

STANDARD SHELTER KIT

#	DESCRIPTION	Units	Comments
1	Tarpaulin, woven plastic, Width 4 m Length Sheet of 5 m. Weight 170g/m ² +/- 5%, plus 10% for the reinforcement bands under ISO 3801.	1*	*2 units recommended for self-settled population that would have to build an emergency shelter.
2	Polyester rope, 12mm diameter, 50 meters, in roll.	1	
3	Hoe	1	
4	Pickaxe	1	
5	Shovel	1	
6	Nails, 1 kg. steel, 3 inches long (75 x 3mm), to be supplied in sealed package.	1	
7	Wooden stick (0.04 x 0.8 x 6 m.)	1**	**4 units recommended for self-settled population that would have to build an emergency shelter.

LIGHT SHELTER KIT:

For displaced population prone to multiple displacements in the areas where the standard shelter kit can not be distributed for access constraints.

NOTE 1: Considering the different situations of the population in need of shelter assistance and the dynamic situation of them, close monitoring of the way the population is using the shelter kits is necessary.

A revision of this kits will be done according to the findings from the post-distribution monitoring results.

Light kits are considered a temporary measure for the population that can not be reached with standard kits due to access constraints. In the areas where the standard kits could be distributed, this is the recommended solution.

NOTE 2: Households with 6 or less members will receive 1 shelter kit. Households with 7 and more people will receive 2 NFI kits. When possible to conduct a more detailed assessment, households with 7 and more will receive the items according to their number of members.
