

BEAN IN A JAR

Learn about germination with a bean in a jar. The seed will germinate and grow with just water, then you'll need to plant it in soil for it to finish growing.

THREE FACTORS AFFECT GERMINATION

OXYGEN

WATER

TEMPERATURE

You'll need

- Bean seed
- Jar
- Cotton wool or paper towel
- Water

Germination is the sprouting of a seedling from a seed.

Instructions

Swirl a small amount of water around the jar.

Fold your napkin or kitchen roll and place it in the jar (we also made the kitchen roll very slightly damp).

Place the bean seed in the jar resting on the napkin.

Spray some water on the bean every few days.
