NAME .....

STICKY SEEDS

I am trying to find out .....

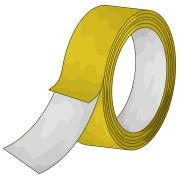

I predict that .....

Materials

Velcro
Double-sided tape
Paper
Pom poms or a small seed
Small containers
Glue
Sellotape
Clothing to test

Instructions

Gather together a collection of materials you think you can use to make a sticky seed pod.

One idea is to wrap a pom pom or small seed in paper and then attach a sticky material (perhaps double sided tape) to the outside.

How far can you walk before it falls off?

Test different types of clothing to investigate which your sticky seed attaches to for the longest.

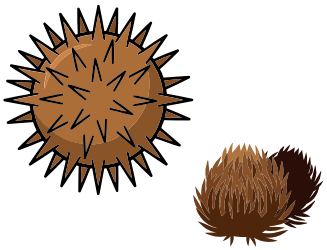

ONLY use clothing you don't mind getting a bit sticky

Seed dispersal is the scattering of seeds. If seeds just dropped next to the parent plant, they would be competing for nutrients and light. Some plants use animals to spread their seeds for them. This type of seed usually has sticky hooks so it can attach to an animal's fur.
