Humanitarian Needs Overview

Shelter, Energy and NFIs

For several years, and in the context of a prolonged economic crisis, Venezuela has been impacted by a human mobility crisis and a progressive deterioration in the access to basic services.

Since 2020, and in the context of COVID-19 pandemic and focalised violence situations, **human mobility** has become more dynamic, incorporating an influx of returnees, with incoming **needs for temporary shelters**. The common use of informal cross borders has led to protection risks, including people involved on pendular movements to obtain their means for subsistence.

Additionally, impact of continued **natural disasters**, including heavy rains and floods, have generated significant needs of basic NFIs, temporary shelters and preparedness for risks mitigation and response.

Access to basic services including access to energy, has been compromised in several regions of Venezuela, leading to a significant impact on the life quality, including impacts in food preservation, possibility to provide education, livelihoods, among others. This has provoked significant life-threatening risks and environmental impacts associated to the massive use of firewood as a source of energy for cooking, use of gasoline, kerosene and improvised connections to the national electric network.

In the context of the pandemic and economic crises, the infrastructure of institutions providing essential services to population such as health institutions, community spaces and schools lacked maintenance and **worsened their shelter conditions**, including access to energy, disabling their possibilities to save lives of the most vulnerable population.

Urgent humanitarian assistance is needed to provide a critical response:

Improvements on **temporary shelters and access to NFIs** are required to support **people on the move**.

Basic NFIs, temporary shelters and construction capacities are required for people affected by **natural and anthropic disasters**

Repairs, constructions and improvements for community spaces and institutions providing basic services is required.

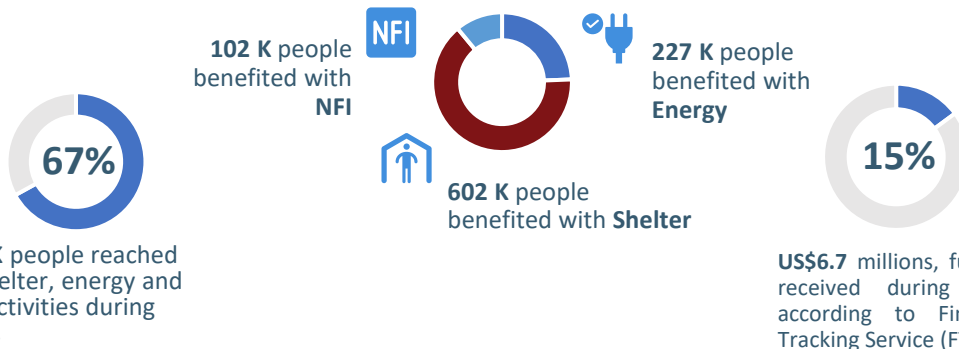

Access to renewable sources of energy is required to **fulfil the basic needs of the most vulnerable population** and represents an urgent priority for remote areas.

Response in 2021

94 health centers were benefited from repairs, energy improvements and NFIs, providing an important support to the COVID-19 pandemic prevention, including the support for triage and vaccination areas. **35 temporary collective** centers in border areas (including PASIs) were benefited by the response, focusing on supporting vulnerable people on the move. **78 community centers** and **21 schools** providing protection and essential services to population have been benefited through shelter, energy and NFI response.

222 refugee housing units (RHUs) were installed: 104 RHUs in health centres, 24 in collective temporary shelters and PASIs, 21 in military and civil coordination authority spaces, and 73 in community spaces, community centers, institutions, communities, authorities and other locations. **87 centers and institutions** including temporary shelters were benefited by rehabilitations and extensions.

1106 street solar lamps were installed in public places, including the surroundings of institutions benefited by the response, to provide illumination also preventing associated protection risks. **42 electric systems**, including photovoltaic systems for institutions, organizations, community centers and collective shelters, were installed allowing access to basic services for the most vulnerable population.

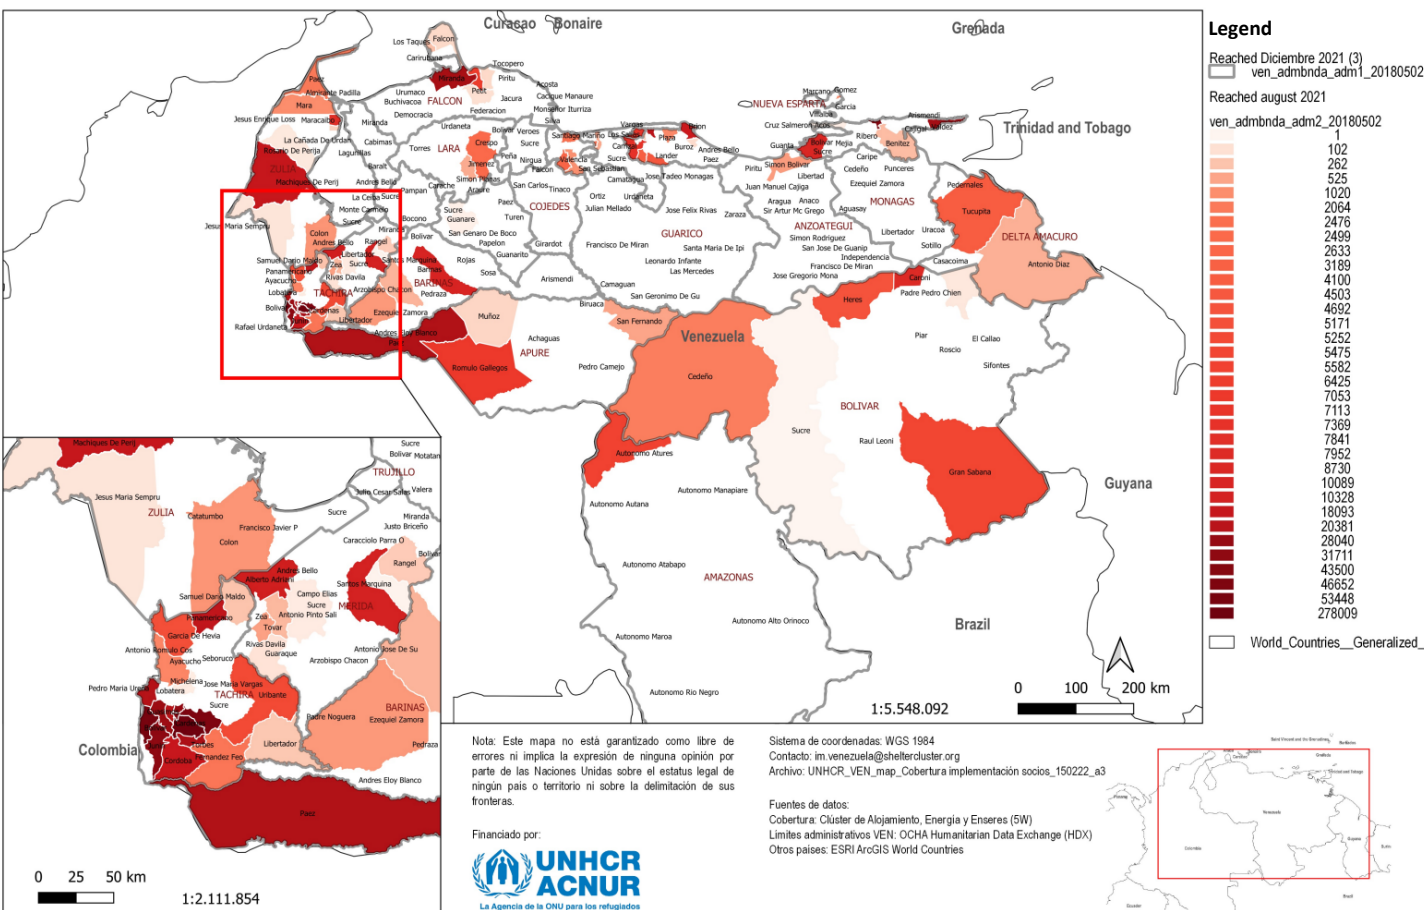

Basic NFI distribution was critical in the assistance of vulnerable people specially those affected by flooding and by armed conflicts. NFIs delivered included **14,037 portable solar lamps**, **2988 habitat kits**, **1852 family kits** and **845 individual kits**, comprising critical items like mosquito nets and insect repellents to prevent extended diseases, pads, sheets and cooking items, rechargeable fans, among others.

Response coverage in 2021

Humanitarian assistance covered 18 states and Capital District:

Beneficiary from community space, Miranda. Credits: Fundación Vivienda Popular.

Planned results for HRP 2022-2023

Humanitarian actions to guarantee better access to shelter, energy and NFI

For the **HRP 2022** 27 partner organisations submitted 26 projects proposal, including 24 intersectoral projects to guarantee safe and dignified shelter, access to energy and/or basic NFI to affected population.

To address humanitarian needs, including new challenges related to COVID-19, and guarantee relief to more than 1,9 M people in need, partner organisations require \$54 M.

Cluster partners will focus their actions on five **objectives for 2022:**

- 1 Assist with construction, expansion, rehabilitation, access to energy and equipment for critical health services
- 2 Assist with construction, expansion, rehabilitation in spaces that provide essential services; and with secure and dignified access to shelter
- 3 Assist with better access to energy in communities, community centers and institutions
- 4 Assist with better access to basic NFIs and providing equipment for spaces and institutions that provide essential services
- 5 Assist to institutions and communities in prevention, mitigation and response to emergencies due to natural disasters with temporary shelters, energy and NFIs.

 **For HRP 2021:**
27 partner organisations*

 **Submitted:**
26 project proposals*

 **To assist:**
1,9 million people*

 **In:**
17 prioritized states*

 **Funding required:**
US \$54 millions*
