Coordination Meeting

Khartoum • Sudan • 23rd Mar. '22

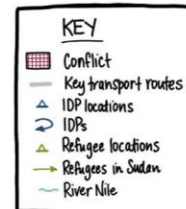

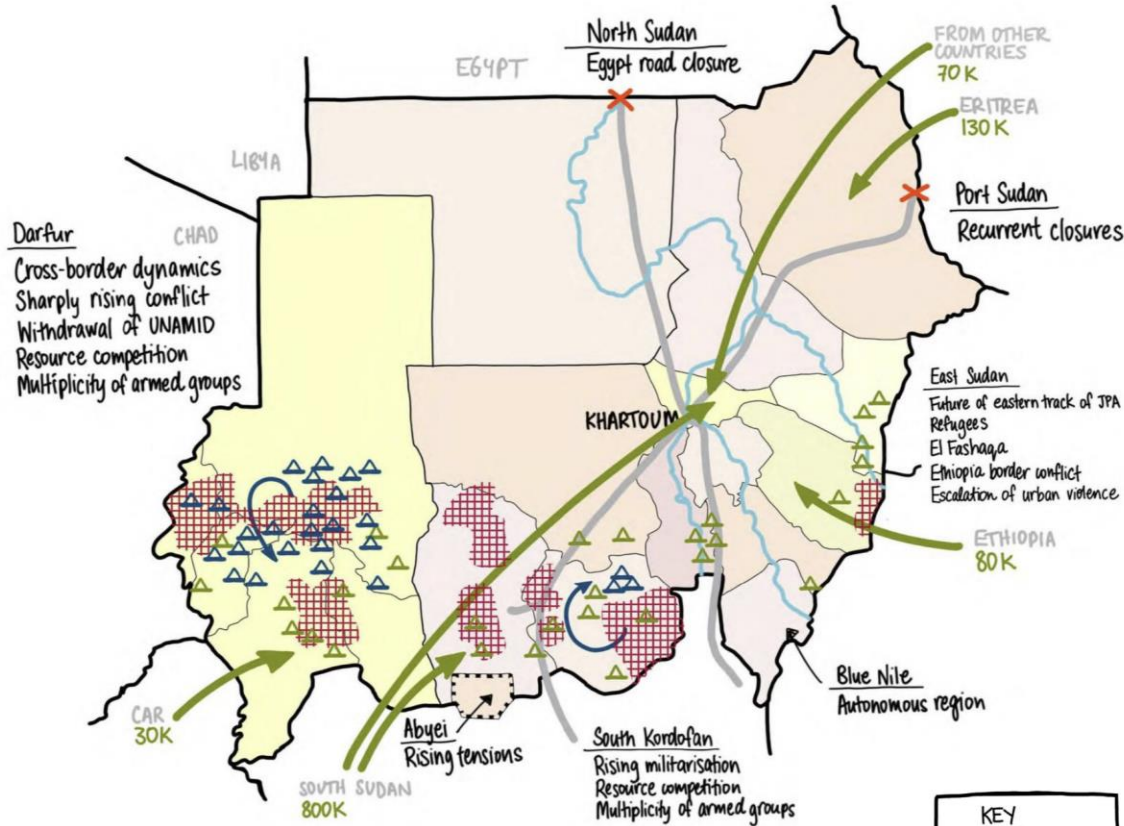

- 1 General Updates** (12:00 - 12:15)
 - Review of Action Points
 - Situational Update
- 2 '22 Reporting** (12:15 - 12:30)
- 3 COOPI Presentation** (12:30 - 13:15)
- 5 AOB** (13:15 - 13:30)

SNFI Cluster Coordination meeting | Feb 2022

Main Themes	Discussed Points	Action Point
<p>Review of the Action Points</p>	<p>The Shelter and NFI Cluster Coordinator, Iva Vavic, opened the meeting with a review of past action points:</p> <ul style="list-style-type: none"> • Issues around disparity between the FTS sectors specific funding levels and people reached figures have been raised with OCHA. Other cluster coordinators reported having the same problem and OCHA suggested a formation of the task force to unpack this, but also to look at the broader ERP process so we can be more agile in the face of emerging crisis. • Possible solution to accurately reflecting the sector funding level (in light of FTS unreliability) is to base it on achievements and activity-based costing, so the task force will also look into improving monitoring and reporting, specifically people reached numbers. The challenge for the S/NFI cluster remains identifying unique beneficiaries to avoid compounding numbers of people reached with Shelter and NFI assistance, since more often than not, these are one and the same people, as well as distinguishing between full kit (as per the cluster standard) and partial kit distribution, as it sends a very misleading picture to the donors, of achieving quite a lot with very little, which is far from the case. • Stock Mapping was also raised at the ISCG level, and the consensus was this should be regularized so we can improve preparedness and predictability in the face of uncertainty. OCHA suggested stock mapping takes place on quarterly basis. The S/NFI Cluster will create a public dashboard to reflect all partners' stock levels which will be hosted on Global Shelter Cluster (GSC) website. 	<ul style="list-style-type: none"> • Keep partners informed on the outcomes of the ERP review TF and the NATT.

What is happening?

- Grave situation in Jebel Moon due to repeated successive attacks
- A series of fire incidents country-wide
- Economic collapse - Sudanese Pound on the uncontrollable rise
- Fuel and electricity prices more than doubling in one month's time
- Global impact of the war in Ukraine

Impact on operations?

- Access issues due to insecurity
- Increased operational costs
- Increased prices of construction materials and NFIs on local markets
- Shortage of relief supplies and fuel
- Increasing criminality

MSNA - Multi-Sectoral Needs Assessment

- **No donor support** for the MSNA this year - some feel the exercise is not valuable in the current context given **the high volatility** and the fact results may become obsolete quickly.
- Based on previous years' experience the quality was also questioned - last year when PiN and Severity calculations were due **only 40% of MSNA data was available**.
- There was a discussion at ISCG on whether we should just **cancel** MSNA this year, but Cluster Coordinators agreed **it should go ahead if it can be done in a quality manner**.
- However, there are already problems early in the process. It was confirmed **sampling** will be done only at **state level**, yet **OCHA** requests **PiN and Severity** calculations be done at **locality level**.
- Same as last year this may lead to a **poor quality dataset** and therefore **inaccurate** PiN and Severity numbers, since some localities may be **excluded altogether** while in others we may **not have a representative sample**, particularly because last year only approx. **5,000** people were surveyed across the country compared to **3M IDPs**

Reporting - People Reached Numbers

- **The numbers you report or don't report impact funding prospects for all partners.**
- **CERF UFE window allocation** was based on people reached numbers.
- It is important we don't mistakenly show **overachievement** with little resources we have. Therefore, we need to distinguish between **full kit** and **partial kit** distributions, as well as make sure there is **no double reporting** by organizations providing the kits and those distributing them.
- OCHA would like us to increase reporting frequency for the **ERP indicators** to **monthly reporting**.

HH Question	Type	Choices	Comments
What type of settlement does your household live in?	Select one	<ul style="list-style-type: none"> • City/ Town • Town • Village • Camp • Temporary, informal settlement • Other (specify) 	<p>It will be hard for enumerators and responders to distinguish between City and Town therefore I propose you combine them for simplicity.</p> <p>Also, informal settlements are not necessarily temporary, so again a slight amendment for simplicity.</p>
If a camp, which camp? If there is no camp in this locality, this field is empty. Please specify the name of the settlement your household lives in.	Select one	Text	<p>It says "Select one" yet there are no choices listed?</p> <p>Can we make the type "Text" and ask them to specify the settlement name, not only for the camp, but for all categories (city/town, village, camp, informal settlement, other)?</p>
What type of shelter does the household live in?	Select one	<ul style="list-style-type: none"> • Permanent/ finished concrete or burnt brick masonry house or apartment • Semi-permanent/ Tukul or other type of mud brick/adobe shelter • Emergency/ Rakuba – shelter from natural materials/ Tent/ other type of emergency shelter made out of plastic sheets and natural materials • Makeshift/ improvised shelter • Unfinished/ non-enclosed structure building • Collective/ public buildings – e.g., school/ communal shelters made from plastic sheets and poles/ Rubb Halls, etc. Shelter • Tent • Emergency Shelter • None (sleeping in the open) • Other (specify) • Prefer not to answer 	<p>I understood this year all interviews will be in person, therefore, since this question is observational, we can also include pictures for each of the shelter types so there is more clarity for enumerators.</p>
In total, how many rooms are there in use in all the shelters the household occupies (excluding the toilet, kitchen and store if any)?	Integer		<p>This is a way to approximately estimate the size of the shelter once the number of rooms is cross referenced with the shelter type.</p>

- We will be updating the **ActivityInfo user list** during the course of next week and in time for the **training on March 31**.
- Two separate forms in ActivityInfo
- One for **targets** related to **5W dashboard**
- The other **people reached** related to **achievements dashboard**
- The two forms are linked, and **if you do not enter your planned targets** in the first form, **you will not be able to report on achievements**
- This is to simplify achievement reporting as the form will be **prepopulated** based on the target information you provided. You only need to enter target once (although you can edit them as many times as you wish/need to)
- **Indicators have been streamlined across HRP, CRP and ERP** - so there is only one system for all of these response plans targeting all population groups - IDPs, Refugees, Returnees and Vulnerable Residents.

To ensure partial kits are not reported as full kits, you will have to **specify the quantities of each item provided** (# of blankets, # of plastic sheets, # of jerry cans, etc.)

Indicators:

- # of HH that received NFI kits
- # of HH that received emergency shelter kits (ESKs)
- # of HH that received tents
- # of HH that received construction materials
- # of HH that received durable shelters
- # of HH that received cash/vouchers for emergency/improved shelter
- # of HH that received cash/vouchers for transitional/durable shelter
- # of site maintenance activities

Benefits of CB Construction:

- **Cost-Efficient** - leverages the capacity of the affected populations - whereby we can reach more with less
- **Low-tech** - does not require any specialized equipment or skilled labor
- **Decentralized/ Easy to Scale Up** - households producing bricks and building houses in parallel - thousands of shelters could be constructed at the same time
- **Builds Self-Reliance and Resilience** - reduces dependence on aid, provides beneficiaries with new life skills, increases ownership and ensures future maintenance of the shelter
