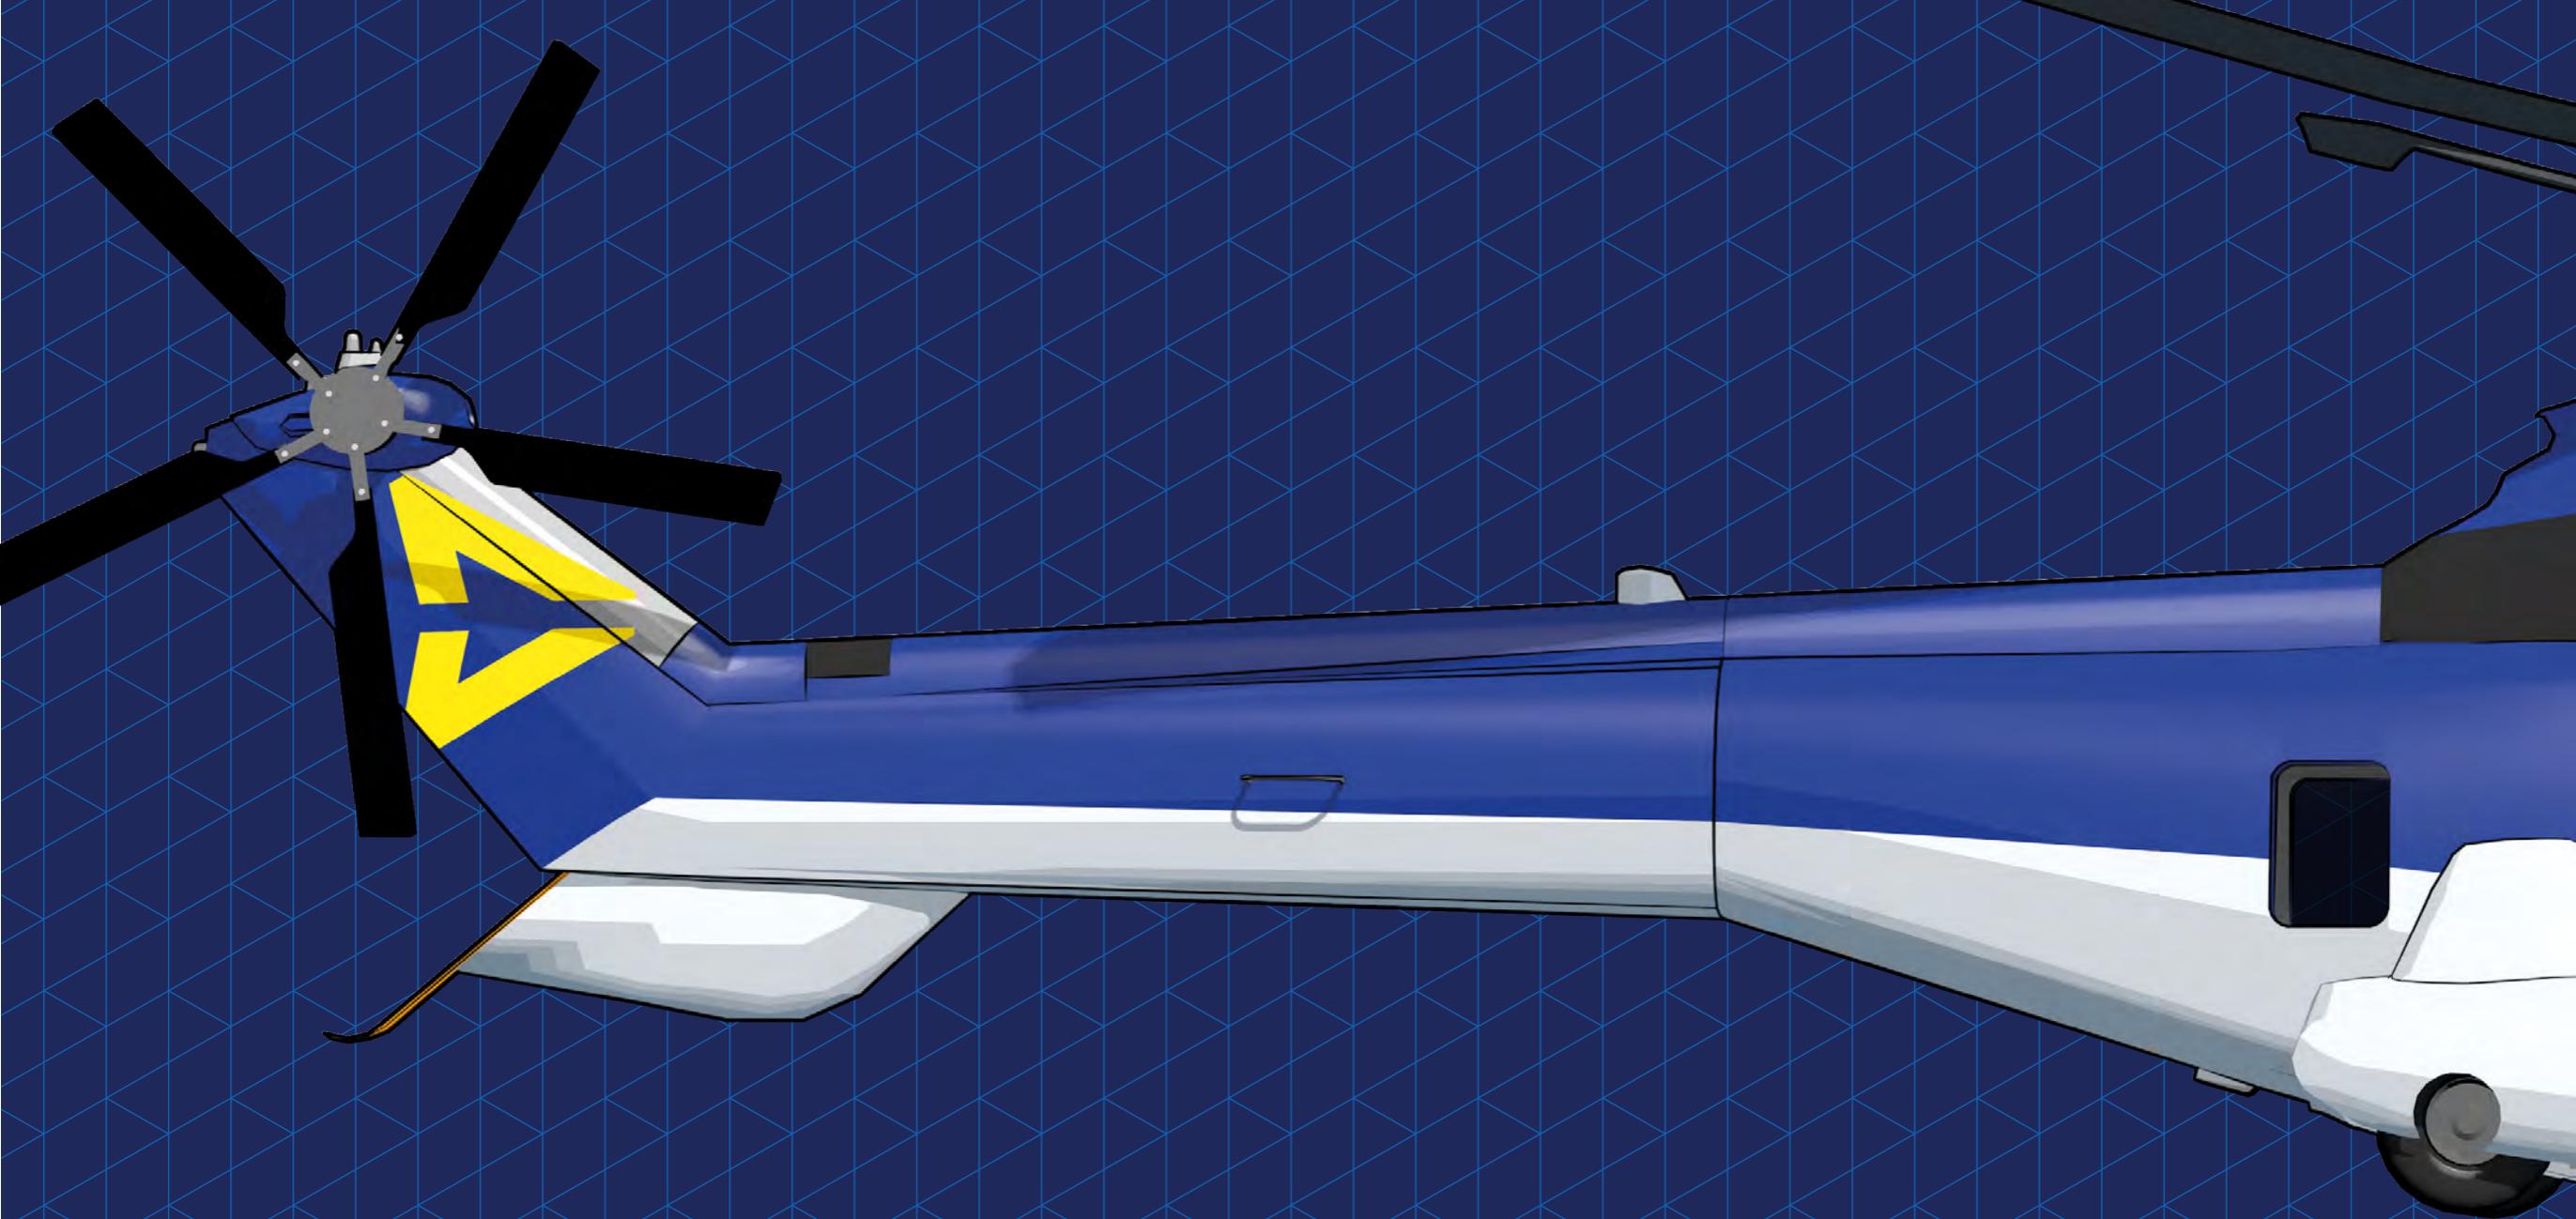

**IT'S EASY!**

Smooth and friction free has been one of our main philosophies when it comes to designing products and services. We want to serve everyone with the best and most enjoyable training experience.

“When the material arrived it was so much better than our previous training package in its content, quality, and style of delivery. No other provider I spoke to offered this level of customer service or quality of the product.”
