

# KEEP YOUR SHELTER CLEAN

Recommendations to minimize the spread of **COVID-19**

Keeping your shelter clean will help reducing the spread of the virus

Before cleaning the shelter, wear a mask or garment over your mouth and nose

The person that is physically distancing from other family members should only clean his/her room

Do not dry dust any surface of the shelter. If the virus is on the surface you may be spreading it

Wet a cloth with clean water and soap to clean the surfaces

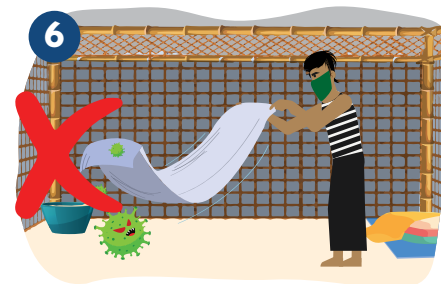

Do not dry sweep the floor as you may be spreading the virus

If you have cement flooring, mix some laundry soap in a bucket with water and wet the floor; then sweep with a cloth or brush. Let it dry completely

If you have sand flooring, spill some water on the floor and wet the brush before sweeping the floor. Sweep gently trying not to lift sand and dust. Let it dry completely

If you have a tarpaulin or fabric on top of your floor, clean it when dirty. Do not shake the tarpaulin before washing

Wash the tarpaulin outside the shelter, close to a drainage channel. Wash it with laundry soap and clean water and rinse it. Sun dry the tarpaulin hanging it outside your shelter

Clean the shelter regularly and at least every week

All kind of humanitarian aid is free. No sexual or other favor can be requested in exchange of humanitarian assistance. Any case or suspicion of sexual exploitation and abuse by UN or humanitarian workers can be reported to the complaint desk.
