

STRAW ROCKETS

1. Decorate the flying part of the straw rocket. Use one of the cut out shapes, or just decorate the folded paper

2. Place the rocket on the end of the straw, and blow as hard as you can. It should fly across the room!

If it doesn't work, check the paper is sealed properly, so no air can escape.

3. Place a paperclip on the end of the rocket. Does it fly as far as it did without the paperclip?

Blowing down the straw **PUSHES the rocket into the air!**

What's going on?

When you blow air down the straw it travels to the end and pushes its way out, taking the rocket with it as it moves. The harder you blow into the straw the further your rocket will fly!
