Note related to winterization:

Data set and projections of target population

Table of Contents

Main findings

Despite the difficulty to know the exact population baseline and need assessments, the winterization is targeting **between 7.2% to 13.3% of IDP registered population**[1] depending on type of items and location. Part of the population of concern is actually living in NGCA but realistic projection could not be included in this document.

Method of calculation

The registered population in 2015 is over 1.4 million IDPs who registered due to displacement and also for other considerations. In parallel, an extract from MoSP database[2] and based on renewal/extension of IDPs' certificates has shown that 753,759 individuals are registered, a figure used here for triangulation of population baseline. The triangulation was done on very conservative manner in order to not mislead and create fake needs and potential duplication.

---

[1] Based on Ministry of Social Policy of Ukraine official IDP registered population of 1.4 million.

[2] Potentially the extract is not reflecting the entire population baseline and the exact confirmed IDPs population is higher. In same time cluster partners reported in Kharkiv that around 70% of interviewees (out of pensioner caseload) did confirm their stay in Kharkiv and Kharkiv oblast.

In parallel, winterization should also, in general, take account of feasibility in terms of capacity for distribution and also data collection/beneficiaries identification. Such statement leads to get a disaggregation of population between in GCA and NGCA[3].

In NGCA and due to the tremendous challenge for security and access, no educated guess could be done realistically feasible until now.

For GCA, the following paragraphs aimed at summarizing key figures for IDP targeting especially focusing on Northern Donbas subnational cluster area of intervention.

Calculation of need has been made using the Shelter Cluster/REACH Shelter Assessment, data for which was collected May-June 2015. Key indicators of reported need for non-food items relating to winter and access to fuel and sufficient heating are used here to project % and therefore numbers of displaced families in need of winter assistance.

Data is broken down to a 'clustered raion' level to assist with targeting of localities, given disparities of need between areas.

---

[3] In GCA, usually IDPs are the population of concern, where in NGCA population of concern could also include returning IDPs and also affected population.

Projection of target population- IDP families

Non-Food Items
