Restrict consumption by adults in order for small children to eat?

Reduced number of meals eaten in a day?

Food Consumption Score

First ask the question: what type of food did you and other people in your household eat in the past 7 days? Discuss with them. Then ask them category by category what food groups they ate in the last 7 days and how many times the household ate each type. We do not need how many times a day each food type was eaten. If they ate bread 3 times in one day, it counts for one. If they ate tubers every day for 7 days, it counts for seven.
