

EGG TOOTHPICK TOWERS

You'll need

Toothpicks or cocktail sticks
Plasticine
Paper
Chocolate eggs

Instructions

Design and build a structure that can stand up with no extra support and hold a small chocolate egg without collapsing.

Top Tips

Test the structure with a small toy chick or rabbit before the chocolate egg.

Think about the shapes you use. Triangle shapes are stronger than squares.

Triangles, arches and domes are all strong shapes and are used by engineers to make structures strong.
